INSTRUCTIONS | Stand Up Paddle Board (305)

1 Unpack Your Inflatable SUP Set

Roll out the inflatable SUPboard completely flat with the Non-Slip EVA Foam Deck side facing up.

2 Unlock Valve for Inflation

Find the high pressure inflation valve near the bottom of the board. Twist the cap counter clockwise to detach and access the center valve pin. Press the center pin once to pop it up slightly. Now the valve is in "open" position for inflating .

Always keep the center pin in "close" position and screw the cap clockwise to block air outflow when in use.

3 Pose

Connect pump and start inflating.

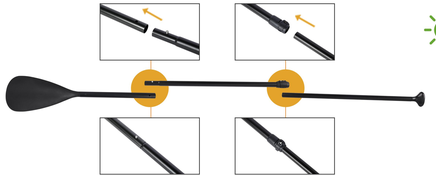
4 Secure air pressure

When PSI monitor reaches a desired level, please detach the hose from the valve. Press the center valve pin down to "close" position and screw the cap clockwise to secure are pressure.

5 Attach Tracking Fin

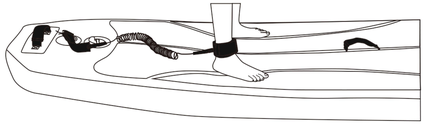
Once the board is inflated, flip over the board facing down to attach the tracking fin.

Put fin base into fin box from the wide inlet. Push the fin down. The fin base will slide to the end of box at the same time. Turn the screw to secure fin firmly.



6 Assemble Aluminum Adjustable Paddle

To assemble the paddle, hold the button in while sliding the pieces together until they click into place. The last section (top) of the paddle is adjustable. To find the ideal height for your paddle, start by building the paddle so it is 6 inches taller than your own height.



7 Paddle Safety Leash

Then attach the other end of the safety leash to the safety D-ring by pulling the inner rope through the ring and secure in place with the Velcro tape.

8 Deflate Without a Manual Pump

When packing your inflatable SUP, remove all detachable parts. Then lay the board facing up on a smooth surface. Clean any unwanted debris, especially around the valve area. Open the valve cap and press the center pin to start releasing air.

There will be an initial burst of air, but will turn to slow release. When the air outflow slows down, start rolling up the board from the opposite end and fold it into a packing size. When packing, lock the valve cap to protect the center pin and elongate inflatable SUP lifetime.

9 Deflate With a Manual Pump

Remember to step on the pump securely, to prevent slipping.

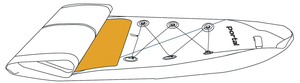
BOARD FOLDING STEPS

The board storage bag is designed to allow you to get your board into the bag as easily as possible with minimal folds. Do not roll up the board too tight when storing it while deflated.

Follow the diagram below for the best folding procedures.

Step 1:

Step 2:



Step 3:

DESIGNED, BUILT AND TESTED IN THE WILD, FOR THE WILD.

Warranty

Your Portal paddleboard is covered by a 12-month quality warranty.

Safety Tips

Paddle sports can be a dangerous and physically demanding activity. Users of this product should understand that participating in stand-up paddling can result in serious injury or death.Observe all applicable watercraft laws, and use common sense.

We recommend that you inflate your inflatable stand-up paddle (inflatable SUP) board between 13 and 15 PSI. Under inflating the SUP can cause stability issues along with your SUP folding during use.

As you approach the weight limit, you should inflate the SUP closer to the upper PSI limit.Paddle boards can hold max 300 pounds.

Safety Check List

- Check your board and equipment before going in the water.
- Always paddle with others.
- Always wear a leash attaching you to the board.
- Wear a Coast Guard approved personal flotation device.
- Always wear protective clothing.
- Always paddle in safe conditions.
- Be aware of changing weather conditions.
- Avoid paddling in off shore wind or windy conditions.
- Do not exceed your paddling ability; be aware of your limitations.
- Do not use alcohol or mind altering drugs prior to or while using this product.
- To keep the board in the best possible condition, it is recommended that you always deflate then fold up the board and put it in the protective bag when it is not in use.
