#### Bian Stone far infrared warm compress physiotherapy

Warm compress therapy is an important method in stone therapy. Its origin is to use baked hot stone to rest on the affected part of the disease or massage, which can relieve pain and treat the disease. This therapy is called stone warm compress.

Electrothermal stone therapy is a kind of warm compress, i.e. current is used to heat the stone through a special instrument. The far infrared electromagnetic wave radiation heat energy generated by the heated stone can be conducted in channels and collaterals to achieve the purpose of treating various diseases. It is a clever combination of traditional stone therapy and modern high technology. At the same time, stone has a strange energy field, which acts on the surface of human skin to generate extremely far infrared radiation with extremely wide frequency band and far infrared frequency ranging from 7 to 20 microns. Every time stone rubs the human body, it can generate ultrasonic pulses beneficial to health. The average number of ultrasonic pulses can reach 3708, with the frequency range of 2-2 million Hz. Therefore, stone is the first of all materials.

Dr.Rock series Bian Stone far infrared warm compress physiotherapy has similar effect to that of warm compress therapy. It is a compound therapy of stone hyperthermia and massage, and has excellent curative effects of promoting blood circulation, removing blood stasis and dredging channels and collaterals. After thousands of years of practice, warm compress therapy has proved to have a wide range of health care functions. Clinical evidence shows that electrothermal stone therapy has good effects of warming channels and dredging veins, eliminating arthralgia, relieving spasm and sedation, and can be used for various pains, relieving muscle spasm, digestive system diseases, and etc. It also shows great advantages in beauty treatment, weight loss, insomnia adjustment and fatigue elimination.

#### Massage impact therapy

##### Impact on skin and subcutaneous tissue

Loosening thickened connective tissue and fascia, breaking the barrier of releasing fascia contraction, removing adhesion and internal scar tissue after injury or surgery, increasing venous return and lymphatic circulation, and improving muscle extensibility. Especially when muscle spasm, stiffness and restriction occur, the reflex contraction of muscle fibers is punctured, and the range of motion is increased by relieving stiffness of joints.

##### Influence on central and sympathetic nervous system

Stimulate local muscle receptors to relieve pain and help relax, without causing pain or inflammation.

##### Influence on muscle, preserved muscle, arthralgia

The most common causes of muscle pain are trauma, overuse, tension or tension. After injury or trauma occurs, impact therapy can accelerate the healing of inflammatory regions. Similarly, when some parts of the body are overused or under tension, impact therapy can accelerate blood circulation in affected parts and reduce potential tension.

##### Exercise rehabilitation

Relaxation physiotherapy is helpful to recover the body from the pressure of strenuous exercise and to adjust and rebuild training. Rehabilitation will remove metabolic waste and better nutrient cells, normalize and enlarge tissue elasticity, treat trigger points and accelerate wound healing.

##### Recovery after operation and injury

After trauma or surgical repair, the stimulation of impact therapy can eliminate faults and avoid formation and adhesion of scar tissue during the repair process of inflammatory activity of the body.

##### Relax

Impact physiotherapy can repair the body, increase the patient's body comfort and improve the overall well-being.

#### Indications and contraindications

Dr.Rock series deep penetration can relieve pain, bursitis, muscle spasm, neuralgia and other musculoskeletal diseases caused by joint sprain in a short time. Almost all soft tissue diseases are related to trauma, overuse of muscles or abnormal posture. Dr.Rock can be used to treat scar tissue involved in most of these diseases. When using Dr.Rock, excessive pressure and long-term physical therapy should be avoided. Sensitive areas such as head, face and cervical vertebrae should also be avoided. Physical therapy should be stopped immediately if there is inflammation, swelling or pain aggravation. The current research is about the impact of vibration training on specific medical diseases. This is likely to reduce the types of contraindications mentioned above. Practical experience shows that in many cases, the combination of vibration training with physiotherapy program is also a physiotherapy suggestion. This must be done on the advice or accompanied by a doctor, expert or physiotherapist.

### 按摩冲击理疗

#### 对皮肤和皮下组织的影响

使增厚的结缔组织、筋膜松解下来，打破即释放筋膜收缩的障碍，去除损伤或手术后的粘连和内部瘢痕组织，增加静脉回流和淋巴循环，提高肌肉的延展性，特别是当肌肉痉挛、僵硬和受限的情况下，刺放肌肉纤维的反射性收缩，通过缓解关节僵硬增加运动的范围。

#### 对中央与交感神经系统的影响

刺激肌肉局部受体，以减轻疼痛和帮助放松，不会产生疼痛，不会导致发炎。

#### 对肌肉、肌腱、关节痛

最常见的导致肌肉疼痛的原因是创伤、过度使用、紧张或张力。在损伤或创伤发生后，冲击治疗可加快炎症区域的愈合速度。同样的，当身体的某些部位过度使用或有张力时，冲击疗法可以加快受影响部位的血液循环并减轻潜在的紧张关系。

#### 运动康复

放松理疗有助于将身体从剧烈运动的压力中恢复，并有利于调节和重建训练。康复会去除代谢废物并更好的营养细胞，使组织弹性正常化和最大化，理疗扳机点以及加快伤口的愈合。

#### 手术和损伤后的恢复
