Troubleshooting Frequently Asked Questions

1.Failed to connect device, what should I do?
Double check that phone is connected to a 2.4GHz Wi-Fi band. Confirm the entered Wi-Fi password is correct. And the device is in setup mode(indicator light blinking).

2.How to connect to 2.4GHz Wi-Fi ?
Most smart home devices only support 2.4 GHz Wi-Fi band. Usually the 5 GHz Wi-Fi band has '5'or '5G' in its name, do not connect to that one. You can also log into your Wi-Fi router's admin page on web browser to turn off 5 GHz Wi-Fi. Or please find another phone device. Turn off your current Wi-Fi router, then use the phone as a Wi-Fi hotspot, set the hotspot name and password exactly the same as your main Wi-Fi router. Keep both phones and your smart device close together.

After it is connected, turn off your hotspot and turn on your main Wi-Fi router, the smart device will connect to the Wi-Fi router, as they are the same name and password.

3.The Smart Wi-Fi device appears offline, what should I do?
Check the electric power and make sure that it's power on. Make sure you are connected to the same Wi-Fi network to control it locally. Reset the Smart device and reconnect it to your Wi-Fi network.

4.How do I pair the Smart Wi-Fi LED light strips with Amazon Echo?
For pairing instructions, please register account and follow the installation steps inside app.

For tutorial video, please search "How to set up a music smart light strips" on YouTube.
