CLEANING HEADS

Clean in Place System (CIP) - Manual cleaning of equipment can be time consuming, costly and down right unproductive. The Talos CIP system is a go-to solution. Our system is typically used to mount to a wall or any desired location for a quick and easy way to clean your draft beer lines or any other beverage applications. Our system can easily be placed in any walk in-cooler or desired locations. To clean the lines, the keg couplers are removed and attached to the ring-main socket. You would then cycle water through the lines followed by solution and again water to rinse and end the cycle.

Plug+Barb
U Type 1101608
