Very Important Tips

1. Soliom camera can only be set up with 2.4g Wi-Fi network. (It's ok to use Cell phone 4G data to live viewing it after the camera was set up with 2.4g Wi-Fi network firstly.)
2. You may possibly need a Wi-Fi extender if your Wi-Fi signal is weak around the yard where you want to install it.
3. Please install the micro sd card when the camera **powered off**. (Micro sd card is not provided in the package)
4. Please charge the battery at the bottom of the solar panel using the provided USB cable, it usually takes up to 10-13 hours to fully charge it. And then attach the solar panel with battery box to the camera using the screws and tools provided in the package.
5. Make sure the distance between your phone,router and the camera is no more than 1.5 feet when you're ready to pair the camera. Ensure that the Wi-fi signal strength on your phone is good.
6. The PIR range is 18 feet around,the recommend camera install height is 9 feet around.To avoid too much false alarms, we suggest you do not install the camera with nearby bushes,shrubs, grasses and tree leaves coming into the PIR range.
7. If you install the camera on stucco,brick or concrete surface,please mark 4 holes matching the drill template and then use a drill driver to drill into the wall and insert the expansion screws to hold the camera tightly

1 x Position Paper

In-App Setup

Make sure the distance between your phone,router and the camera is no more than 1.5 feet when you're ready to pair the camera.Ensure that the Wi-fi signal strength on your phone is good.

1. Download the App (works only with iOS & Android devices)

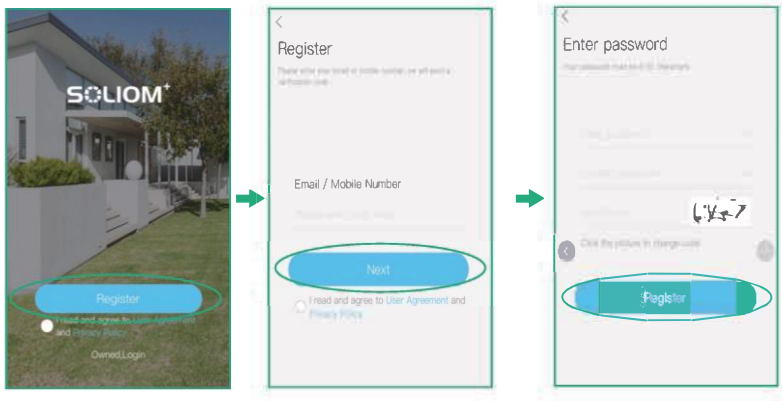

Please locate "Soliom+" in your Google Play store or App store to download the Soliom+ App.

2. Register an account

Open the App and register your account with your email address.

- (1)Open the app and register your account with your Email address and it is recommended to verify your account from email so that you can retrieve password of your Soliom account in case.
- (2)Set a password for your account and make note to remember it. (Password is 8-32 digit or alphabet combination)
- (3)Please click "Allow" or "Agree" on all access when you download soliom+ and during the process of setting up your account so that the Soliom+ can have full access to your camera and phone. otherwise, your camera may have less function or incomplete setups.

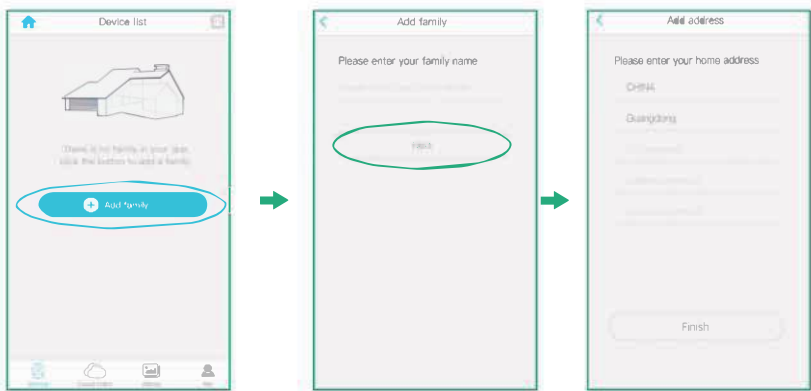

3. Set up the installed location

Click "Add family" and then input your desired family name, click "next step" and then input required information, and then click "finished" to save it.

please pay attention to **choose your right "Country/Region"** so that you can connect the camera smoothly later and get proper notifications from your correct region server

Note: The required fields are country and state.

4. Pairing the camera with the App

Please turn on your camera and you will hear the voice prompt "The camera is now ready to begin pairing" and Camera Blue LED blinks the same time, which means the camera is ready and waiting for pair up.

Note:

- 1) If the camera LED doesn't blink blue, which means the camera is not in ready to pair condition. Please power on the camera and hold on the reset button for 4-5 seconds and then release it when you hear "system reset" to reset your camera to default.
- 2) **Please connect your phone to the 2.4Ghz wifi firstly before you pair the camera, make sure your router password in mind before you start the pairing process.**

- 1) Click "Add a device" and then choose "Setup device", click "Yes", when you hear the following voice "The camera is now ready to begin pairing".

- 2) When your phone or tablet connected well with your 2.4G wi-fi and you allow the access of using the location for the app, your wi-fi name will be shown here automatically. Otherwise please check your wi-fi list from your devices and you have to turn on the location services for the soliom+.

In-App Setup

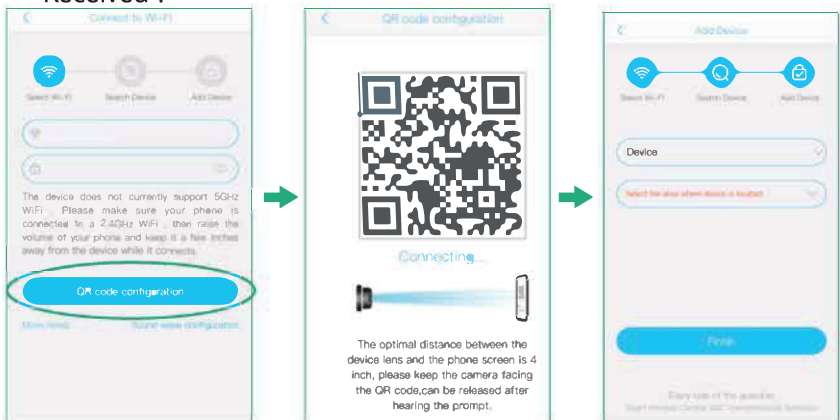

- 3) Input the CORRECT WiFi password of your router, if you input a wrong password you will not be able to connect it successfully. Click the eye icon to double confirm the password you entered correct

Your Wi-Fi name will be shown here automatically
Click the icon to double confirm the password you entered correct

Method 1: QR code configuration

- 1.1 Click the "QR code configuration", hold **the QR code showing on the mobile phone** in front of the S600 camera lens, and then you will hear the following voice "Pairing Information Received".

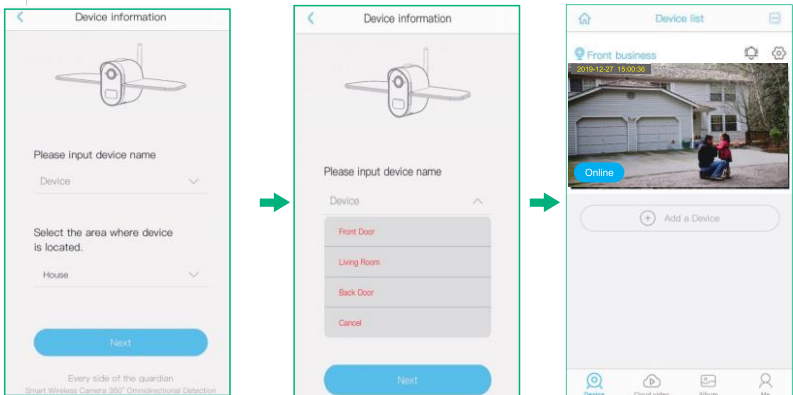

Method 2: Sound wave configuration

2.1 Enter into the "search device" page, make sure to turn up your phone's volume to the Maximum, you will hear the following voice: "Pairing Information Received".

3) You have connected the device to the App successfully. Choose a name of the devices from the drop-down choice, or you can modify one that you want. and then select the area where device is located. (you have to choose one or you cannot connect the camera to the app)

- 4) Congratulations! You have connected your camera to the App successfully, now you can live view the camera on your phone anytime and anywhere.

If you're unable to pair the camera, please check below suggestions:

1. Make sure your phone is connected with your 2.4G Wi-Fi. When your 2.4g Wi-Fi connected correctly to your phone, your Wi-Fi name will be recognized by the camera and pop-up on the Wi-Fi input page automatically.
2. Let your phone to forget your 5G Wi-Fi connection from your Phone Wi-Fi list to avoid proity pick up.
3. Try to avoid your phone screen too light or too dark so that camera can read the QR code clearly without reflecting light.
4. Put your phone, camera and router within 1.5ft to get a strong Wi-Fi signal strength.
5. If you use sound wave method, make sure your phone volume is turned up and your router ID + password no more than 32 digits.
6. Enable your router DHCP option and set your router to dynamic IP addressing to avoid conflict with your other wireless devices for one static IP address.
7. Reboot your router to reallocate your IP address and refresh your network.
8. Power on the camera and hold on the reset button for 4-5 seconds and then release it when you hear "system reset" to reset your camera to default.

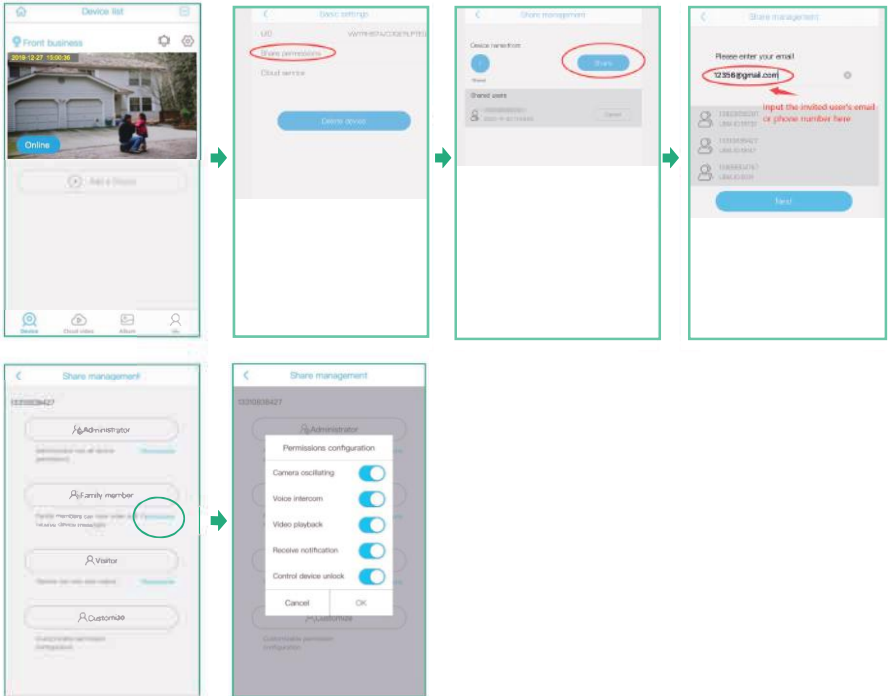

5. How to reset camera

Press and hold the reset button for 4-5 seconds to reset the device. You need to release the button when you hear "system reset".

6.How to Share Your Camera with More Users

When you can use your camera properly. You can start to share your camera to your friends or family members. click” ⚙️ “and choose "share permissions". input the account that you want to share with. Choose a permissions from Administrator, family member, Visitor, Customize

You can Customize the permissions and turn on or off every permission as you wish by clicking the blue icon"permissions".

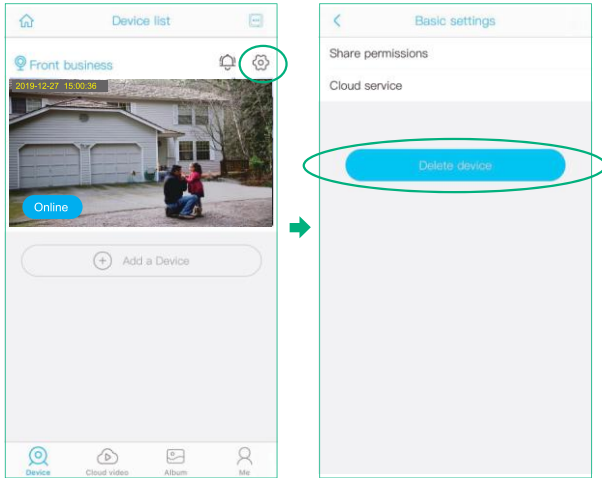

Note:

Please let the invited user to register a Soliom+ account using their email first and then start to share according to the instructions above.

7.How to unbind your camera

Please do not forget to unbind your camera from your App when you plan to return the camera, to avoid any personal information disclosure risk.

And unbind your camera as following steps, click" ⚙️ " and then choose "delete"

In-App Setup

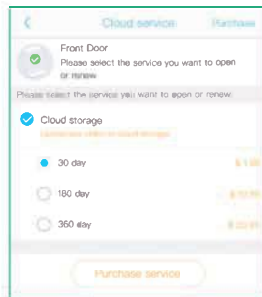

➤ Push Mode

This icon indicate that the push mode is on, click it to turn off push mode and then you cannot receive any notifications. If you want to turn on or off the sound of notification, please refer to page 27. **Note: When you turn off the notification, the motion triggered events will keep recording to cloud or micro sd card as you set.**

➤ Cloud storage

The motion detection video clips will save in the Cloud. Cloud video length is 10-30 seconds defaulted and free for 30 days. And you have to pay for the service per month or other cloud service. You can choose a service from the soliom+ provided to purchase.

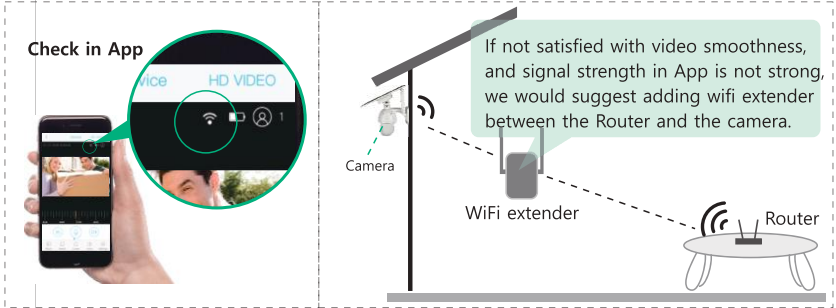

How to change cloud video length:

Go to live view mode and find "Device setting" gear icon- go to "Active time" - change the time as you want.

P.S.: When you set the active time, the spotlight will turn up with the same time length when motion was triggered at night.

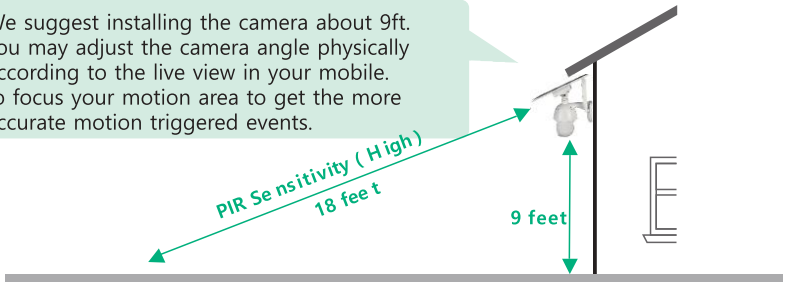

Physical Installation

1 Check your camera signal strength

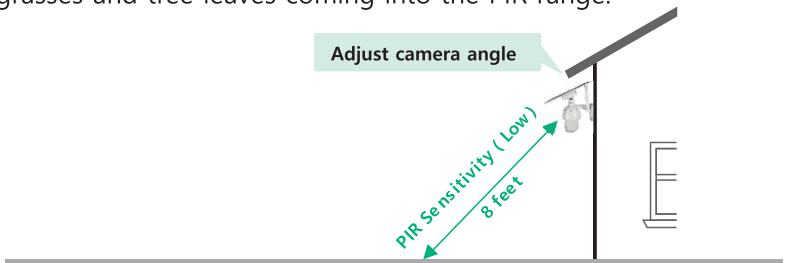

2 Recommended height to install the camera

We suggest installing the camera about 9ft. You may adjust the camera angle physically according to the live view in your mobile. to focus your motion area to get the more accurate motion triggered events.

If your camera get numerous motion alerts unexpected

- 1) Please adjust your camera installation angle a bit down to focus the motion area.
- 2) Please change your PIR sensitivity to Low to reduce the PIR sensitivity.
- 3) Do not install the camera with nearby bushes, shrubs, grasses and tree leaves coming into the PIR range.

Physical Installation

- 4 Stick the position paper on the wall where you want to install the camera. drilling the 4 holes according to the 4 red dots on the paper and then fix the bracket using the expansion screws.

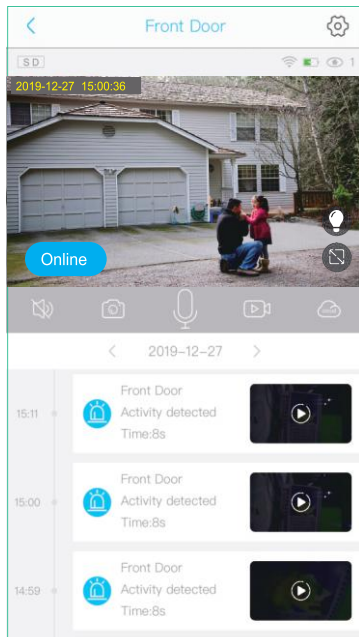

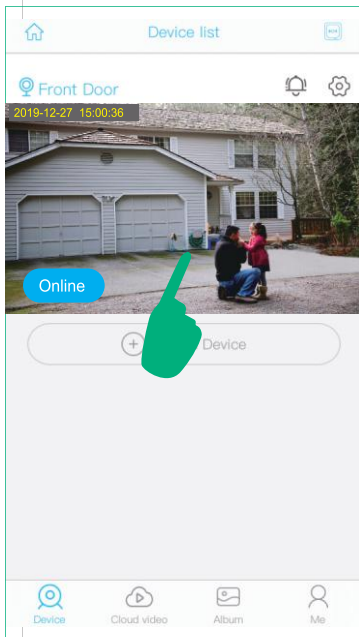

Point the antenna to sky, do not point it to earth. The antenna is not waterproof upside down.
