

# ZEROXCLUB

## Car Rearview Camera

## USER MANUAL

*Thank You for Buying ZEROXCLUB Product.  
Read This User Manual Before Installing  
and Using this backup camera.*

*Please keep these instructions or write down our email:  
**sales@uszeroxclub.com**,  
so you can find us if you have any questions.  
We will be there for you forever.*

## Installation Safety Precautions

- Use the correct size cable and connector to power the camera.
- Ensure the power supply circuit has circuit protection.
- Connect the backup camera to a 12-14V DC circuit only.
- Use insulated tools when working with power supply.
- Use correct safety equipment when working at elevated levels.
- Ensure correct polarity of 12V DC power supply to the camera.  
Red = Positive. Black=Negative.
- Excessive heat can be caused by a loose connection.

## Installation

ZEROXCLUB reversing camera installation:

The ZEROXCLUB license plate backup camera kit includes:

- 1 x Reversing camera
- 1 x 4ft power cable
- 1 x 25ft RCA cable
- 1 x Instructions manual

### A: Camera install

- (A1) Camera power wire needs to connect to your car's reversing light's power positive.
- (A2) Black wire connects to metal or ground wire. When wiring the ZEROXCLUB camera system as a reversing camera, the power supply for the camera must come from a reversing lights. The power source can also be from the constant 12V power source, and the camera will always be on.

### B: Trigger and video wire install

- (Trigger wire is the small red wire attached to 8mm video wire)
- (B1) Connect one end of the video wire to the camera.
  - (B2) Run the wire through the body of the car, either under

- the carpet, or over the headliner.
- (B3) Connect the other end of the video wire to the monitor.
- (B4) Connect the trigger wire near the camera to the same power source as the camera, the car's reverse light's power positive.
- (B5) Please connect the other end of the trigger wire to the auto-switching input to the monitor, it may be labeled "reversing" on some stereos.

Note:

1. The actual measurement of 6mm diameter screw, can be installed at a maximum distance of 232mm and minimum distance of 166mm.
2. Please connect the wire tightly.
3. If the camera is connected to the fuse box, you need to pay attention to the loss of power in the vehicle battery, a prolonged loss of power will affect the start of the vehicle.
4. If the voltage is too high, the long-term work will lead to damage for the camera.
5. The camera is CVBS, please check if your head units is compatible with CVBS.
6. If you don't need the guide lines, you can cut the green wire/loop. Once the wire is cut, it can't be connected again, so please make sure you really don't need it before cutting it.

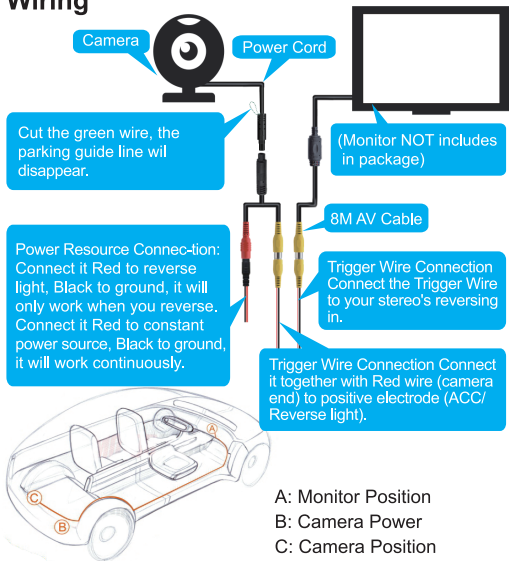

### C: Test

With the car in reverse, the reverse lights should turn on - you may need your key on for this. The power from the reverse lights will power up the camera, and should trigger the monitor to display. If the monitor does not automatically switch to the display then you will need to adjust a setting in the menu. Look for "camera input" or "reversing" or "video input" in the menus.

## D: Help

Please keep these instructions or write down our email: [sales@uszeroxclub.com](mailto:sales@uszeroxclub.com), so you can find us if you have any questions. Also you can find this on the QA on the product page. We will be here for you forever.

## Wiring

## Trouble Shooting

Camera gets foggy	Contact our Customer service email: <a href="mailto:sales@uszeroxclub.com">sales@uszeroxclub.com</a> for a replacement.
Camera stops working	Contact our Customer service email: <a href="mailto:sales@uszeroxclub.com">sales@uszeroxclub.com</a> for a replacement.
The image on the screen is blurry, flickering/flash or has horizontal or vertical strip	Please check all your power and video connections. Make sure the voltage is 12 - 24V DC.
Has a problem of damaged or missing accessories.	Please contact us via <a href="mailto:sales@uszeroxclub.com">sales@uszeroxclub.com</a> for a free replacement.
Get an "!" on the screen	If you check everything is right and it cannot shows a normal image. This means that the camera is not compatible with your head unit. For this issue, please contact us via <a href="mailto:sales@uszeroxclub.com">sales@uszeroxclub.com</a> .
There is a mirror image	This camera is designed for reversing, please install the camera correctly in the back of the car. If it is installed in the front of the car, it will appear a mirror image. If you have installed it correctly and it still appears mirror image, please contact us via <a href="mailto:sales@uszeroxclub.com">sales@uszeroxclub.com</a> .
The led light is on and it shows the live video but stops after 5 seconds.	Contact our Customer service email: <a href="mailto:sales@uszeroxclub.com">sales@uszeroxclub.com</a> for a replacement.
Get intermittent images	Contact our Customer service email: <a href="mailto:sales@uszeroxclub.com">sales@uszeroxclub.com</a> for a replacement.
The camera shows a black and white jagged image then a black screen with "no signal"	There has a problem with the head unit on your car. Test the camera in another car to see if the same situation occurs or send a picture of your issue to <a href="mailto:sales@uszeroxclub.com">sales@uszeroxclub.com</a> .

No image	There was no image unless used with constant 12v power. (When used that way the led lights also stay on. )If you want to use it only when reversing. But wiring power from one reverse light is not enough to make the camera work. You can run a power wire from both reverse lights which had enough current to turn the camera on and show an image only when reversing.
No Signal	Try to connect the black wire of the power cable to the negative power of reversing light rather than ground cable. Check the yellow RCA cable of connecting the camera and monitor is tight, and turn the yellow RCA cable to see if the screen shows image. Check the car backup lights and make sure it can power the camera. Then run a second power line from your red wire in your dash to power the camera. Check if the LED light will bright up when you are reversing, If not, there is something wrong with the cable, please contact us at <a href="mailto:sales@uszeroxclub.com">sales@uszeroxclub.com</a> .

If you have any questions, please contact us via [sales@uszeroxclub.com](mailto:sales@uszeroxclub.com) with your Amazon order number and a picture/video to show the problem, it's very helpful for us to find out the solution as soon as possible.
