FCC Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Responsible for compliance could void the user's authority to operate this equipment. (Example- use only shielded interface cables when connecting to computer or peripheral devices).

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This equipment complies with Part 15 of the FCC Rules.

Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference received, including interference that may cause undesired operation.

FCC Radiation Exposure Statement:

The equipment complies with FCC Radiation exposure limits set forth for uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator and your body.

you have found. You can log in to the Alexa APP and go to the 'smart home' menu to see the name of the device.

11. FAQ

You can find the answers in FAQs of our website. We will continually update the questions which our clients concerning about. If you have more questions, please visit our website(www.gazingsure-security.com) or contact email(service@gazsecurity.com) or Facebook ([GazingSure](#)).

Q1: How can I reset the factory settings of my camera?

A1: Delete the camera from your list directly or press the reset button more than 8s under charging till you hear the sound, the factory settings of camera will be restored.

Q2: I have selected 2.4GHz Wi-Fi and input Wi-Fi password correctly, why does the camera still not connected to Wi-Fi?

A2:

- ① Please make sure the network you used in your camera and the phone are the same one.
- ② Please make sure your router open DHCP, you can log in the router setting and find the DHCP to check it closed or opened. If it close, then it will not distribute IP address to this IP camera, and it will fail.
- ③ Please make sure the network you used is 2.4GHz not 5GHz.
- ④ Please press the 'reset button' more than 8 seconds under charging to reset the camera if you want to change Wi-Fi.
- ⑤ Please access camera's setting to confirm its Wi-Fi signal, please make sure Wi-Fi signal intensity is over 80%.
- ⑥ If you choose Wi-Fi connection, please make sure the Wi-Fi signal connected to the camera is up to 80%.
- ⑦ If your camera can't connect well but your network is good, please take out your SD card and try again, may

the SD card is incompatible.

- ⑧ If the device connected to WIFI are excessive, it will cause the IP address conflict and fail to connect to Wi-Fi.
- ⑨ Please keep the camera at least 1 meter away from any wireless devices or metal in order to avoid wireless interference, including Wi-Fi routers and phones.
- ⑩ This camera just don't accept the special characters ~ ! @ # \$ % ^ & * () (including doorbell's name and password, network name and password)
- ⑪ If your Wi-Fi has admin password and tourist password, please use admin password to connect the camera.
- ⑫ Restart your smart phone to try again.
If your device is connected but offline now, please check the blue indicator, if it flashes slowly, means the camera is online but the network is not good now.

Q3: How to connect the camera to another router?

A3: First log in the APP to delete and reset the device, and configure the device again through the APP.

Q4: SD card cannot be recognized. After a period, video and cycle video cannot be recorded?

A4: Please check your camera's settings and make sure you set up the cameras to record videos on SD card.

There is something wrong with the compatibility of the SD card or the SD card itself if it cannot be recognized. Please check whether the SD card is compatible or not and whether SD card is damaged or not. Please format it first, and try it again. SD card in the camera is more easily damaged than in the other facilities because the SD card is reading and writing the videos all the time in the camera. If it still can't work, please change another SD card to use. It is suggested to use SanDisk special white security micro SD card, class 10 (legal), not over than 128GB. Incompatible SD card may cause can't connect network well.

It is recommended to insert and remove the SD card after power off the device.

Check if the SD card is under normal service conditions

and the format is FAT32. The APP shall suggest 'could not find SD card' under unstable network of the mobile phone or the device.

Using the advanced intelligent alarm push algorithm to ensure that the alarm message will not be frequently, but the camera will record all the alarm messages and videos.

Q5: The device is online and has an alarm event, but the mobile phone cannot receive the information?

A5: First confirm that APP allows notification in the settings of your mobile phone. And turn off "Power saving mode" of your phone.

If your phone is SAMSUNG phone, please click 'Settings' to allow the app to start automatically when your phone is turned on. Or you will not receive the APP notification. Under normal circumstances, when an anomaly is detected, a message will appear in the notification bar of your mobile phone. You should set a notification sound or vibration in your mobile phone.

In addition, when viewing the real-time video in the APP, you cannot receive alarm of the camera being viewed. Because the device defaults the camera being viewed indicating that the user is focusing on the monitoring video, and there is no need for an alarm.

Q6: Why I can't hear any sounds from my camera?

A6: The camera will record sound automatically, please turn on the sound icon if you want to hear sounds at live viewing. If you want to get two-way audio function, please remember to turn on two-way talk from camera setting.

Q7: Why my camera is so hot?

A7: It is normal for the camera to become hot, which is caused by the working of the LED light. It is a normal issue because of the LED lamp work. It handles temperature range between -4 °F and 140 °F (-20° C to 131° C).
