

Brake sensor installation instructions

Attention:

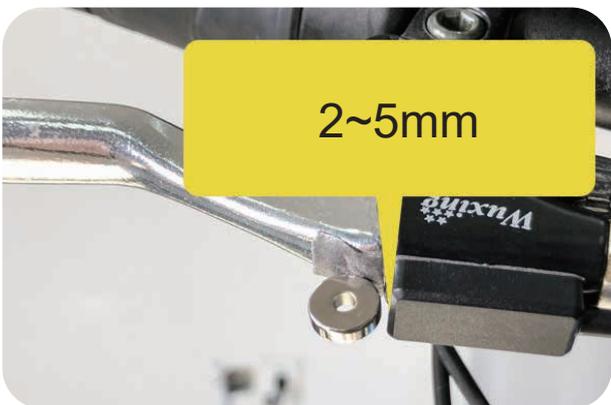

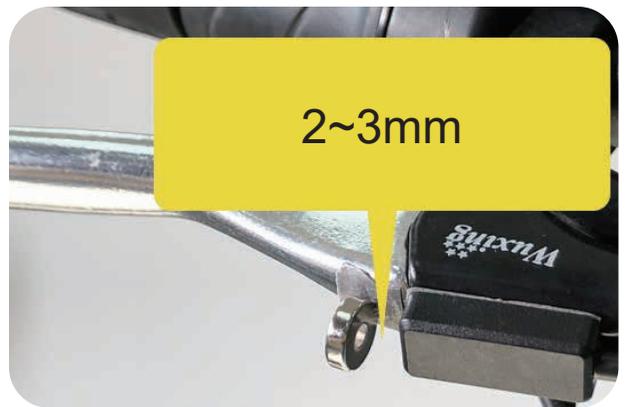

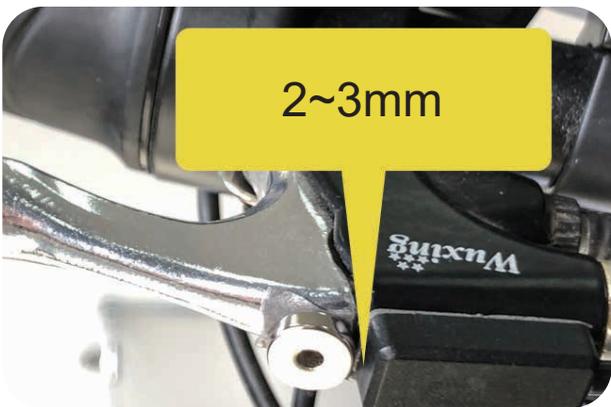

Please read this instruction carefully before replacing the battery, and prepare the needed tools.

1: Remove the 3M tape on the sensor and stick on the brake lever as photo (position can be adjustable)

2: Double check if the position is skew.

3 ways to install the magnet, see the photos, and the positions can be adjustable according to the result, the distance between magnet and sensor is 2-5mm.

Remarks:

The install way is not unique, the position and the distance both can be adjustable according to the different bikes and different brakes.
