Step 3: If there are files matched the condition in time scope ,it will display on timeline panel.

Step 4: double-click the device channel to playback record.

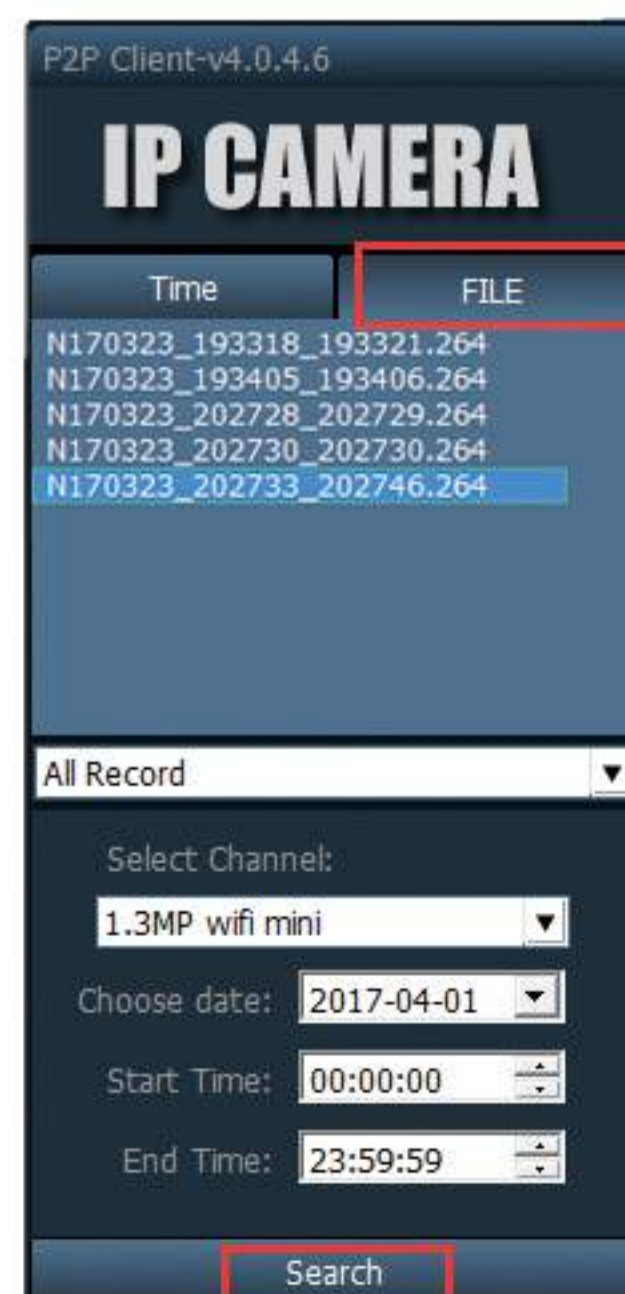

3-7-2. playback by searching file

Step 1: Choose the record file format and device channel

Step 2: Select the search time and click "search" button, the system will display the eligible record file in the device tree.

Step 3: Select playback window and double click record file to playback record.

File playback support the same record file playback in four windows at the same time.

3-8. Remote playback

Remote playback the timing video or alarm video stored in the SD card, select the channel, date, start and end time; Then click “search” to playback the videos which stored in the SD card (remote playback just can be successful as the device connected).

3-9. Parameter Setting

Before modifying the equipment parameters, please connect the related equipment, as shown in the figure below: Connected device.

3-9-1. Video

Video code: can set the Frequency and Video coding.

Video Param: Here can set the resolution, stream type, Bit rate, Frame Rate, Key frame interval, Bit rate control, Image quality of video.

OSD Setting: Set the device name and display time.

Note: if the device connection is hd, the resolution is the main stream, if the connection is the standard definition ,the resolution is the sub stream.

3-9-2. Image Setting

Wide Dynamic: As tick the box in front of “Wide dynamic”, it means the function open. Default is close.

AEmode: Exposure mode. Auto, indoor, outdoor optional. Default is Auto.

Imgmode: Image quality priority mode. Illuminance and Frame rate optional.

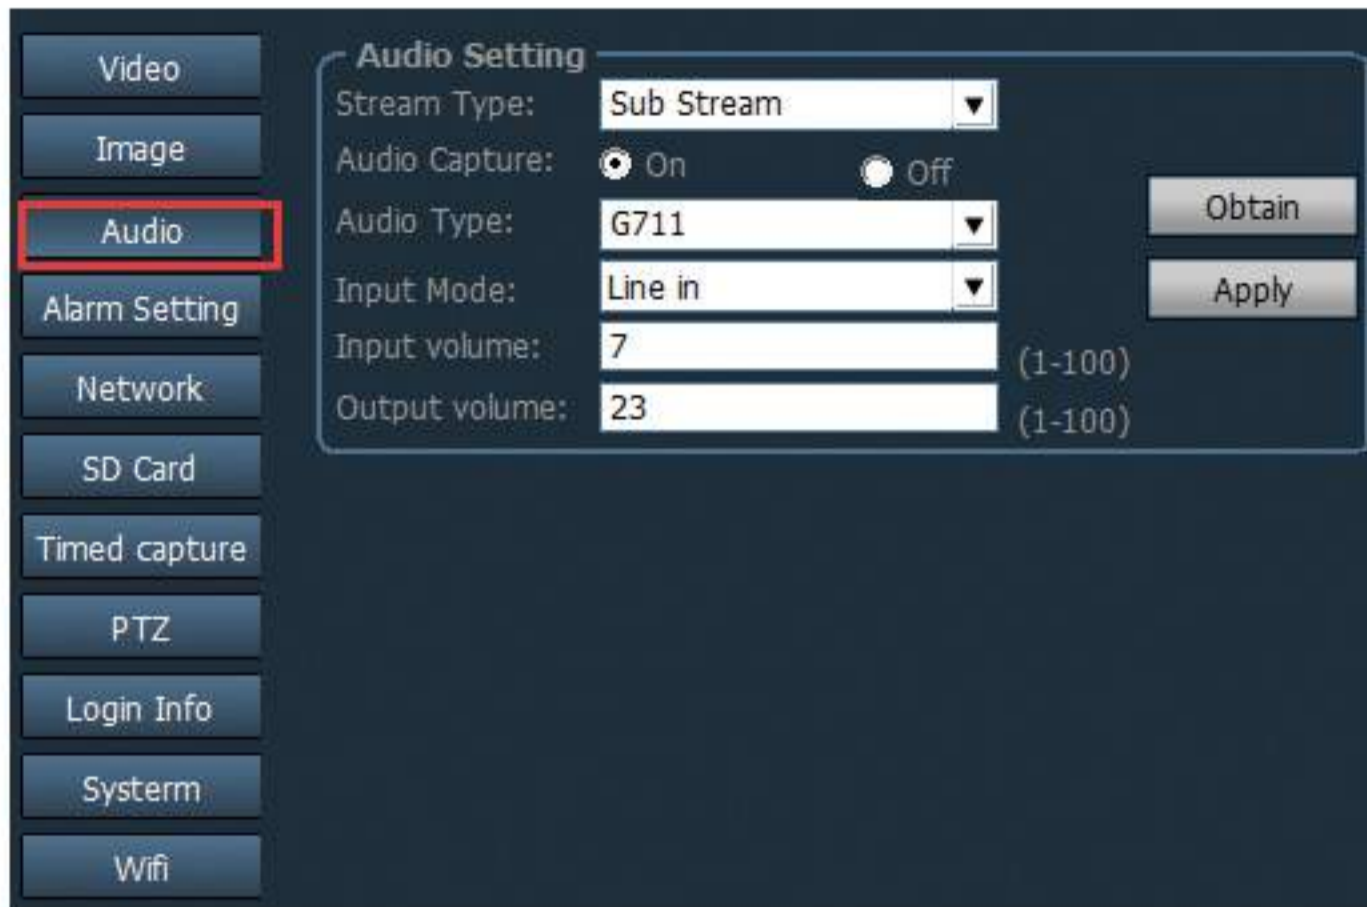

IR LED Control: Auto, on, off optional. If open, it will enter into black and white mode. Otherwise will go to color mode.

3-9-3. Audio

Stream type: Main stream and sub stream optional.

Audio capture : ON/OFF optional. Default is off.

Audio type: G.711 and G.726 optional.

Input mode: Line in, MIC optional.
If choose "Line in", the input/out volume is 15/95. If choose "MIC", the input/out volume is 80/95.

3-9-4. Alarm Setting

Motion Detection

Tick the box in front of Motion detection to open and close it.

Sensitivity: Low, Middle, High optional. Correspondent sensitivity is 25, 50, 75.

Sound Alarm

Sound Alarm: ON/OFF optional.

Volume range: 1~100 optional. Default is 50.

External Alarm: Open/close optional. (Note: just can use for the camera which support alarm function)

Alarm linkage

E-Mail Alarm and send with picture;
Save picture on the FTP Server;
Save video on the FTP Server;
Save picture on the SD Card;
Save video on the SD Card;

The screenshot shows the 'Alarm linkage' configuration window. It contains several checkboxes and dropdown menus. The 'E-mail Alarm and Send with Picture' checkbox is checked. Other options include 'Save Picture on the FTP Server', 'Save Video on the FTP Server', 'Relay Output' (set to 5s), 'Save Picture on the SD Card', and 'Save Video on the SD card'. There are buttons for 'E-mail Setting', 'FTP Setting', 'Apply', and 'Obtain'.

Email Setting

Take QQ email for example as follow:

SMTP Server: smtp.qq.com

server Port:465

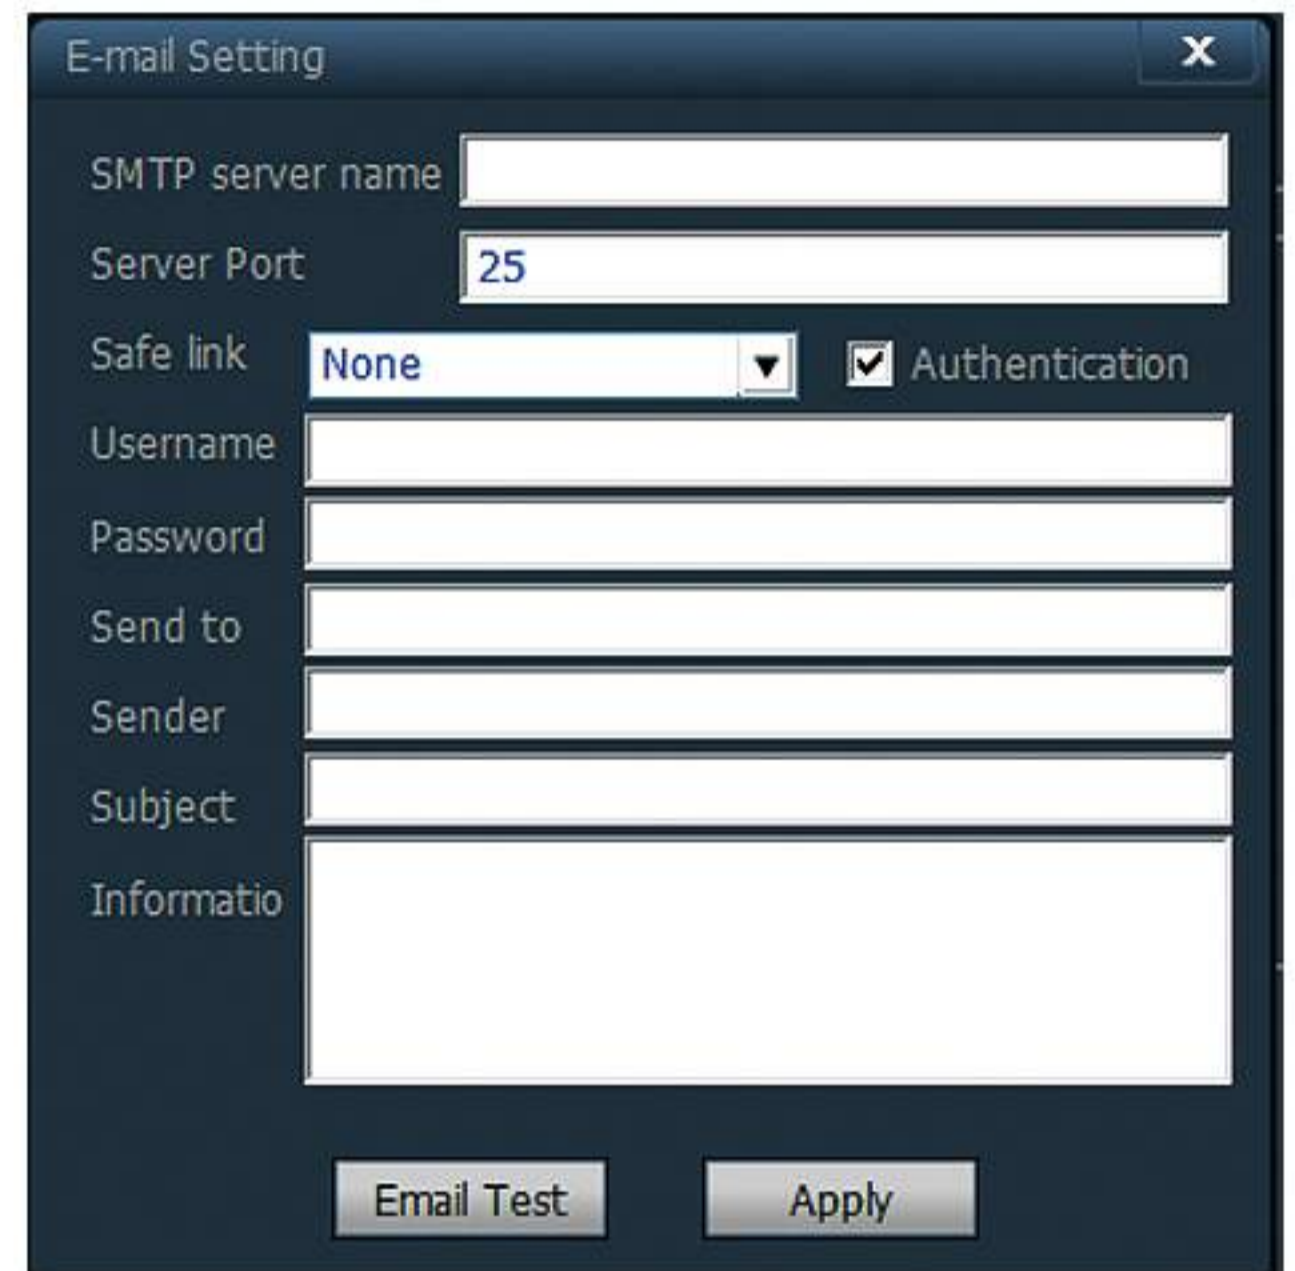

Encrypt Type: SSL

Username: fill the blank with your email address

password: the password of your email address

Sent To: fill this blank with the email address to receive the alarm snapshots.

Sender: Fill this blank with the Email address which send the pictures.

The screenshot shows the 'E-mail Setting' configuration window. It includes fields for 'SMTP server name', 'Server Port' (set to 25), 'Safe link' (set to None), and a checked 'Authentication' box. There are also fields for 'Username', 'Password', 'Send to', 'Sender', 'Subject', and 'Informatio'. Buttons for 'Email Test' and 'Apply' are at the bottom.

Warm Prompt: All the email "username", "Send to", "Sender" can be the same Email Address. Please ensure the server of IMAP/SMTP&POP/SMTP is ON.

Subject and Message: anything content is ok.

After completed, click "Test" to check the Email setting, if it is successful, click "Apply".

FTP Setting :

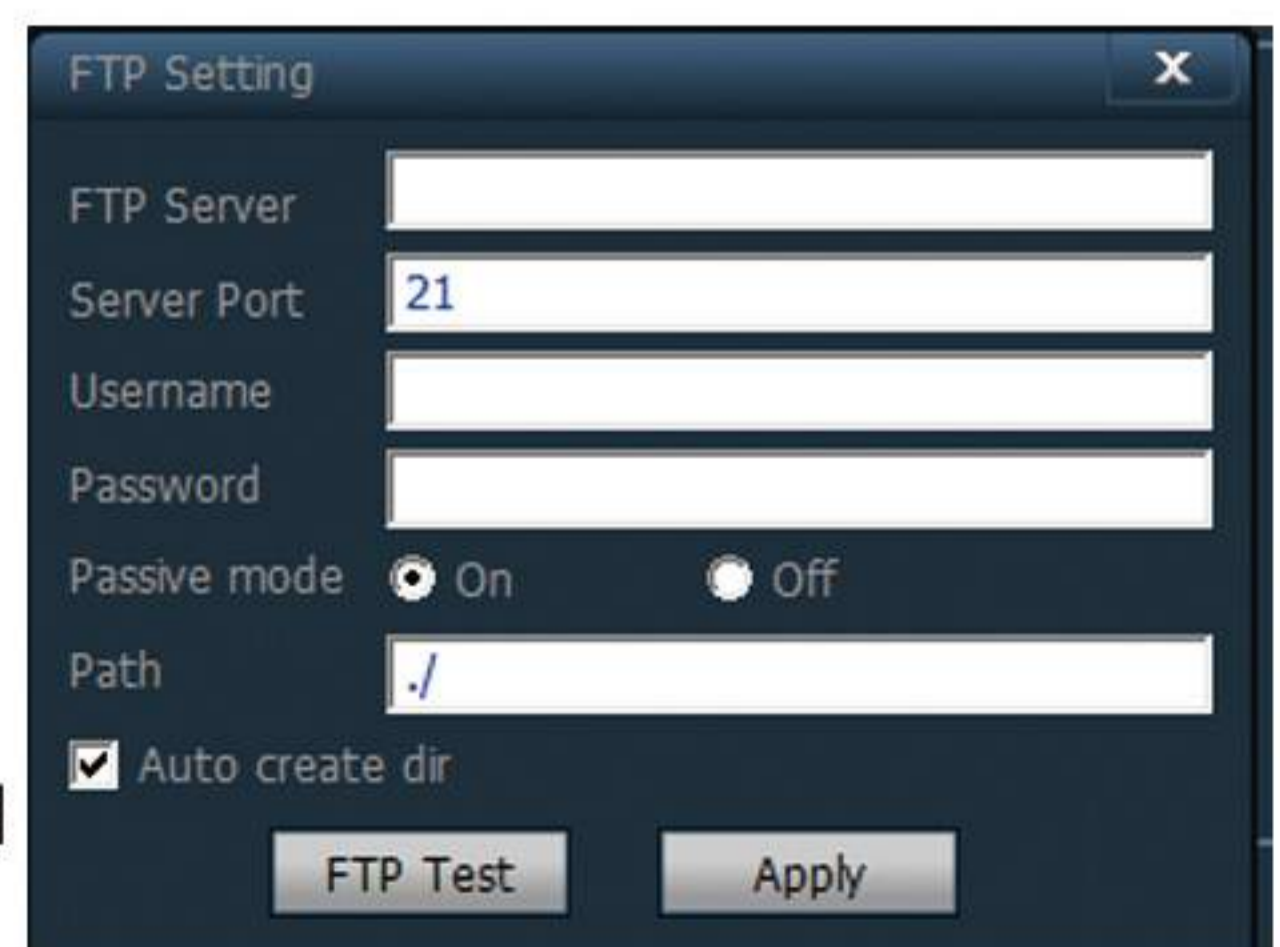

Server Address: Fill in the blank with the FTP address.

Server Port: Fill in the blank with the FTP port.

User Name: Fill the blank with the username of the FTP server.

Password: Fill the blank with the password of the FTP server

Auto Create Dir: If tick it, it will create directory automatically. The name of directory is the date time.

The screenshot shows the 'FTP Setting' configuration window. It includes fields for 'FTP Server', 'Server Port' (set to 21), 'Username', 'Password', and 'Path' (set to /). There are radio buttons for 'Passive mode' (set to On) and a checked 'Auto create dir' checkbox. Buttons for 'FTP Test' and 'Apply' are at the bottom.

Alarm Schedule

SUN~SAT show one week from Saturday to Sunday. Half an hour as for the unit.

3-9-5. Network Setting

Network Setting: network Parameter configuration. DHCP Auto/DNS Auto optional to get IP Address.

RTSP Port: can set RTSP port and RTSP Permission check.

ONVIF Setting: ONVIF ON/OFF, Sever port, time zone setting, image setting etc.

3-9-6. SD Card

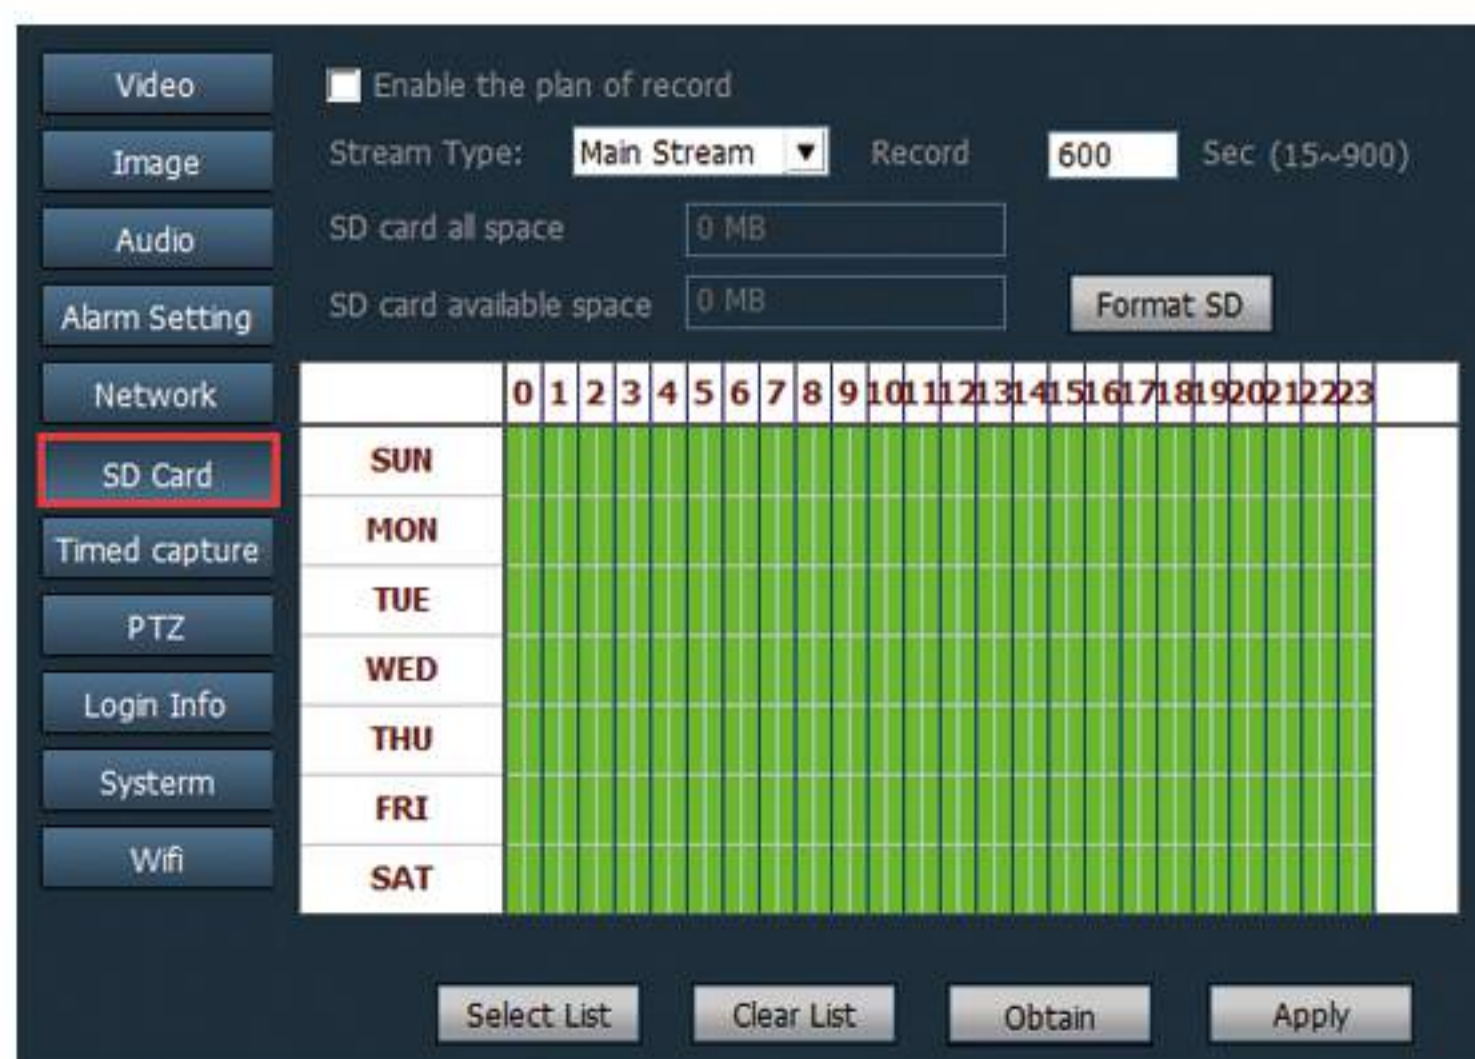

Enable the plan of record: tick it to start the plan of record.

Stream Type: Main Stream/Sub Stream/Third stream optional.

Record Length: 15~900sec optional. default is 600sec.

Format SD: click it to format SD card.

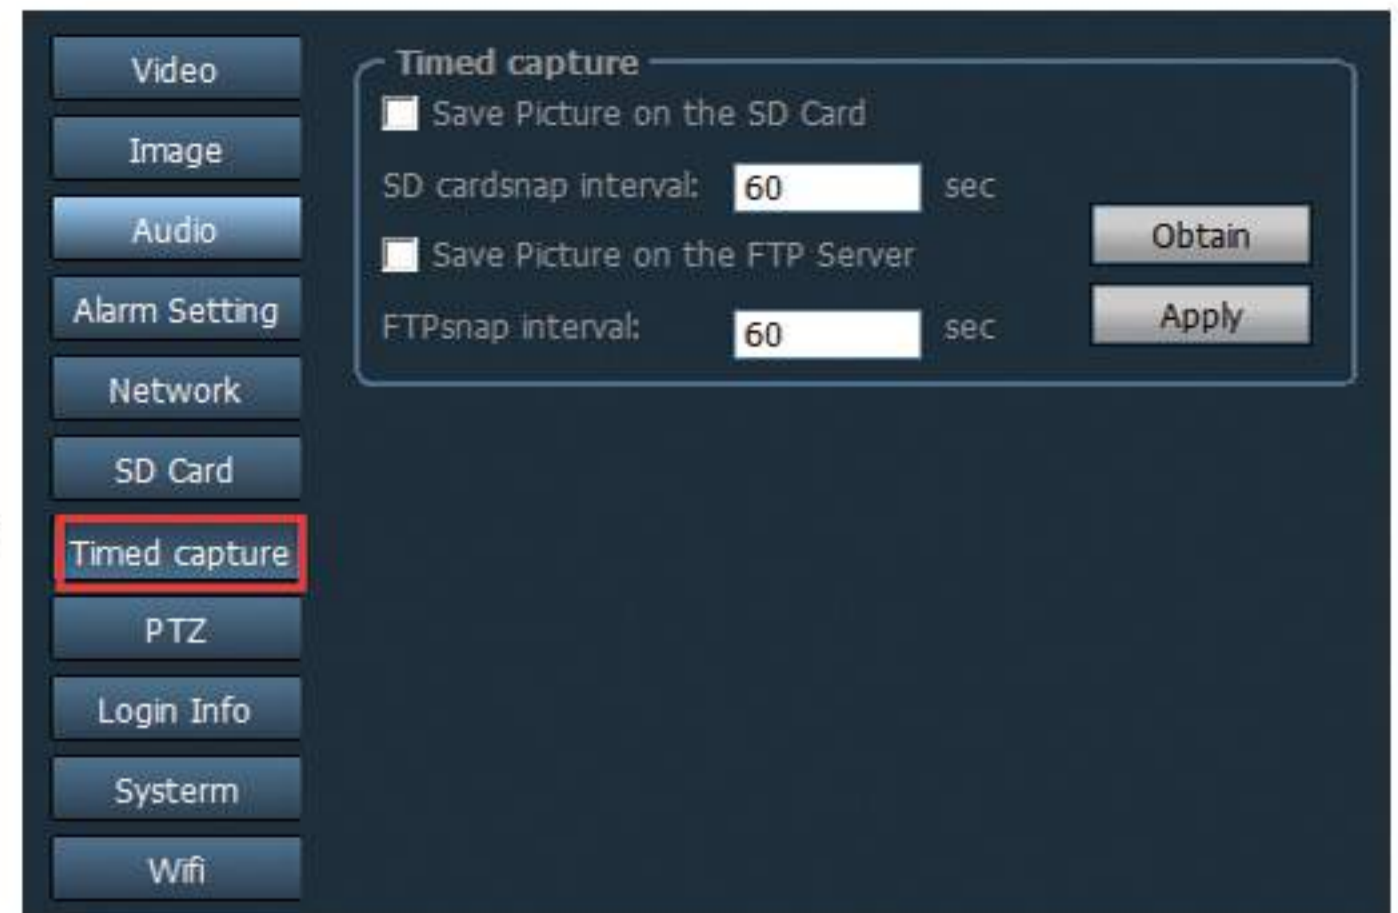

Record time setting: right green area is the recording time.

3-9-7. Timed Capture

If tick "Save picture on the SD Card", the camera will capture a picture each 60s and storage it to the SD card.

If tick "Save picture on the FTP Server", the camera will capture a picture each 60s and send it to the FTP server.

3-9-8. PTZ

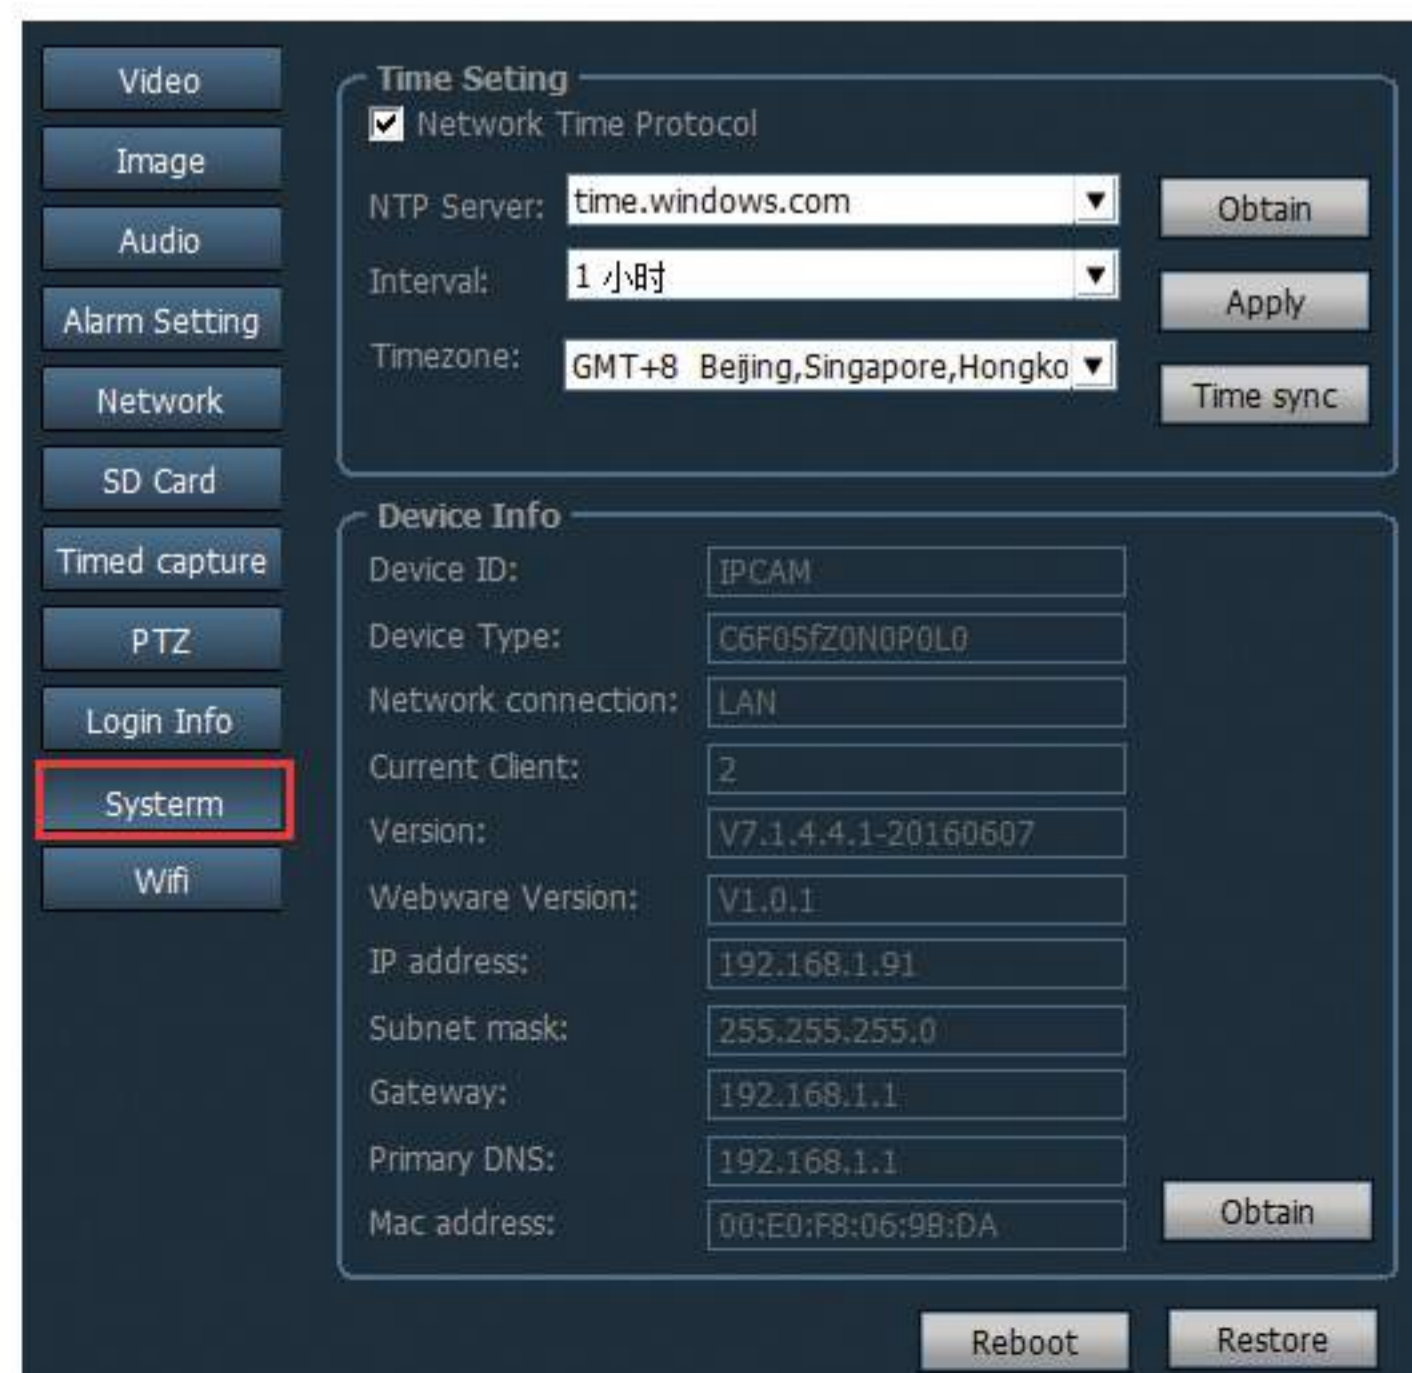

The setting come with Cruise laps, PTZ speed, Centered while self check, close the alarm PTZ movement, Indicator Display Mode ect.

3-9-9. Login Info

Can modify the password of the device.

3-9-10. System

Network Time protocol: include the NTP Server, time interval, time zone setting.

Device Info: from here can get the information like Device ID, software version, IP address, MAC address. Reboot and restore the device.

3-9-11. WIFI

Steps of WIFI setting

Step 1. Click , then click .

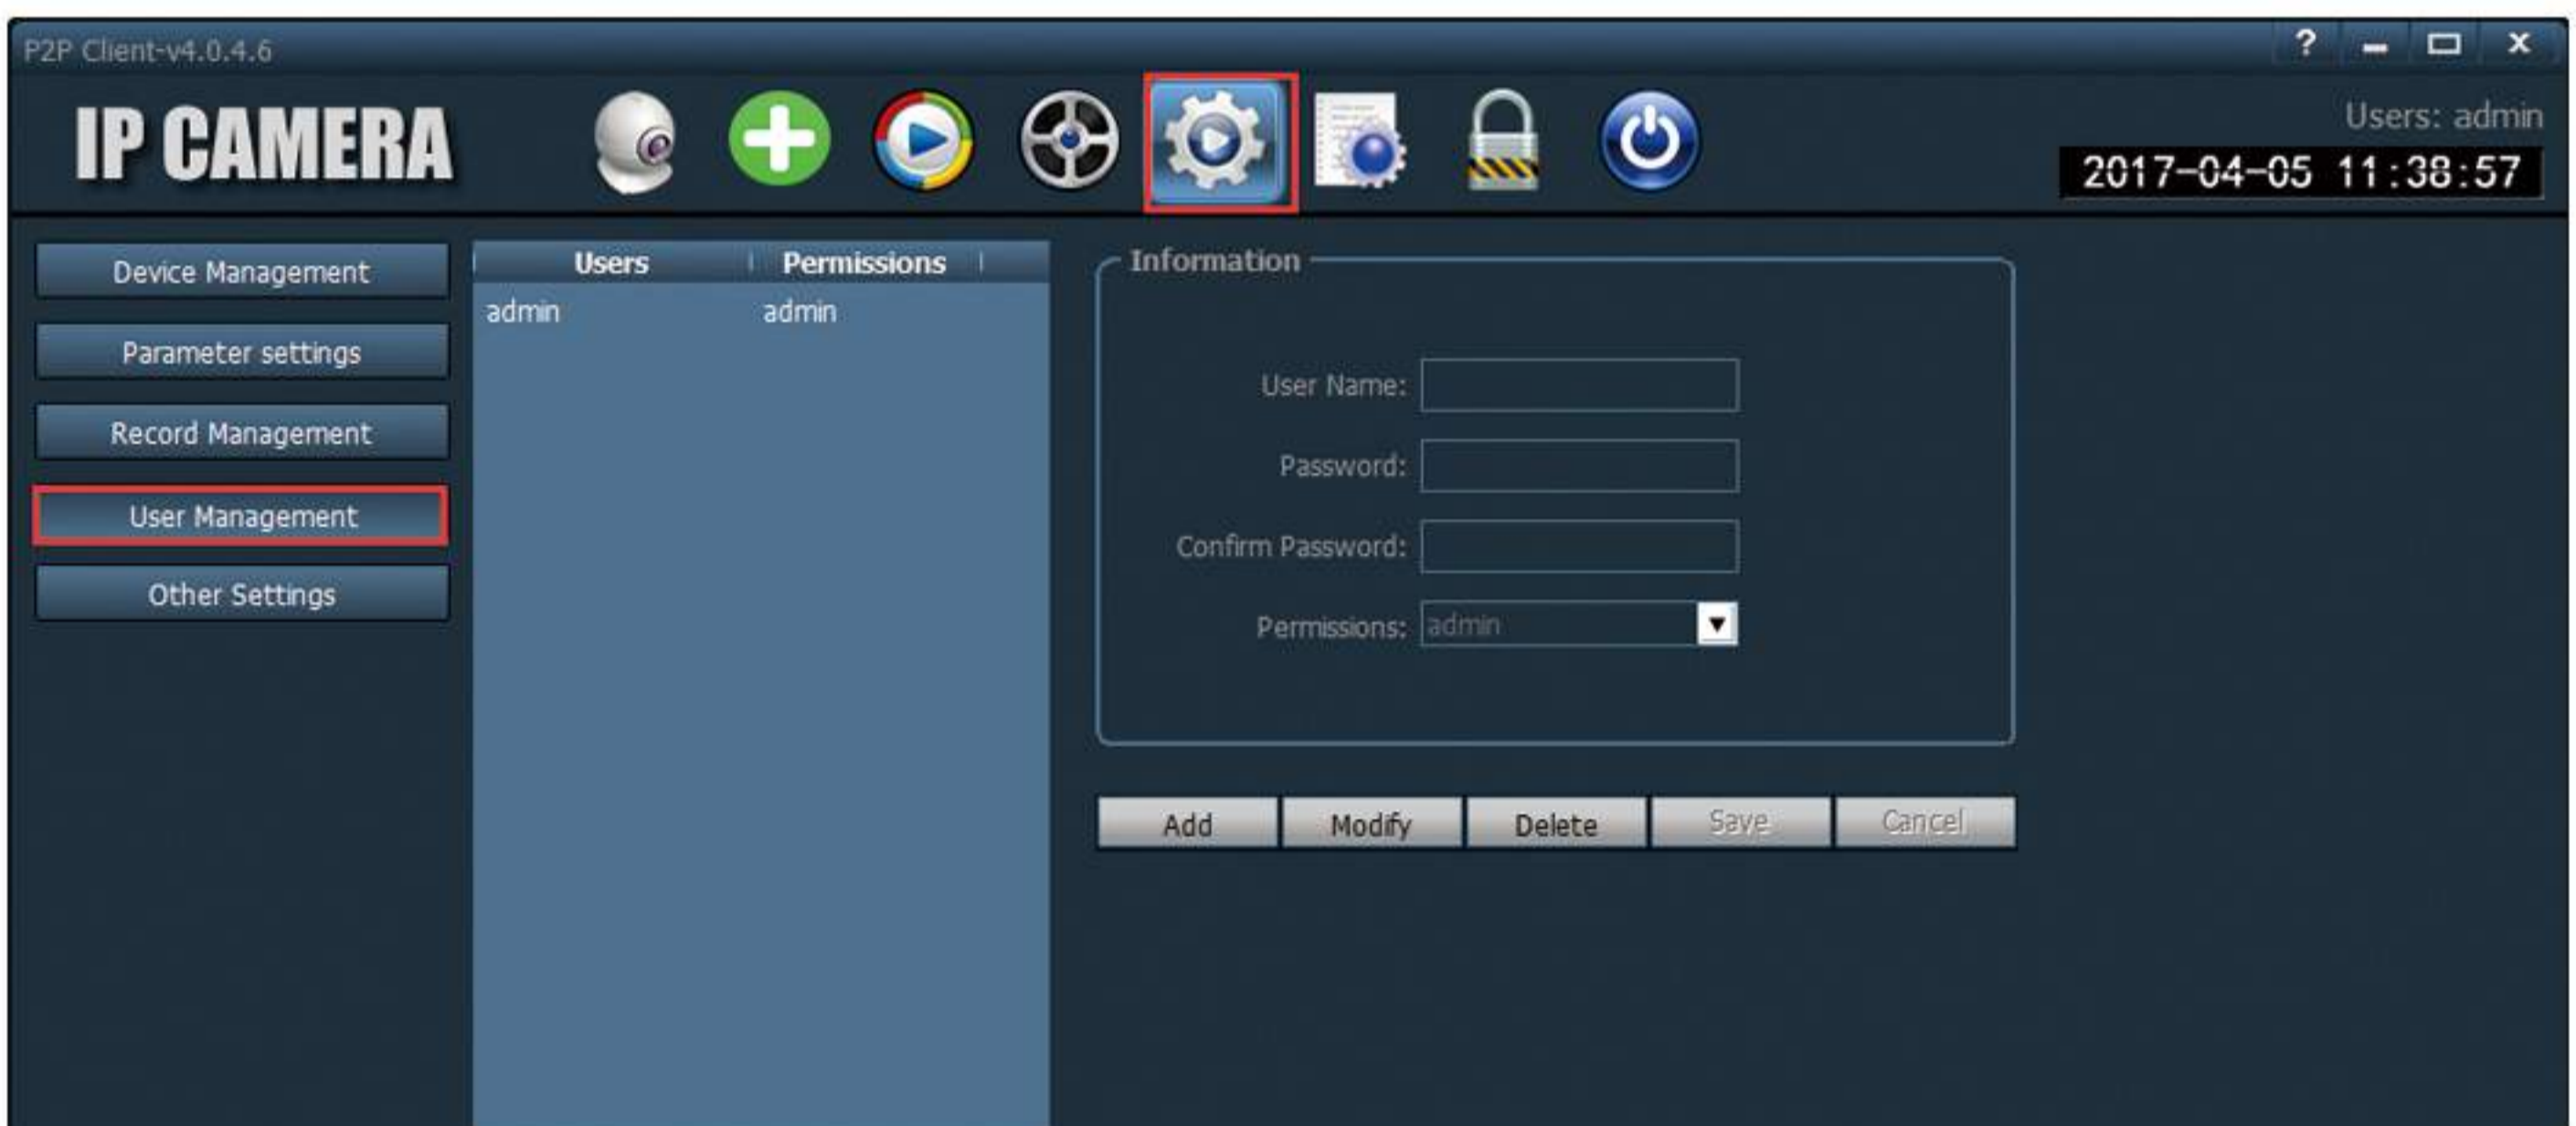

Step 2. Double click SSID of WIFI.

Step 3. Input the WIFI password.

Step 4. Click Apply, after it notify successful, click WIFI check.

3-10. User Management

The default username is “admin”, password is empty. After log in by administrator, he can add and delete user, set user permission. User permission has three types: admin, user, guest.

Admin permission: can undertake device management, user management, video surveillance, record playback, map Settings, log query, switch users and exit from the client;

User permission: can undertake video surveillance, video playback, map Settings, log view, switch users and modify password.

Guest permission: can undertake video surveillance, switch user and modify password.

3-10-1. Steps of Adding User

Step 1: After log in by admin permission, select "Settings" in the TAB bar - "usermanagement".

Step 2: Click "Add" to input the user name and password, and choose the permission.

Step 3: Click "save", user added successful.

3-10-2. Delete user

Step 1: After log in by admin permission, select "Settings" in the TAB bar -- "usermanagement"

Step 2: Choose user want to delete, and click "delete" button.

3-10-3. modify user permissions

Step 1: After log in by admin permission, select "Settings" in the TAB bar - "user management"

Step 2: Select the user and click "edit" button

Step 3: Select the user permission and click "save" button.

3-10-4. modify user password

Step 1: In the TAB bar, select the "Settings" -- "user management"

Step 2: Select the user and click "edit" button

Step 3: Enter a new password and click "save" button

3-11. Other settings

Connect timeout: 5~60sec optional.

Log retention time: 1/ 2/ 3/ 6 month optional. Clients log won't delete during the setting time.

Capture format: the format of the capture image. There are JPG and BMP format.

Image capture path: the storage path for the captured images.

Start the software automatically connect all devices: As the windows start, the CMS software automatically load .

Single Screen number: 16/25/36 pictures optional.

Display Mode: Direct 3D/Direct Draw optional.

Password: set the default password when add the device.

save: after modify the parameters, click the “save” to confirm it.

Export parameters: import all setting parameters of the CMS (back up the configuration).

Import parameters: Import and recovery the back up configuration from other CMS(It require the version is same for the two CMS, otherwise it will bring some errors)

Rebuild video index: Delete the video index and rebuild it.

3-12.Logs

log type

All logs: record all information of system.

System Log: record the user login, exit, and user configuration etc.

Operation log: Record all operation information from users.

Recording device alarm information.

3-12-1. Log retention time

Step 1: In the tab bar, select the "setting"-"other settings".

Step 2: Select "log retention time" ,There are 1/2/3/6 month optional.
Click save.

3-12-2. Log query

step 1: Select a log type and sub log type.

Step 2: Choose the device to view log, default is "all devices".

Step 3: Choose the start time and end time of querying log and click "search" button

3-12-3. Log backup

Step1: Select a log type and sub log type

Step 2: Choose the device to view log, default is all devices

Step 3: Choose the start time and end time of querying log and click "search" button

Step 4: Click the "export" button, and choose the path of backup

Note:

1. When backup log, you must search log firstly, then backup.

2. The export log format is Excel format.

3. Each excel table only can save 5000 pieces log, if the quantity exceed 5000, the left log will form another excel table.

Quick connection for Internet explorer viewing

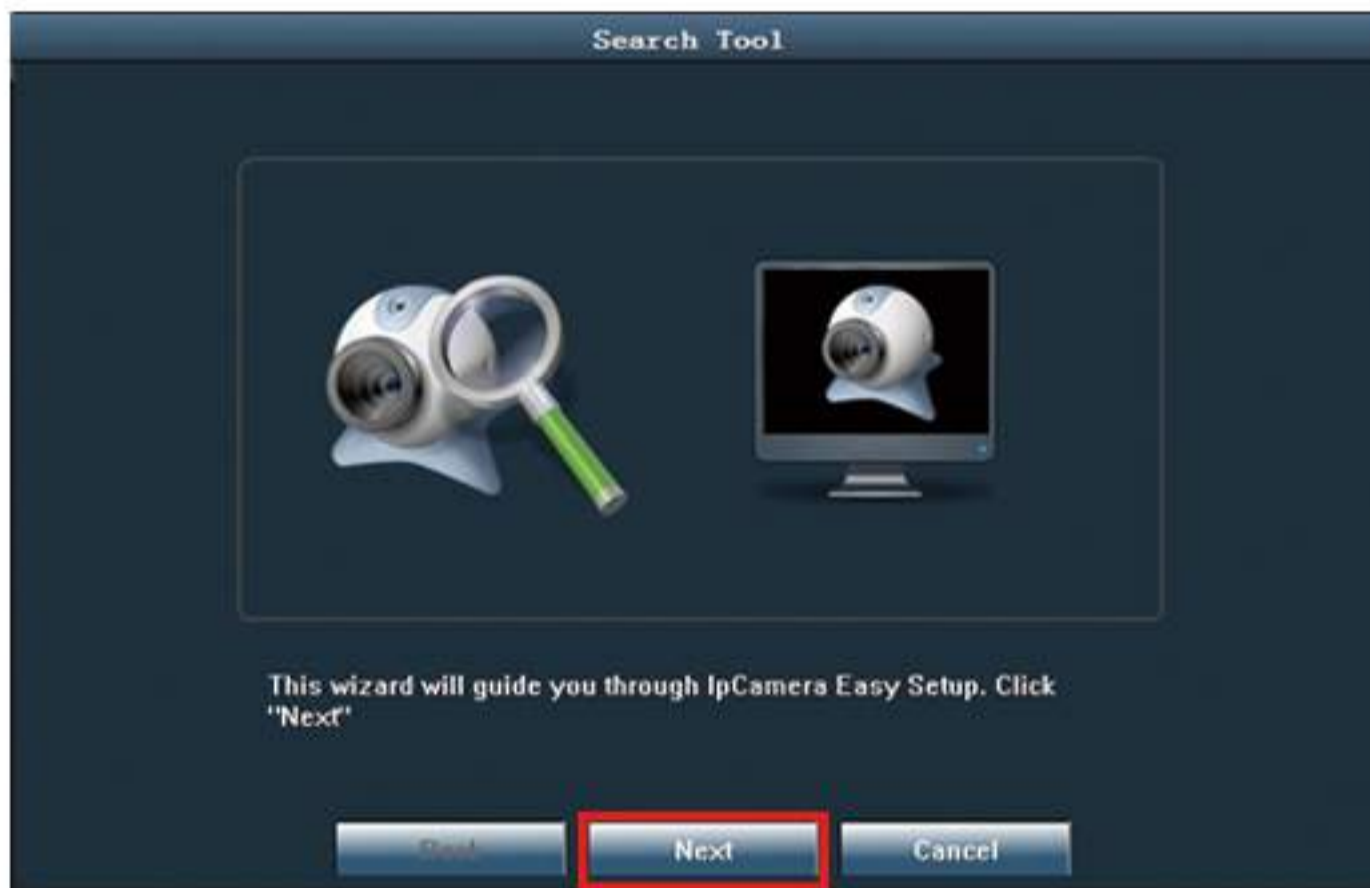

1.To find the IP Address of the camera

① Ensure the camera connected to Internet, then find the IP from the phone APP (refer to page 14: Device information), or from the PC client (refer to page 30: network Settings)

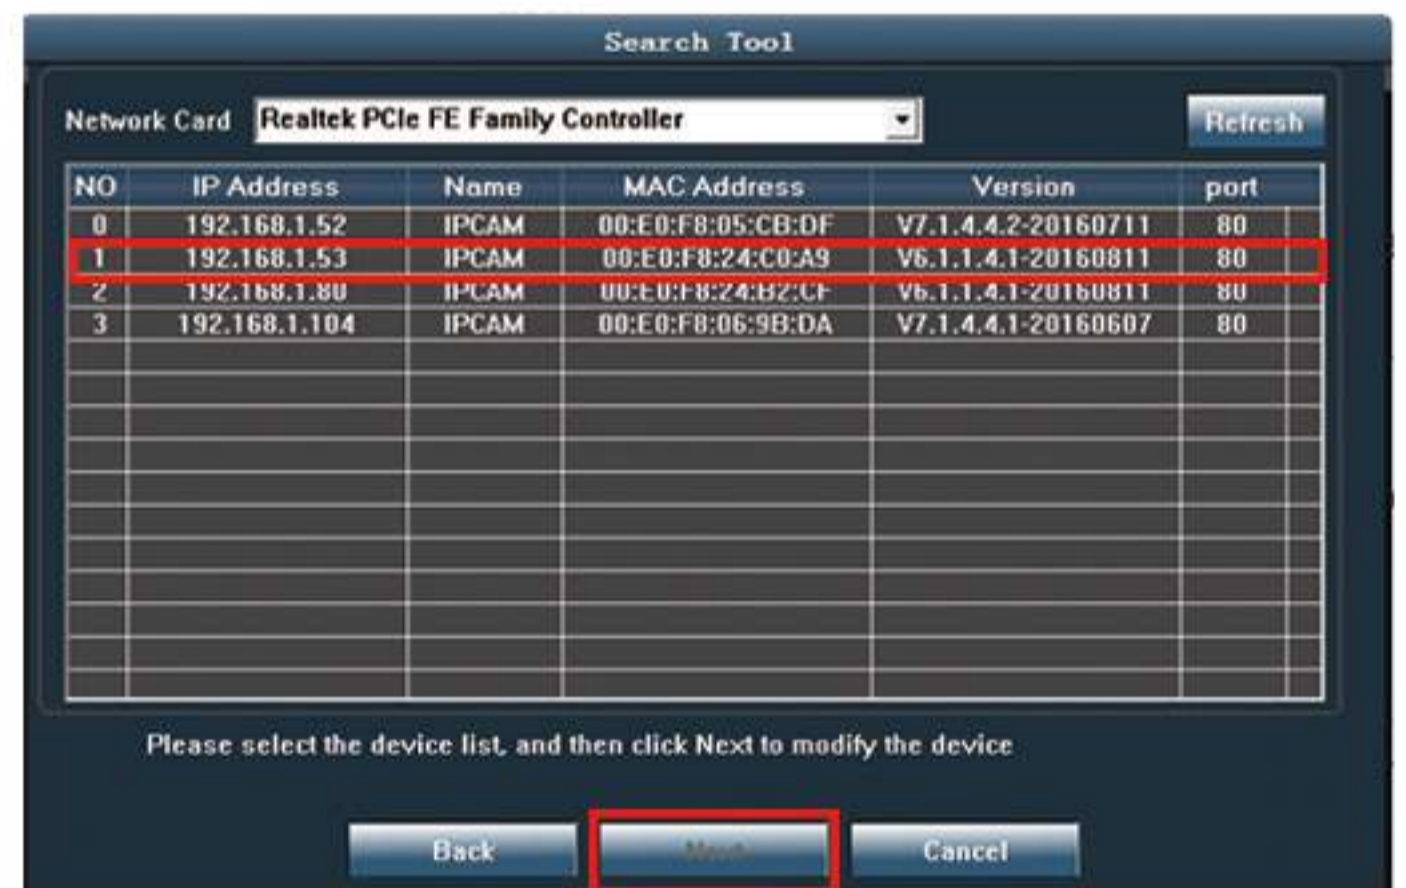

② Or you can search and change the IP through the search tool.

Pls find the "Search Tool" from the CD or contact our after-sales.

As the camera in the coverage of internet. Open the software search tool , it will pop-up a interface as picture 1-1, click "Next", All the IP address in the LAN will come out(As the picture 1-2), click the IP Address which you want to modify, then click"next".

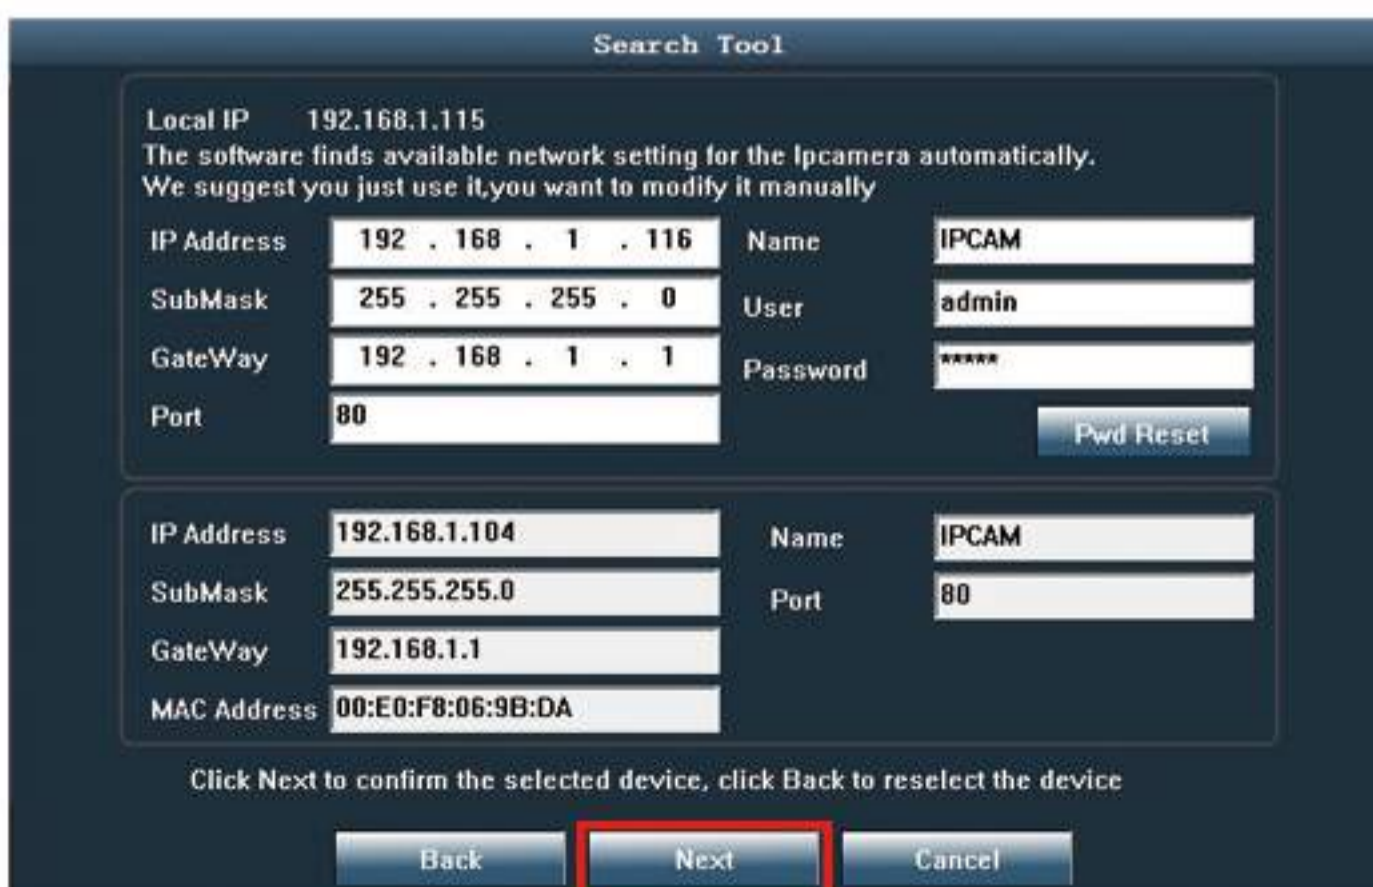

(picture 1-1)

(picture 1-2)

Then come to the next interface (as shown in figure 1-3) software will automatically change the IP address of the camera, no need manual changes, click "next", then come the windows as picture 1-4. And click "Finish".

(picture 1-3)

(picture 1-4)

2.View from the Internet Explorer

Open the IE browser and input the Modified IP address of camera, Then come out the interface as picture 1-5, Input the user name and password (the default user name: admin, the default password: admin), and click “ok” Into the next interface (as shown in figure 1-5), click "PC View" into the main interface(as picture 1-6).

(picture 1-5)

(picture 1-6)

Note: Initial IE browser use need to download the Active-X control .Active-X MsgBox will popup as the camera IP address running in IE browser. After install the Active-X, need to refresh the webpage.

3. IE View Setting

Please refer to the setting of PC CMS. Most of the function are similar.

Others

1. Installation Instructions for wall mounting

Separate the iron plate from the bracket, and install it to the wall. Then cross the cable of the camera through the bracket and make the 0 degree point in the same level of the bracket. Then fix the screw between the bracket and camera. And hung up the bracket to the fixed iron plate, then fix the screw between the plate and bracket.

Wall mounting drawing :

Ceiling drawing:

2.The position of TF card

This device is built in TF card, it is forbidden to dismount by non-professionals. If have to dismount, please do it like as this: Unscrew the 4 screws of the face cover firstly, then unscrew the screws of the chipset to find the TF card.

the position of TF Card

3.Comparison for different functional cameras

Normal End cable

Audio input/
output End cable

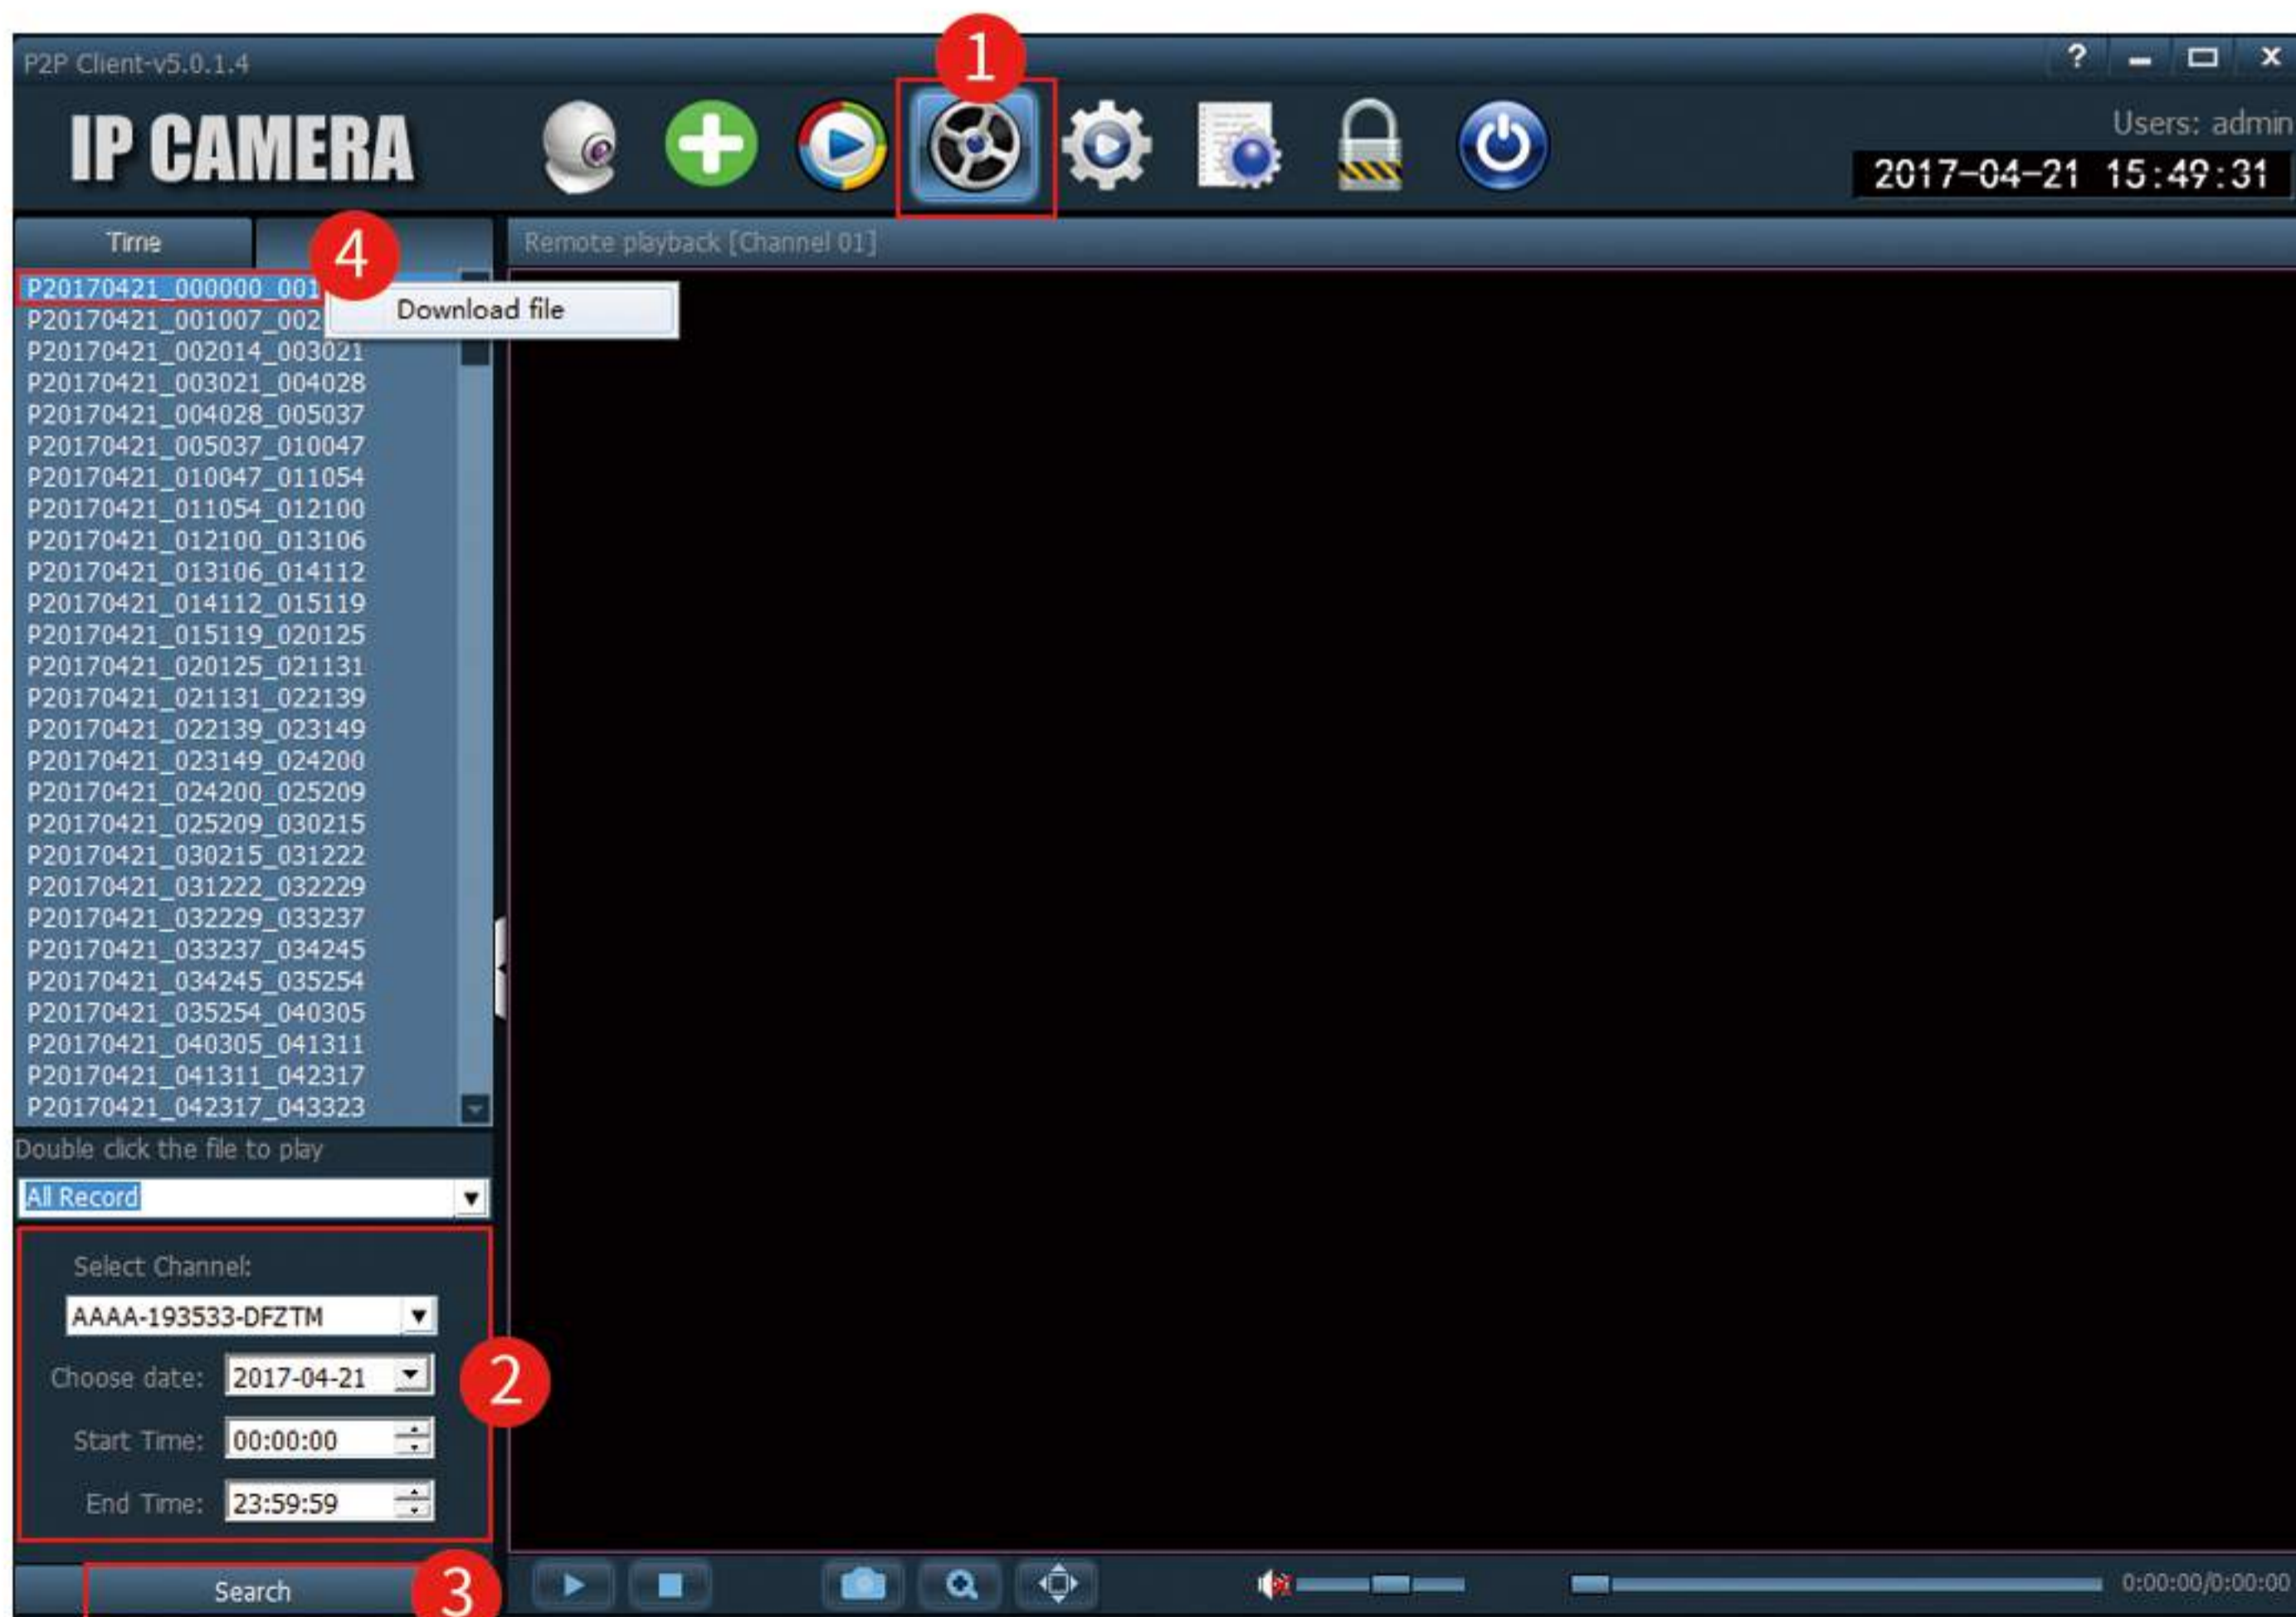

Full functional end cable

4.How to export the videos which stored in the TF card

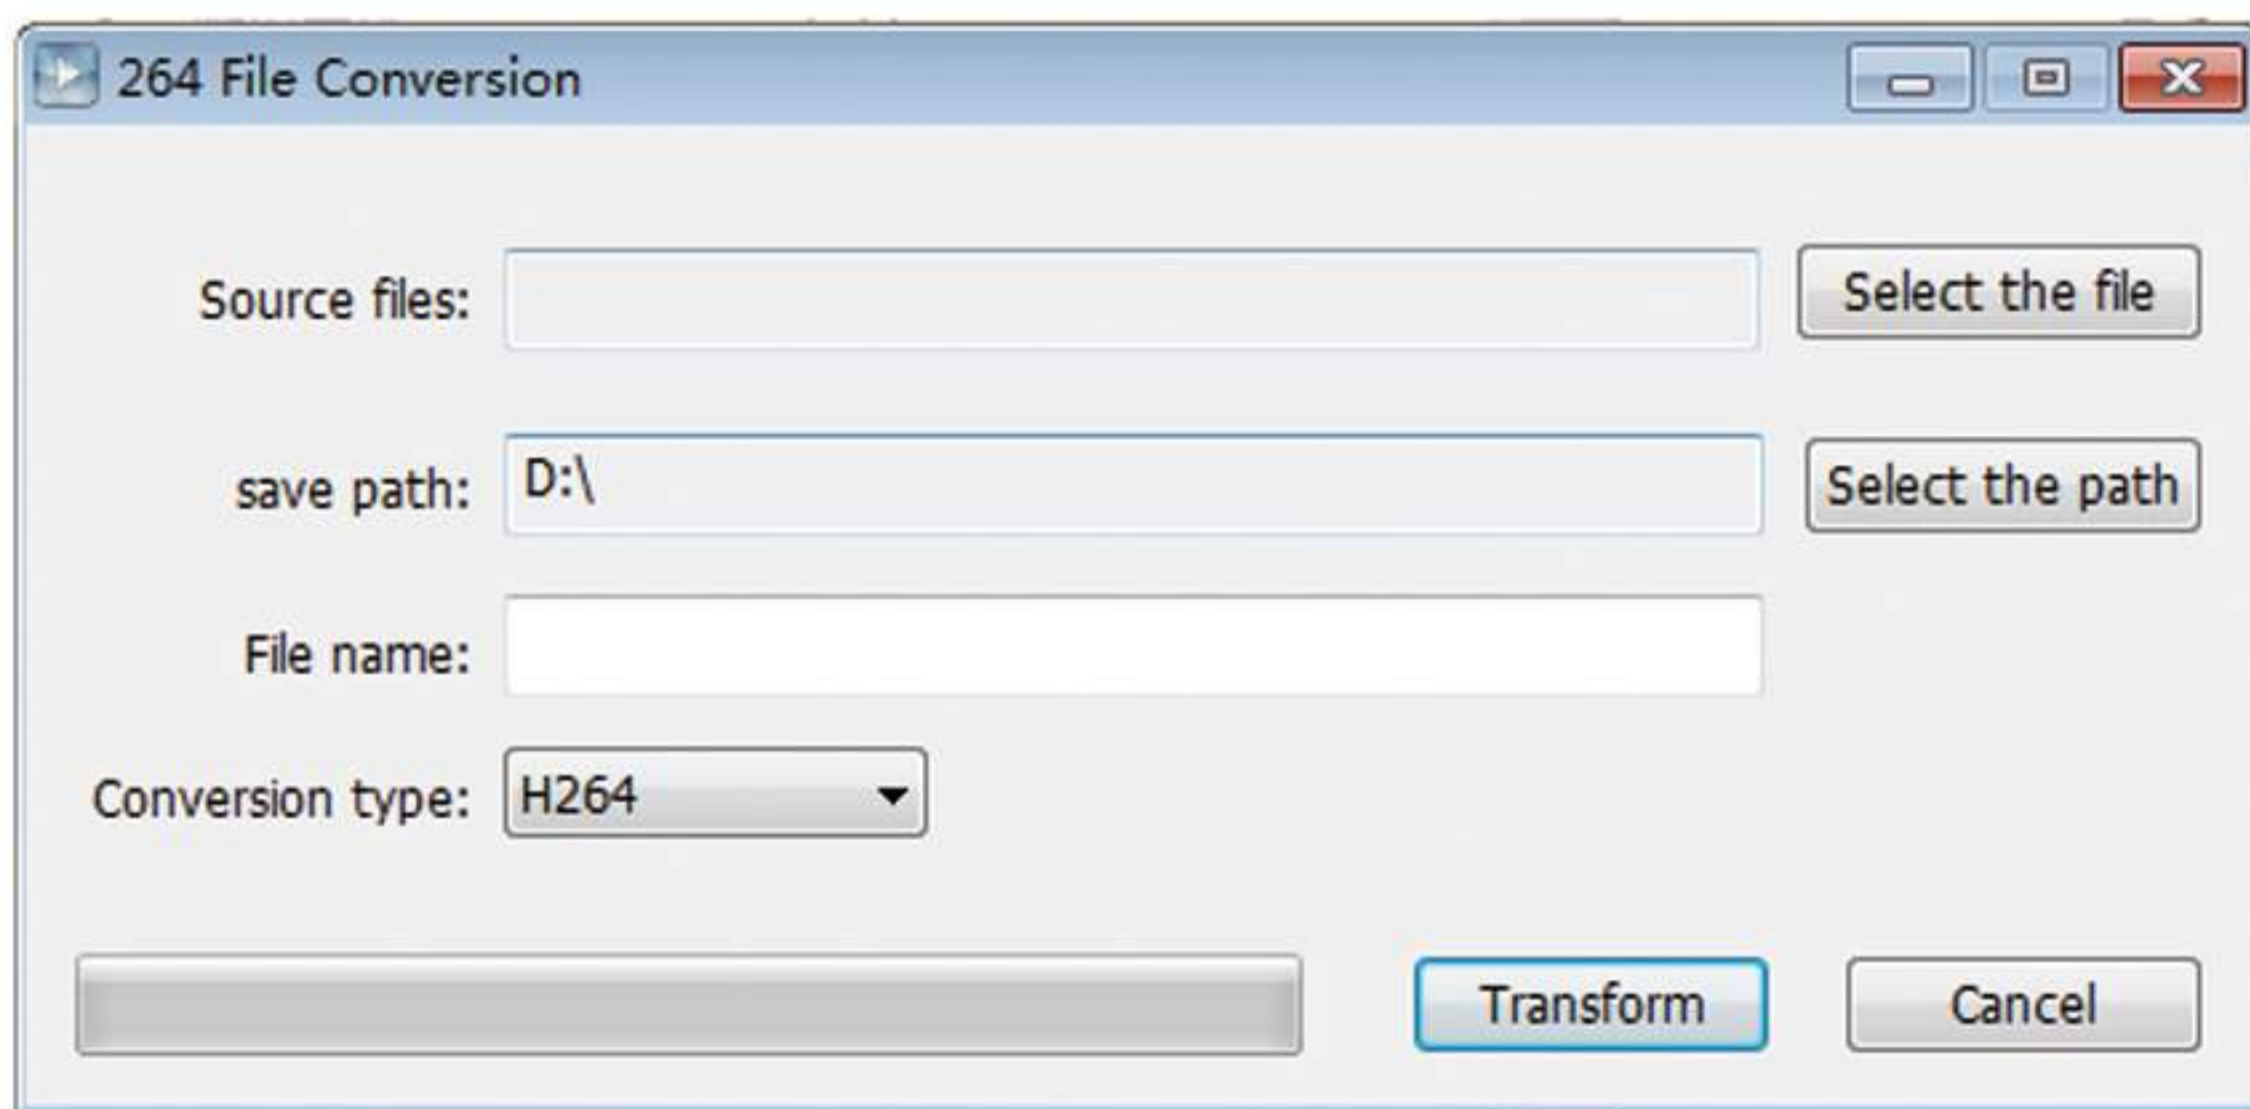

4-1.the steps to export the videos from TF card.

Enter into the PC CMS-remote playback-search recorder-right mouse click-choose "download file"

4-2.The conversion of video format

Back to Application Bar, and open “264 converter”, as below screenshot show:

Operation steps:

Select the file: select the video file which need to convert.

Select the path : select the save path for the converted videos.

File name: the file name of the converted videos.

Conversion type: the type of the converted videos file(there are H.264, AVI, ASF), After all the setting is ready, then click “Transform” to covert it.

5. Restore the factory Settings

In current state, press the reset button to 20s, the camera will back to factory Settings. Also you can enter the mobile phone APP, PC client, or Internet explorer to restore factory Settings. Do not interrupt the power during the recovery process, after 5 minutes, power can be restarted. The videos stored in TF card still exist after restore, but all the setting are same as the factory setting. if you want to delete the videos of the TF card, please enter into the related APP or IE to format it.

6. upgrade

If the program has the new version and you want to update it. after receiving the specified program, Entering into the main video main interface through IE browser , choose parameter Settings-system Settings-initial setup-select file to upgrade.

7. The functions for 4G camera

FDD:B1,B3,B7,B8,B20 TD:B38,B40,B41

3G WCDMA:B1/B8 GSM:900/1800

The Apps of 4G dome camera are same as the normal wifi camera, both are "CamHi" and "P2PHI".

SIM card slot

check the device serial ID

Comment: The 4G camera can work as giving the power and was inserted the SIM card. Although RJ45 internet cable is exist, but it can't connect to the internet.

Option 1 for connection:

Supply power to the camera and insert the SIM card.

Check the device ID, User name, password from the sticker, then add the cameras by phone App(the steps please refer to page 3) or add the camera by PC App(refer to page 19-"method 3").

Option 2 for connection:

Supply power to the camera, but haven't insert the SIM card.

Find the AP from phone setting(as follow picture show). The connect way please refer to the Access point connection as previous instruction.

8. Access point

As the camera connect to the WIFI successful, the AP Model will disappear. Then if changed the router, or reset the wifi password, the camera will fail to connect to internet and the Access point also can't find. in this case, press the reset button to 20s to restore to factory setting, after 2 minutes, you can find the access point by phone again. first connect the camera under AP model, then set WIFI to make camera normal work again.(note: Don't interrupt the power as the restore in progress, otherwise it will damage the camera)
