

GUANGDONG DETECTION CENTER OF MICROBIOLOGY

ANALYSIS AND TEST RESULT

Report №:: 2022SP05503R02E

1.Method description: Prepared a standard solution with certain concentration, and added it to 80g pork. Then added 4L of tap water to the container. Put the pork that had been added with veterinary drugs, and after the machine was turned on for a specified time. After the process, took out the treated pork for test.

2. Test results:

Test Item	Action Time	Test Result		B. B.	
		The initial concentration of the standard sample in the carrier (mg/kg)	The concentration of the standard sample in the carrier after the treatment (mg/kg)	Removal rate (%)	Test Method
Clenbuterol	30 min	1.00	0.114	88.6	Refer to GB/T 21313-2007 (Pre-processing: Refer to SB/T 11190-2017 Appendix B)
