

Important

1, Kindly advise you to upgrade the firmware before using the Power Station.

2, How to upgrade the firmware

The following are instructions for updating the firmware for the Super Power Pro.

Confirm before upgrading:

- 1: The current device has enough power, at least not less than 5%.
- 2: The current device can be started and used normally.
- 3: The current network or Wi-Fi hotspot signal is strong.

Steps to upgrade:

1: First, please download the Vanpowers APP, and refer to the "Vanpowers App User Guide" to register an account and log in. If you cannot receive the verification information during registration, please check the spam mailbox.

2: Refer to this video to bind your Super Power Pro and APP. And please make sure the Wi-Fi hotspot is 2.4GHZ.

3: After binding the device to the APP, you can see the current information of the device on the System Settings page of the APP. At this point you can refer to the video in step 2 to update the firmware.

After completing the above steps, you can start to experience the latest firmware.
