SAFETY INSTRUCTIONS

Warnings

- Do not install or operate the dashcam with wet hands.
- Do not install the dashcam in places with high humidity, flammable gases, liquids, and positions blocking the sight of the driver or the safety area.
- Do not expose the dashcam in high temperature inside a sealed compartment for a long time.
- Do not use the dashcam in excess of the rated voltage.
- The cigarette lighter socket of your car continues to supply electricity after the engine is off, please disconnect the dashcam plug from the socket before leaving the car to prevent the automotive battery from depletion or other accidents.
- Keep the dashcam, accessories and package away from children!
- Use only the charging cable provided by the manufacturer. This company assumes no responsibility for any damage caused by the use of non-genuine charging cables.
- Do not disassemble the dashcam or the charging cable.
- Please recycle the battery in accordance with local laws and regulations.
- Please do not attempt to disassemble, modify or heat up the battery.
- Do not replace the battery by yourself. Improper battery replacement may result in explosion!
- Keep the battery away from water (e.g. seawater) and other liquids.
- Prevent short circuit on the battery.
- Keep the battery away from direct sunlight, fire, or an environment with excessive heat to prevent explosion.
- Do not throw the battery in a fire to prevent explosion.

⚠ Do not cut the charging cable!

⚠ Damage caused to the dashcam as a result is not covered by the warranty!

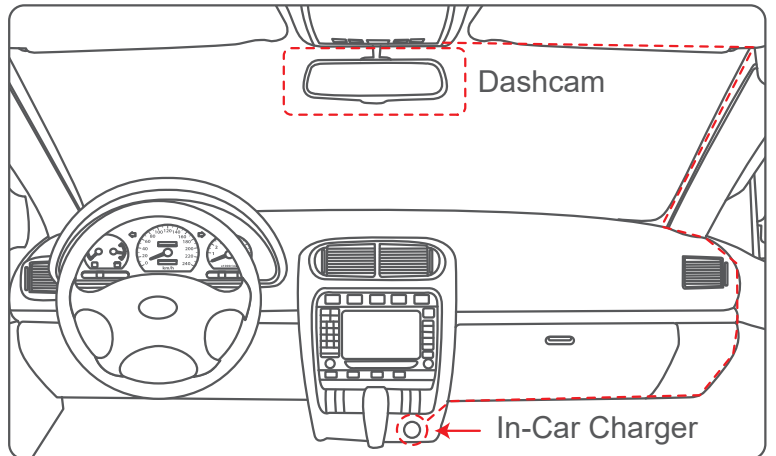

Caution

- Do not forcefully press the lens.
- Do not prick the dashcam or accessories with an awl or sharp object.
- Do not immediately remove the TF card from a shutting down dashcam to prevent the file from damage.
- Please use a Class 10 or above TF card of at least 8GB (maximum 128GB)
- Before using the TF card on the dashcam for the first time, please format the TF card in the dashcam to ensure read / write stability.
- Do not disconnect power during system upgrade! The dashcam may be unable to boot afterwards!
- Contents of this manual are subject to change without prior notice.

INSTALLATION GUIDE

Installation Position

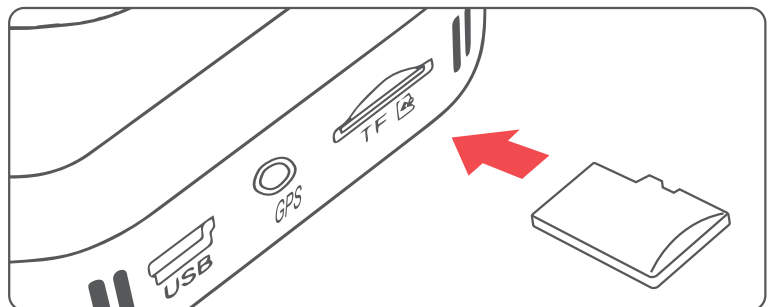

- Do not install the dashcam in a position that will block the view of the driver or in an unsafe area.
- Install the dashcam near the rearview mirror but not in a place that will block the vision of the driver.
- Install the dashcam within the wiper blade area to ensure that the camera lens will capture clear video on a rainy day.
- Do not install the dashcam near the airbag operating range.
- Do not install the dashcam on the windscreen protection film to prevent damage to the protection film.
- Install the dashcam in a position that will not affect any other electronic devices you may have in your vehicle.

- ⚠ Do not install the dashcam on top of the airbag cover or the airbag operating range. This company assumes no responsibility for injury or death caused by car impact or airbag problems.**

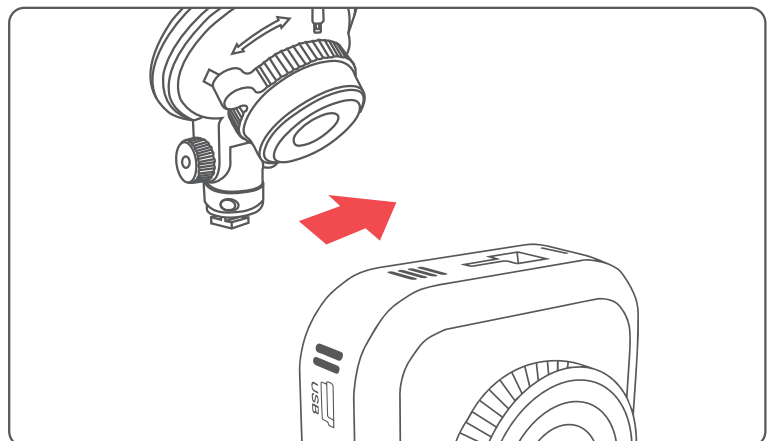

TF Card Installation

- Install the TF card in the TF socket with the pins facing downwards.

Installation Method

1. Aim the magnetic transfer slide buckle at the mount buckle on the dashcam.
2. Hold the dashcam and chuck bracket with your hands, and aim the mount at the chuck bracket on the dashcam.
3. Select a proper position (such as the center of the rearview mirror), attach the suction mound to the windshield and rotate the mount clockwise to lock.
4. Adjust the recording angle (it is the best angle that the car front shows in the middle of the display).

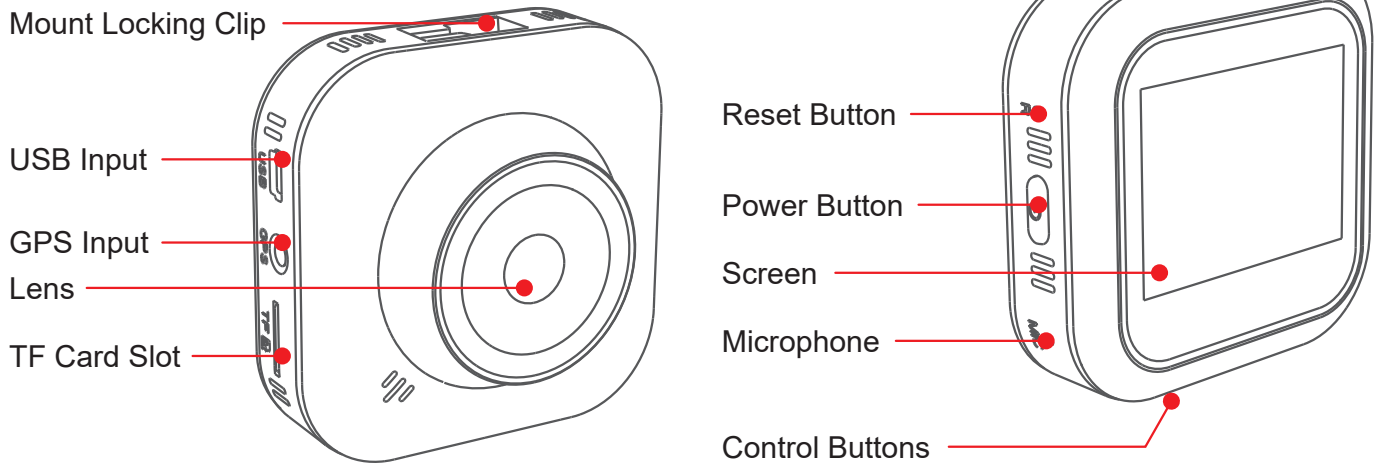

- ⚠ The suction mount can be replaced by sticker mount. Select a proper position, tear the protective paper and paste into the front windshield (do not move within 24 hours)**

FUNCTION INTRODUCTION

Video Recording

● Loop Recording

The dashcam will start video recording automatically after powering on. When the TF card storage is full, old footages will be replaced by new ones automatically if the old ones are not locked. You can choose 3 / 5 / 10 Minutes for the video length.

● Motion Detection Recording

Turn on “Motion Detection” in “Setup” menu. This function is designed to monitor, when you have parked and left your vehicle but still requires a continuous power supply. It will record video each time motion is detected.

● Time-Lapse Recording

Turn on “Time-Lapse Recording” in “Setup” menu. This function will capture ten photos per second to make a video played at a high-quality 10fps frame rate. The videos will be saved in the “Video File” folder.

⚠ Time-Lapse Recording is not suitable for monitoring purposes while driving.

Emergency Recording

● Manual File Backup

Press  to back up the current file so that it will not be overwritten. An  icon will appear in the top-left of the screen to indicate a protected emergency recording is in progress.

● Auto File Backup

Once the G-sensor is activated by a sudden collision, the dashcam will automatically start recording and protect it from being overwritten. You can adjust the G-sensor sensitivity in the “Setup” menu.

⚠ You can enter the playlist or “Setup” menu (or disconnect power) to end emergency recording mode.

Audio Recording

Turn on / off audio recording by long-pressing  when in video recording mode (or by turning on “Audio Recording” in the “Setup” menu). Details from the recorded sound may provide useful information, such as possible hazards that may develop, especially when off-camera.

Snapshot

- Hold down  for 3 seconds to take a snapshot while in recording mode.
- The snapshot files are located in the \SPEDAL\Photo folder on the TF card.
- An  icon will be shown after you take a snapshot. This will not interfere with the video recording.

Viewing Photos and Videos

1. Press  to enter the playlist.
2. View photos or videos by choosing either “Photo File” or “Video File”.
3. Select the file you want to view and press .
4. For videos, press  again to begin playback.

Deleting and Locking / Unlocking Photos and Videos

- Press  to delete or  to lock / unlock a photo or video file after selecting it from the playlist. If a video is being played, press  to stop it and then press  to delete or  to lock / unlock.
- Once deleted, photos and videos can not be recovered.
- If you lock a photo or video, it will be protected and will not be overwritten.

FILE TRANSFER

USB File Transfer

1. Connect the dashcam (with TF card inserted) to your computer using your own USB mini-B data cable (the included cable is for power supply only). It should be recognized as a removable device.
2. Find the video recording files located in the \SPEDAL\Movie folder. Find the snapshots in \SPEDAL\Photo.
3. Copy the files to your computer.

TF Card File Transfer

1. Shut down the dashcam and eject the TF card.
2. Insert the TF card into a computer TF card slot or reader and your computer will automatically detect the TF card.
3. Find the video recording files located in the \SPEDAL\Movie folder or \SPEDAL\Photo for snapshots.
4. Copy the files to your computer.
