- Thank you for purchasing the Rsrteng IP camera tester. Please read the manual before using the IP camera tester and use properly. We have built this user manual in the tester, you can also view it on your tester.
- For using the IP camera tester safely, please first read the [Safety Information] carefully in the manual.
- If the functions marked with * or / mult-options in the manual are differentiated functions. Whether you have this function depends on the model you purchased.
- The manual should be kept well in case of reference.
- Keep the S/N label for after-sale service within warranty period. Product without S/N label will be charged for repair service.
- If there is any question or problem while using the IP camera tester, or damages occurred on the product, please contact our After-sales service department <u>service@rsrteng.com</u> or view <u>WWW.RSRTENG.COM</u>.

1. Safety information

• The tester is intended to use in compliance with the local rules of the electrical usage and avoid to apply at the places which are inapplicable for the use of electrics such as hospital, gas station etc.

- To prevent the functional decline or failure, the product should not be sprinkled or damped.
- The exposed part of the tester should not be touched by the dust and liquid.

• During transportation and use, it is highly recommended to avoid the violent collision and vibration of the tester, lest damaging components and causing failure.

◆ Don't leave the tester alone while charging and recharging. If the battery is found severely hot, the tester should be powered off from the electric source at once. The tester should not be charged over 8 hours.

• Don't use the tester where the humidity is high. Once the tester is damp, power off immediately and move away other connected cables.

- The tester should not be used in the environment with the flammable gas.
- Do not disassemble the instrument since no component inside can be repaired by the user. If the disassembly is necessary indeed, please contact with the technician of our company.
- The instrument should not be used under the environment with strong electromagnetic interference.
- Don't touch the tester with wet hands or waterish things.

• Don't use the detergent to clean and the dry cloth is suggested to use. If the dirt is not easy to remove, the soft cloth with water or neutral detergent can be used. But the cloth should be tweaked sufficiently.

About Digital Multi-meter

- Before using, you must select the right input jack, function and range.
- Never exceed the protection limit values indicated in specifications for each range

of measurement.

- When the tester is linked to a measurement circuit, do not touch unused terminals.
- Do not measure voltage if the voltage on the terminals exceeds 660V above earth ground.

• At the manual range, when the value scale to be measured is unknown beforehand, set the range selector at the highest position.

◆ Always be careful when working with voltages above 60V DC or 40V AC, keep fingers behind the

probe barriers while measuring.

- Never connect the meter with any voltage source while the function switch is in the current, resistance, capacitance, diode, continuity, otherwise it will damage the meter.
- Never perform capacitance measurements unless the capacitor to be measured has been discharged fully.
- Never measure any of resistance, capacitance, diode or continuity measurements on live circuits.

Visual laser sources

When you turn on visual laser sources, please don't stare at it, or will damage to eyes

When not using it, please turn it off and cover the protective cap.

2. IP Camera Tester Introduction

2.1 General

The Rsrteng 7 inch touch screen IP camera tester is designed for maintenance and installation of 4K 12MP IP cameras, analog CVBS cameras, 8MP TVI, 8MP CVI, 8MP AHD, 8MP EX-SDI cameras, as well as testing 4K H.264 /4K H.265 camera via mainstream, The 1920x1200 resolution enables it to display network HD cameras and analog cameras in high resolution. The unit supports many ONVIF PTZ and analog PTZ control. The combination of touch screen and key buttons make the IP camera tester very user-friendly.

The tester is also a great tool for Ethernet network testing. It can test PoE power voltage, PING, and IP address searching. You can use the blue cable tracer to locate individual connected cables from a bundle of cables. Test LAN cable for proper connection termination. Other functions include providing 25.5W PoE power to your camera, HDMI IN and OUT, CVBS loop test, testing IP and analog at the same time, LED Flashlight, DC 12V 3A, DC 24V 2A, power output and much more. Its portability, user-friendly design and many other functions make the IP tester an essential tool for all installers or technicians.

2.2 Model feature comparison

The IPC-9800 Plus+ series has multiple models, this manual lists all the functions of the tester, but does not mean that your tester has all the functions in the user manual. Except for IPC-9800MOVTADHS Plus+, other models will not support some of these functions. it depends on the model you purchased. You can see the difference between different models from the table.

Model Feature	IPC-9800 Plus+	IPC-9800C Plus+	IPC-9800ADH Plus+	IPC-9800ADHC Plus+	IPC-9800ADHS Plus+	IPC-9800ADHSC Plus+	IPC-9800MOVTADHS Plus+

2.3 Packing list

- 1). Tester
- 2). Adaptor DC12V 2A

- 3). Network cable tester
- 4). Polymer lithium ion battery (7.6V DC 7800mAh)
- 5). BNC cable
- 6). RS485 cable
- 7). SC, ST connector (Only for optical power meter)
- 8). Multi-meter test leads one pair of red and black (only for the Multi-meter models)
- 9). Output Power cable
- 10). Audio cable
- 11). TDR alligator clamp (only for TDR models)
- 12). 8GB SD card
- 13). Safety cord
- 14). Tool bag
- 15). Manual

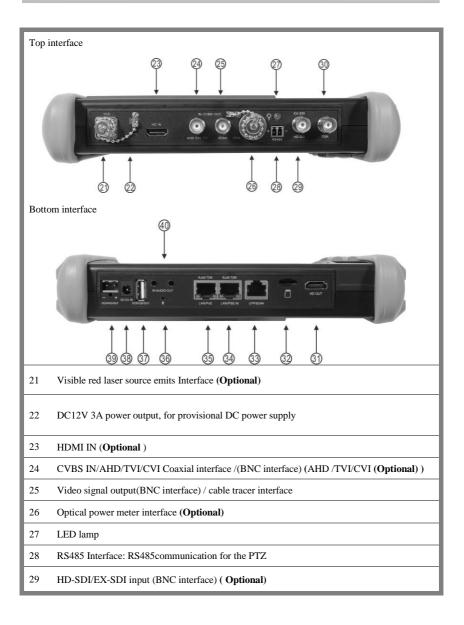

2.4 Function interface

1	0	Press more than 2 seconds, turn on or off the device, short press to turn on or off the menu display
2	MENU	Menu key, press it to call short- menu.
3	$(\mathbf{\widehat{e}})$	4xzoom the image displays.
4	(FAR+)	Far focus: Focus the image faraway
5	NEAR-	Near focus: Focus the image nearby
6	(TELE +	TELE: zoom in the image
7	WIDE -	WIDE: zoom out the image
8	OPEN	Open/set, Confirm the setting of parameters, open or enlarge the aperture
9	CLOSE	Return/Close: Return or cancel while setting parameters of the menu, close or decrease the aperture
10		Upward, set function or add parameter. Tilt the PTZ upward
11	$\left({}^{\scriptscriptstyle {\rm D}}\right)$	Rightward, select the parameter whose value will be changed. Add the value of the parameter. Pan the PTZ right
12	$\overline{\nabla}$	Downward, set function or reduce the value of the parameter. Tilt the PTZ downward
13		Leftward, select the parameter whose value will be changed
14	ENTER	Confirm key,(Long press it to capture screen interface)
15	RETURN	Return/Close : Return or cancel while setting parameters of the menu, close or decrease the aperture
16		Multi meter interface (Optional)
17		The charge indicator: it lights red while the battery is being charged. As the charging is complete, the indicator turns off automatically
18		The RS485 data transmission indicator: it lights red while the data is being transmitted
19		The data received indicator: it lights red while the data is being received
20		The power indicator: it lights green while the tester is powered by the adapter

30	TDR cable test interface (Optional)
31	HDMI output interface
32	Micro SD card slot,(comes with 8GB, supports up to 32GB)
33	UTP cable port: UTP cable tester port/ Cable tracer port
34	PSE power sourcing equipment. Tests PoE voltage/LAN test port
35	PoE power supply output or LAN test port (Using test PoE or non-PoE IP camera)
36	Microphone
37	USB 5V 2A power output, transmit data.
38	DC 12V 2A charging interface.
39	DC 24V 2A output
40	Audio input/Audio output and earphone interface.

3. Operation

3.1 Installing the Battery

The tester has a built-in lithium-ion polymer rechargeable battery. For safety, the battery should be insulated during transportation. Before using the instrument, remove the battery insulation.

Normally, there is no need to insulate the battery during normal use, and the tester can be turned on or off by pressing 0 button continuously.

Notice: Please use the original adaptor and connected cable of the device!

When the battery icon is full or the charge indicator turns off automatically, indicate the battery charging is completed.

Notice: When the Charge Indicator 🕩 turns off, the battery is approximately 90% charged.

The charging time can be extended for about 1 hour and the charging time within 12 hours will not damage the battery.

MNotice: Press the key (\mathbf{U}) several seconds to restore the default settings when the

instrument works abnormally.

Multi-meter: the red and black multi-meter pen must insert the corresponding port.

Warnings: Instrument communication port is not permitted access circuit voltage over 6V,

otherwise damage the tester.

Warnings: Not allow insert multi-meter pen in the current

terminal to measure voltage.

3.2 Instrument connection

3.2.1 IP camera connection

Power an IP camera with an independent power supply, then connect the IP camera to the IPC tester's LAN port, if the link indicator of the tester's LAN port is green and the data indicator flickers, it means the IP camera and the IPC tester are communicating. If the two indicators don't flicker, check if the IP camera is powered on or the network cable is not functioning properly.

Note: 1) If the IP camera requires PoE power, then connect the IP camera to the IP tester's LAN port . The tester will supply PoE Power for the IP camera. Click the icon POE to turn the PoE Power off or on.

2) If use the tester's menu to turn off the tester's PoE power supply, the PoE switch and the power sourcing equipment are allowed to connect to the tester's PSE port, and the PoE power will be supplied to the IP camera by the tester's LAN port. On this condition, the tester cannot receive data from IP camera, but the computer connected to the PoE switch can receive the data via the the tester.

Warning: PoE switch or PSE power sourcing equipment only can be connected to tester "PSE IN" port, otherwise will damage the tester.

3.2.2 Analog camera connection

1) Connect the camera's video output to the IP tester's VIDEO IN. The image will display on the tester after pushing the PTZ icon.

2) CCTV IP Tester "VIDEO OUT" interface connect to the Video input of monitor and optical video transmitter and receiver, the image display on the tester and monitor.

3) Connect the camera or the speed dome RS485 controller cable to the tester RS485 interface.(Note: positive and negative connection of the cable)

3.2.3 HD Coaxial camera connection

* SDI, CVI, TVI, AHD camera are classified as HD coaxial cameras. Hereby the following instruction of how to connect SDI camera to the tester is also applied to CVI, TVI, and AHD camera.

1) Connect the SDI camera's video output to the IP tester's "SDI IN" interface, the image will display on the tester. The tester only come with SDI input interface. There is no SDI output interface.

2) Connect the SDI camera or the speed dome RS485 controller cable to the tester RS485 interface.

3.2.4 HDMI IN

DVR/NVR or other device's HDMI out port connect to tester's HDMI in port, the meter will display input image. Support 4K 3840x2160P 30fps.

3.2.5 HDMI output

The built in HDMI output port can output live video from an analog or IP camera, recorded files, media files and images to HDTV monitors. Connect an HDMI cable from the IP tester to an HDTV monitor at any time. It supports up to 1080P resolution.

3.3 OSD menu

Press the key (1) 2 seconds to turn on Press the key (1) again to turn off short press the key (1) to enter sleep mode, press it again to test. If tester works abnormally and cannot be turned off, Press the key (1) several seconds to turn off, the tester reset.

3.3.1 Drop-down Menu

Press and slide at right top right corner twice to open shortcut menu. The shortcut menu includes POE power output, IP settings, Wi-Fi, HDMI IN, CVBS, Video OUT, LAN, Brightness, settings etc.

HDMI: Click HDMI IN to enter, In HDMI IN mode, it can converter test from analog to digital with dual test window IP & HDMI in or Analog & HDMI in.

CVBS: Click icon "CVBS"to enter, you can test IP and analog camera at the same time.

TV OUT: Click TV OUT to enter floating window, connecting the BNC cable to tester and appears analog video monitor interface, it can test circuit and BNC cable whether normal.

LAN: Display network port or WIFI connection real-time upload and download speeds and other

network parameters. Settings: Enter settings interface.

IP: Enter IP Settings interface. POE power output: Turn on or off the tester "PoE power" app.

3.3.2 Short cut-menu

You can call shortcut -menu by press tester's "menu" key, you can self- define shortcut -menu.

Press the key (MENU), you can turn on it, and switch functions, then press to enter app, tap other area on the screen, to exit the menu.

You can long press any app in the all applications list, it will auto move to shortcut menu. If delete any app in the shortcut menu, please select a app and press several seconds, it will be deleted.

3.3.3 Screen capture

Long press the key "enter", can capture screen interface and save it in any time.

You can go file management to view "file Explorer -sdcard- Pictures-Screenshots".

3.3.4 Link monitor

Tap icon "Link Monitoring" at left corner on the screen, to enter.

It can detect instrument port rate 10/100/1000M, signal quality detection, upload and download speed,

etc. in real time. It can be used to detect whether the network video access bandwidth of devices such as NVR is normal.

When using a four-core cable to connect to a Gigabit device, would prompt "the link limited".

3.3.5 TesterPlay

Mobile screen projection (Only for android version)

The meter creates WIFI hotspot, connect mobile phone to the tester's WIFI hotspot, or the tester and mobile phone connect the same Wi-fi network. Download and install Remote control app to mobile phone, Tap icon " ; select "TesterPlay" app, Click "Start" will create the RTSP URL.

Mobile phone enter "Remote control" app, please click "Automatically search for IP" to search remote host IP, then click "Play" to display the real-time image and control IPC Tester.

If can't find the IP address, can click "Manually search for IP", and input tester's rtsp url to remote host

IP, such as 192.168.0.186, then click "Play". Please contract supplier for Remote control APP.

🚍 Remo	te Control

PC screen projection:

Install VLC player in the PC, turn on the VLC player "Media - Open Network Streaming", and input the RTSP address of on the top instrument two-dimensional code, click "play" to view the screen real-time projection.

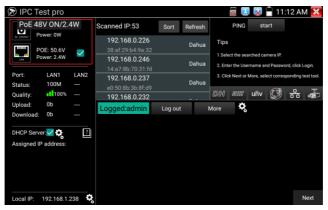

3.3.6 IPC test pro

Camera test often need to open multiple apps, "IPC TEST PRO" app, using new technology and combine multiple functions to one APP, such as POE ,DC 12V power information, IP scan and DHCP etc. It can improve working efficiency.Click icon to enter

Power information

POE power: when entering "IPC test pro app", 48V PoE Auto-turn on, if exit it, Auto-turn off.

12V power: if the meter turn on, DC12V Auto-turn on, after enter "IPC test pro", support DC12V power output ,as well display power and voltage of DC12V power supply . (If select box, then exit not turn on PoE)

Networking information

Link status: 10/100/1000M Auto adapt, display the current network rate of the connected device.

Signal quality: the transmission quality of the currently connected network, normal is 100%.

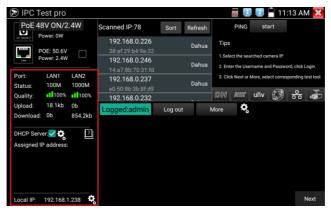

Upload/Download rate: Real-time upload and download rate of the LAN and PSE IN port of the meter.

Practicability: connect the meter to the transmission channel between the hard disk or recorder and the camera, detect the real-time bandwidth traffic of the network and the hard disk recorder.

Checking bandwidth problems caused network or video recorder loss problems etc.

DHCP server: after entering "IPC test pro" app, the DHCP Auto-turn on. Go "Assigned IP "-IP Info., click icon " to enter "Network tool-DHCP .

Local IP: display IP address of the meter, click icon²²³ to enter "System setting-IP setting".

Camera information

Total number of searched IP address: Display the searched device IP address list. After entering the APP, when the network is connected, it will automatically search for the IP of the cameras in the entire network connected to the tester. Click "Sort" to sort by IP in ascending order. Click "Refresh" to search the list again.

PING test: After selecting the IP address of the camera, click "Start" to perform a ping test.

HIKVISION and Dahua camera activation

After searching for inactive cameras, click on the camera IP to pop up an activation window.

All inactive cameras will be activated in batches, and after activation, the camera IP addresses will be automatically incremented modified by default. The IP address range can be set by yourself.

Camera image display:

1) Input the correct Username and Password, When there is no input box, click "Logout" to expand

the input box.

- 2) Click the camera IP to display the camera image.
- 3) Double-click the image display area or click "Next" to jump to the ONVIF function.
- 4) Dahua, Hikvision, and Uniview etc camera can be tested with the corresponding camera test tool

on the right side of the IP list.

Setting

Auto login: ON/OFF

Video transmission protocol: If the video can't be displayed when input the correct camera username and password, please try to switch the video transmission protocol. Some cameras only support UDP transmission protocol.

More features

Click "more" to jump to more function interface. Click "+" icon to add other programs for quick jump.

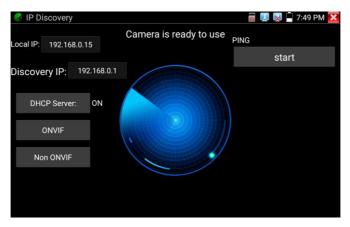

3.3.7 IP discovery

Press IP discovery , tester auto-scan the whole network segment IP, as well as auto-modify the

tester's IP to the same network segment with the scanned camera's IP.

Local IP: Tester's IP address, Tester can auto-modify the tester's IP to the same network segment with the scanned camera's IP

Discovery IP: Connected tester equipment's IP address. If the camera connected to the tester directly, tester will display the camera's IP address, if tester connects to Local Area Network, it displays the current IP address.

Temp IIP: After searching IP address, the modified tester's IP address will not be saved, if you do not select "Temp IP" the modified tester's IP address will auto-save after searching.

Start: PING function, Click "Start", can PING camera's IP

Rapid ONVIF: Rapid ONVIF Quick link

NON ONVIF: NON ONVIF Quick link

Applicability: Using IP discovery app, you don't need to know the first two digits of camera's IP address, it can auto-scan the whole network segment IP, and auto-modify tester's IP address, greatly improved engineering efficiency.

3.3.8 Rapid ONVIF test

Rapid ONVIF can display 4K H.265/H.264 camera image by tester mainstream, one key to activate

Hikvision camera.

Press

enter Rapid ONVIF function, the meter auto scan all ONVIF cameras in different network

segments. It lists cameras name and IP address on the Left of screen. Tester can auto login camera and display camera image. Factory default use admin password to auto login, if you modified the password, then default use the modified password to log in.

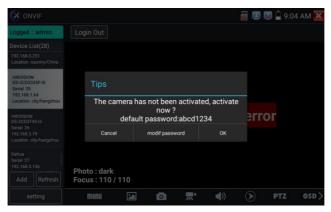

If you select ONVIF Rapid mode, the meter automatically scan different network segments for ONVIF cameras. It lists the camera name and IP address on the Device List. Tester can auto login camera and display camera image.

Click the button "Refresh", tester will scan the ONVIF camera again. Click the newly displayed ONVIF camera on the "Device List". The tester will show the IP camera's relative information and settings.

Activate HIKVISION Camera: When connected inactivated HIKVISION Camera, tester can auto recognized, and prompt "The camera have not been activated, activated now?", click "OK" to start activate .

Pop-up settings menu when click the "ONVIF setting" icon in the upper left corner.

Cross network scan: After open this function, enter "Setting - IP Settings - Advanced" to add other network segments IP, Rapid ONVIF function can across network segments to scan camera's IP.

Auto Login: After open this function, tester can auto login camera and display camera image. (The login password is the same with last time, the first time using password is the default password "admin")

Video transmission protocol: UTP and TCP protocol.

View manual: Open Manual.

Restore Defaults settings: Revert "Rapid ONVIF" to default settings.

OK: Save the modified parameters.

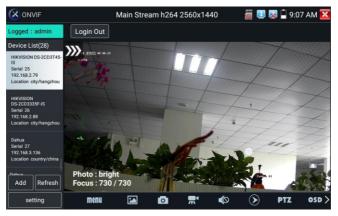

Click "MENU" icon to open camera setting.

While in the "Live video" menu, click "Video Menu" at the top right of the image to access the following tools: Snapshot, Record, Photo, Playback, PTZ and Settings.

ONVIF PTZ control: Tap the image in the direction you want the PTZ camera to move. Tap the left side of the image to move left, right to go right, up to go up and down to go down. Compatible IP PTZ cameras will rotate accordingly. PTZ rotation direction is displayed on top left corner of the image.

IP camera video settings: Click "Video Set" to enter the IP camera's encoder and resolution settings. Make the desired changes and click "OK" to save.

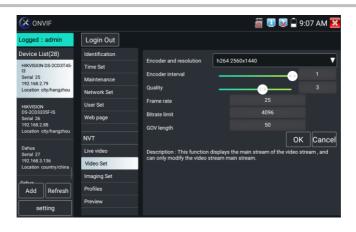

Image setting: Click "Imaging Set" to adjust image brightness, saturation, contrast, sharpness and backlight compensation mode.

setting		Note: If the ip information c	annot be modified su	ccessfully,		

When the image is enlarged, if not operate on touch screen, it can operate by the keyboard, press the

key (TEE^+) to zoon in, press the key (WDE^-) to zoom out, press upward and downward key to move image.

If it is network video input to the tester, as the tester supports resolution up to 1080p, the input image will be very clear after it is enlarged. This is greatly helpful for the installers to ensure the IP camera's video coverage and decide the IP camera's install site.

Image can only be enlarged on SD mode (The icon "ONVIF" is SD mode.)

Select relative function on the bottom Toolbar to operate, "Snapshot", "Record", "Photos",

"Video playback", "Storage set", "PTZ control" etc.

Snapshot: Click bottom "snapshot" to screenshot the image and store it to SD card.

If select manual storage, appears dialog box "Input Name", user-defined the files name(by Chinese character, English letter or digit) to save in SD card, if select "Auto- storage", the tester auto stores the files after snapshot.

Record: When you click bottom the "Record" icon, video starts recording. A red recording icon appears on the screen and begins to flash and a timer appears indicating the time elapsed for the video. Click on the "Stop" icon to stop recording and save the video file to the SD card.

Playback: Click the "Playback" icon to view saved videos. Double click the video you want to play. Click to return to the last menu.

To rename or delete a photo, click and hold on the file until this screen appears:

OSD Menu: Select OSD and popup the OSD menu. include time, channel name and other optional

items.

IPC Port :	Cancel	ок 5198				
Video streaming transp						
Enter						

IP Camera's IP: Enter the IP camera's IP address manually or click "Search" to auto-scan for the IP camera's IP address. It is better to directly connect the IP camera to the tester so the search results will only display the camera's IP address. If the tester is connected to a PoE switch, it will find and display several IP address.

IPC User Name: Enter IP camera's user name

IPC Password: Enter IP camera's login password.

IPC Port: When you select the IP camera type, it will default the camera's port number and doesn't

need to be changed.

After all settings are completed, click "Enter" to view the live video.

If IP address setting has error or IP camera is not connected.. The tester prompts "Network Error"

Click **K** to quit from image display and return to IP camera test interface.

Once you are viewing video on the IPC Test app, you will see the "Video Menu" icon on the top right. This button will give you access to Snapshot, Record, Photo, Playback, PTZ, and Set. Please refer to the ONVIF section to use these functions.

3.3.10 HDMI IN (*Optional)

HDMI in HD signal test, Tap icon "

When tester receives HDMI in image, the top tool bar shows the resolution of this image. You can select "resolution" to set resolution in the setting menu. Tap screen by twice, full image display. Support resolution below

4K 3840×2160-30FPS/2K 2560×1440P/1920×1080p /1920×1080i /720×480p /720×576p /1280 ×720p/1024×768p/1280×1024p /1280×900p /1440×900p

(1) Snapshot

Click the icon "Snapshot", when the video in, to take a picture and save the current video frame in the SD card as JPEG file.

If the unit is set to the manual mode an "Input Name" pop up box will appear and you can enter a title for the snapshot. If the unit is set up to automatically set file names, this box will not pop up.

(2) Video record

When you click the "Record" icon, video starts recording. A red recording icon appears on the screen and begins to flash and a timer appears indicating the time elapsed for the video. Click on the "Record"

icon again to stop recording and save the video file to the SD card.

if select manual storage, before recording begins, appears dialog box "Input Name", user-defined the files name(by Chinese character, English letter or digit) to store in SD card, tester will hereby store the files in SD card after recording. if select "Auto-storage", tester will auto store the files in SD card after recording.

(3)Photo

Click the icon "photo" to enter, click the selected thumbnail photo to display it on the screen.

Double-tap the image you want to view to make it full screen. Double-click again the photo to return.

To rename or delete an image, click and hold on the file until this screen below appears

Click to close and return to PTZ controller.

(4) Recorded video playback

Click the "Playback" icon to view your recorded videos. Tap on the video file image you want to watch.

To rename or delete a video, click and hold on the file until this screen appears:

Vide	o player		👸 💷 😡 🖣 9:09 AM 🔀
\triangleright	/sdcard/ONVIFToolVideo	otape/video/2019-06-27 0	9-09-43.mp4
		Rename	
		Delete	

Video files also can play in the main menu "Video Player".

3.3.11 Analog camera test

Display the input video image, click the top menu bar icon (PEAK level, SYNC level, COLOR BURST measurement) to enter video level meter,

Select relative function on the right side Toolbar to operate, functions including "Photos", "Snapshot",

"Record", "Playback", "PTZ", "Set".

Click 🐹 , or press (MENU | to quit.

Click the screen twice quickly, can be full zoom in on the touch screen.

1) PTZ controller parameter setting

Select and click icon "PTZ", to enter PTZ setting:

🎘 CVBS		TRANSPORT OF		PA	L 🖀 🐖 ,	10:1	1 AM 🔀
1/1	2155/	1	1				
125	Protocols:	\Box	Pelco D				Photo
	Port:		RS485				ଳୋ
11	Baud Rate:	\triangleleft	2400				Snapshot
	Address:	\triangleleft			2		00]
	Tilt speed:	\triangleleft	40				Record
	Tilt speed:	\triangleleft	40				\triangleright
	Set Position:	\triangleleft	8	\triangleright		00	Playback
	Call Position:		8	\triangleright			
(a)	ОК		Canc	el			PTZ
							R
							Set

A. Protocol

Use the up and down arrow keys to move the yellow cursor to the "protocol", set corresponding Protocol and support more than thirty PTZ protocols. Such as Pelco-D, Samsung, Yaan, LiLin, CSR600, Panasonic, Sony-EVI etc.

B. Port

Click and move to "port" Select the communication port for the PTZ camera controlling (RS485)

C. Baud

Move the yellow cursor to "Baud ", Select the baud rate according to baud rate of the PTZ

camera.(150/300/600/1200/2400/4800/9600/19200/57600/115200)

D. Address

Set the ID according the ID of PTZ camera ($0\sim254$), the setting address data must be consistent the speed dome address.

- E. Pan speed: Set the pan speed of PTZ camera (0~63)
- F. Tilt speed: Set the tilt speed of PTZ camera (0~63)
- G. Set preset position (Set PS)

Click and select "Set PS", set and save preset position number(1~128).

H. Call the preset position (Go PS)

Click and select "Set PS", set and save preset position number (1~128), click "sure" to save,

Call some special preset number, can call the dome camera menu

Check and set the protocols, address, interface and baud, all must be consistent with the dome camera, then the IPC tester can test. After setting the parameter, the tester can control the PTZ and lens To control PTZ by screen touch:

Tap left, right, upward and downward on the touch screen to control the PTZ rotation direction. By two fingers move outward and inward on the touch screen to zoom in and out the PTZ.

PTZ Control:

Press the key \bigtriangledown \bigtriangledown \bigtriangledown \bigtriangledown \bigtriangledown \bigtriangledown control the PTZ direction of rotation
Press the key $(OPEN)$ or $(CLOSE)$, switch on or turn off the aperture.
Press the key $(FAR+)$ or $(NEAR-)$, adjust the focus manually
Press the key $(\overline{TEE^+})$ or $(\overline{WDE^-})$, manually adjust the zoom

2) Video and storage setting

Click icon "set", to enter and set analog video image brightness, contrast, color saturation, as well as the

file storage way after snapshot and recording, support auto-storage and manual storage.

When select manual storage, user can name and store the files.

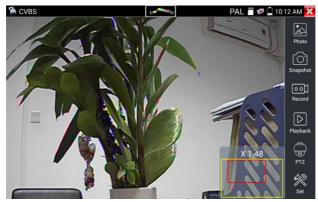

3) 4 x zoom image display and Video out

When image input, press () to enter "zoom", press it again to quit.

Using the touch screen to control PTZ camera movement:

Tap left, right, upward or downward on the video image to move the PTZ camera in a desired direction.

Stretch two fingers outward or inward on the touch screen to zoom the image in or out.

If not use touch screen to operate, press the key $(TELE^+)$ to zoom out , press the key $(WIDE^-)$ to zoom in, press upward and downward key to move the image.

For analog video input, as the resolution is 720*480, it is normal that the zoom in image is not

clear. But for network digital video input, as it supports resolution up to 1280*960, the zoom in image is still very clear. This is very helpful for IP camera installation.

4) Snapshot

Click the icon "Snapshot ", when the video in, to take a picture and save the current video frame in the SD card as JPEG file.

If the unit is set to the manual mode an "Input Name" pop up box will appear and you can enter a title for the snapshot. If the unit is set up to automatically set file names, this box will not pop up.

5) Video record

When you click the "Record" icon, video starts recording. A red recording icon appears on the screen and begins to flash and a timer appears indicating the time elapsed for the video. Click on the "Record" icon again to stop recording and save the video file to the SD card.

if select manual storage, before recording begins, appears dialog box "Input Name", user-defined the files name(by Chinese character, English letter, or digit) to store in SD card, tester will hereby store the files in SD card after recording. if select "Auto-storage", tester will auto store the files in SD card after recording.

(6)Photo

Click the icon "photo" to enter, click the selected thumbnail photo to display it on the screen. Double-tap the image you want to view to make it full screen. Double-click again the photo to return. To rename or delete an image, click and hold on the file until this screen below appears.

Click X to close and return to PTZ controller.

(7) Recorded video playback

Click the "Playback" icon to view your recorded videos. Tap on the video file image you want to watch.

To rename or delete a video, click and hold on the file until this screen appears:

Vide	o player		🐻 💷 又 🔒 9:09 AM 🔀
\bigcirc			9-09-43.mp4
		Rename	
		Delete	
		00000	

Video files also can play in the main menu "Video Player".

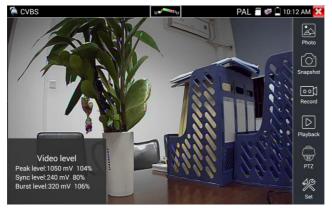

(8) Video level meter (*optional)

Click the icon to enter, the IP camera tester has adopted hardware high-speed sampling and

processing technology, can perform both NTSC and PAL video amplitude signal measurements for

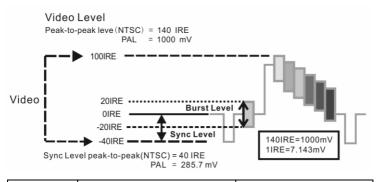

PEAK to PEAK, SYNC levels and COLOR BURST chroma level. When an analog signal is fed into

the meter, the tester displays the measurements on the bottom left corner of the screen

While in PAL format, the unit will be mV, While in NTSC format, it will be IRE.

	Video signal level	140±15IRE	
NTSC	Chroma level(COLOR BURST)	40±5IRE	
	SYNC signal level	40±5IRE	
	Video signal level	1000±200mV	
PAL	Chroma level(COLOR BURST)	300±35mV	
	SYNC signal level	300±35mV	

Video signal PEAK to PEAK level:

For NTSC format, the video signal level is 140±15IRE

For PAL format, the video signal level is 1000±200mV

If the level is too low, it will cause the image to lose quality and limit the distance it will travel over cable. If the level is too high, it will distort the image.

SYNC level: Tests the amplitude of the video sync pulse to verify if the video level is correct.

For NTSC format, the SYNC level is $40 \pm 5IRE$

For PAL format, the SYNC level is $300 \pm 35 \text{mV}$

If the level is too low, it will cause the image to not frame out properly. If the level is too high, it will lead to a poor quality image.

COLOR BURST level: Testing the color burst level will determine if the burst signal is sufficient to trigger the displays color producing circuit. Burst will diminish in amplitude over longer cable runs and can get fall below the threshold for the video display to show a color image.

For NTSC format, the Chroma standard level is 40 IRE

For PAL format, the Chroma standard level is 280mV

If the Chroma level is too low, the color will not be as deep, and some details of the image will become lighter. If the Chroma level is too high, there will be distortions on the image. If the coaxial cable is too long, it will reduce the chroma level.

Image loop test: Test video optical transmitter and receiver and video cable, connect one end to the tester "VIDEO OUT" port, and the other end connected to "VIDEO IN" port, the signal send via "VIDEO OUT" port, and received via "VIDEO IN" port, If the testing is ok, the tester displays several gradually dwindling photos on the desktop.

3.3.12 Color-bar generator (TV OUT)

Click **IIII** to enter, the tester sends the color bars from the "Video out" port, Click the icon "PAL", select "PAL/NTSC" output formats.

Output format: PAL Input format: PAL	🛄 TV OUT		🖱 🥺 📄 12:05 PM 🔀
	Output format:	PAL	Input format: PAL

Click the selected color-bars, testing image or single bar (red, green, blue, white or black). Double click to full display on the screen and output, click it return main menu.

Application

BNC loop test: Tester can send and receive color bar generator through the tester's "video out and video in" port, it is for testing transmission channels, such as video Optical, video cables etc. The tester "VIDEO OUT" port to connect optical terminal's sending port, and "VIDEO IN" port to optical terminal's connect its receiving port.

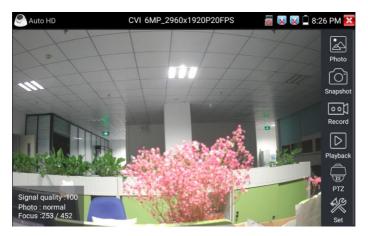

A. When maintaining the dome camera, the tester sends out the color bar by its BNC output to the monitor at the monitoring center. If the monitor receive the color bar, it means the video transmit channel works normally. Meanwhile on the basis of the received color bar, the monitoring center can judge if transmission has loss or interference.

- B. The tester sends out the pure color bar (such as white and black color), to test the monitor whether has bright or black dots
- C. The tester sends out video signal image to test if the image received by the monitor has excursion.

3.3.13 AutoHD (*Optional)

Auto-recognize the resolution and Auto-display the image of the connected camera. Support coaxial PT Z control and call OSD menu, support up to 8MP TVI/CVI/AHD and CVBS cameras.

3.3.14 HD Coaxial & Analog level test (*Optional)

Through hardware high-speed sampling and processing technology, accurately measure video peak level, sync level and burst level. It is used for level measurement of HD coaxial cameras, judge whether the working image of the camera and the image after attenuation by BNC cable transmission are normal, quickly detect and eliminate faults.

3.3.15 SDI Camera Test (*Optional)

SDI camera test, Dome camera test and PTZ control, click icon

When tester receives SDI camera image, it will display the image data.

Double-taps on the screen to make the image displayed full screen.

The tester supports resolution as follows:

1280x720P 25Hz, 1280x720P 30Hz, 1280x720P 50Hz, 1280x720P 60Hz, 1920x1080P 25Hz

1920x1080P 30Hz, 1920x1080I 50Hz, 1920x1080I 60Hz, EX-SDI: 2560x1440P /25/30FPS,

3840x2160 20/30FPS.

IPC tester's HDMI output port can be use as SDI to HDMI converter, output HD SDI image to HD TV monitor.

Select relative function on the right side Toolbar to operate, "Snapshot", "Record", "Photos ",

"Video playback", "PTZ control", "Video Brightness and Storage set", the operation is the same to the

video monitor function, please refer to the relevant instructions "3.3.1" in the manual.

Click or press (MENU) to quit.

3.3.16 CVI camera test (*Optional)

HD CVI camera, CVI dome camera test and PTZ control, click icon

to enter

When HD CVI signal input, the tester will display the image resolution on the top bar. Double-taps on the screen to make the image displayed full screen.

The tester supports resolution as follows:

1280x720P 25FPS / 1280x720P 30FPS / 1280x720P 50FPS / 1280x720P 60FPS / 1920x1080P 25FPS / 1920x1080P 30FPS/2560x1440P 25FPS/2560x1440P 30FPS/ 2592x1944P 20FPS / 2960x1920P 20FPS / 3840 x 2160P 12.5/15 FPS

- (1) PTZ control
- 1.1 Coaxial PTZ control

Click the icon"PTZ"on the right toolbar to do the corresponding setting.

"Port": select coaxial control

CVI		🐻 ự 📋 8:41 AM 🔀
	UTC RS485/RS232	

Enter PTZ address to perform parameters setting

Operation instructions, please refer to "3.3.1 PTZ (1) Video monitor test"

The PTZ address in the tester must be consistent with the dome camera or decoder, then the IPC tester can test. After setting the parameter, the tester can control the PTZ and lens.

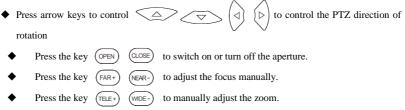

To control PTZ by screen touch:

Tap left, right, upward and downward on the touch screen to control the PTZ rotation direction, PTZ cameras will rotate accordingly. By two fingers move outward and inward on the touch screen to zoom in and out the PTZ.

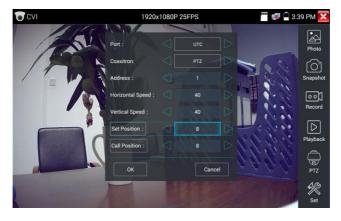

To control PTZ by key buttons

Set preset position

Setup preset position, move the PTZ camera to the preset position, the Tap it and input preset position number. Tap "Set position" to complete set preset position.

Call preset position

Tap the preset position:

Tap the preset position area, input preset position number. Tap "call position" to complete call preset position.

1.2 RS485 control

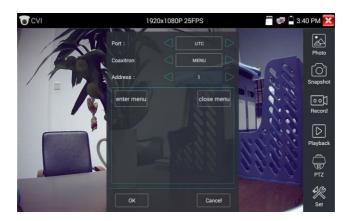

(1)Operation instructions, please refer to "3.3.1 PTZ (1) PTZ control parameters setting".

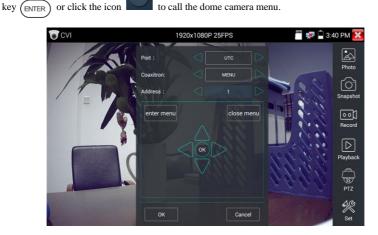

(2)Coaxial camera menu setting

Tap icon "UTC", select "menu setting" to enter the dome camera menu.

Input calling dome camera menu address code, after finishing the parameter settings, you can press the

WWW.RSRTENG.COM

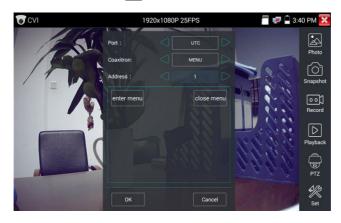

(3) Snapshot, record, photo viewer and video play back, please refer to "3.3.1 PTZ (1) Video monitor test".

Tap "close menu" or press the key " (ENTER)" to close camera menu.

(4) Save setting

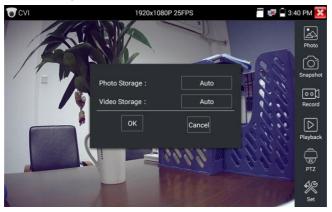

Click icon "Set" on the right toolbar to enter storage setting.

Support auto-storage and manual storage.

to enter

When select manual storage, user can name and store the files.

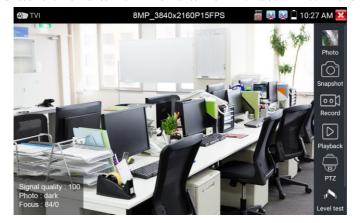

3.3.17 TVI camera test (*Optional)

HD TVI camera, TVI dome camera test and PTZ control, Click icon

The tester supports resolution as follows:

1280x720P 25FPS / 1280x720P30FPS / 1280x720P 50FPS / 1280x720P 60FPS

(2) PING Test

PING is the most conventional network debugging tool, it is used for testing if the connected IP camera or other network equipment's Ethernet port is working normally and the IP address is correct. Connect a network cable to the LAN port and click the PING of the property of the property of the property of the tester connects to the device, the send and receive packets will have a 0% packet loss.

Application: PING testing is the most conventional network debugging tools. It is used for testing if the connected IP camera or other network equipment's Ethernet port is working normally and the IP address is correct.

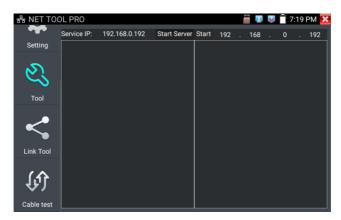

It's normal that the first data packet will be lost when test start.

(3) Network test (Ethernet bandwidth test)

To use the Network tester, you will need two IP testers. One is used as a Server and the other as a Client.

Both devices must be on the same network segment in order to communicate. Click the jicon to open the Network Tester app.

When test, need a tester or a computer installed Network Test Software as the Server, the other tester

sends packet test. The two testers must be in the same network segment.

a). Start the server: Click "Start Server" button to use the tester as a Server. It will display its IP

address at the top of the screen.

b). Start send packet test: Using the other IP tester, type in the Server's IP address at the top right corner of the screen. This app is used to send packets for network speed testing. Click the "Start" button to send the packets and start testing.

<u>۲۰</u>)									

(4) Port Flashing

Connect a network cable to the meter's "LAN" port, click the icon

to open the Port Flashing app.

Click "Start". The IP tester sends a unique signal to make the connected LAN port of the switch flash.

If the tester and PoE switch are connected well, the LAN port of POE switch flash at special frequency,

If not, no any changes on the LAN port

Application:

The tester will send special signals to make the connected LAN port flicker at special frequency, which will enable the installers to easily and quickly find the connected Ethernet cable. This function can prevent mistakenly insertion or disconnection non-corresponding cable to artificially interrupt network connection.

(5) DHCP server

Click on the DHCP icon to open the DHCP server app. Select the "Start" check box at the top and make any desired changes to the network settings. Click "Save" to start assigning dynamic IP addresses for

IP cameras and other networked devices. Click the "Refresh" button to check your Client list.

(6) Trace route

It is used to determine path of the IP packet access target.

Note: Trace route testing results only for reference, for accurate test route tracking, Please use

professional Ethernet tester.

Click 👝 to

to enter trace route

Input tracking IP address or domain name in the Remote Host IP. Set maximum hop count, normally

default is 30

Click "start" to trace the goal address

Tool			
<			
Link Tool			
(f)			_
Cable test	Stop	Add	Delete

Application:

Add an IP camera or other network device to the current network group, the new IP address must not be occupied, otherwise it will cause IP conflicts and stop the equipment normal working. Link monitor can check if the new setting IP address is occupied.

3.3.20 PoE power / DC12V 3A and DC 5V 2A USB power output

When the tester is turned on, the DC 12V and DC 5V power output functions are automatically turned on. If the IP tester is turned off, the DC 5V USB can still be used to power an external USB device. To use the PoE Power Output function, click on the icon and change the switch "ON" or "OFF". The IP camera needs to be connected to the LAN port before you turn PoE Power on. If the IP camera Supports PoE, the PoE power is delivered via pins 1, 2, 3, and 6 on the LAN port. The IP tester will display "48V ON" at the top of the screen when the POE power is still on.

- 1. Don't input power into the "DC12/3A OUTPUT" port.
- 2. Don't output this DC12V/3A power to the DC12V/IN port of the IP camera tester to avoid destroy
- 3. The IPC tester power output is close to 3A, if the IP camera's power is over 3A, the tester will auto enter protection mode. Disconnect all the connections of the tester and then connect the tester with power adaptor to resume the tester.
- Before turning on the PoE power output, please make sure the IP camera supports PoE power.
 Otherwise it may damage the IP camera.
- 5. Make sure you plug in your IP camera to the LAN port prior to turning on PoE power
- 6. Make sure the tester is full charged or more than 80% charged, otherwise the tester will shows "low power", "not able to supply power".

3.3.21 DC 24V 2A power output

The top and the bottom of the "DC24V ON/0W "is power output interface

Application: Power output function is mainly used in the camera field demonstration and testing, meanwhile, for some camera installation sites, if there is no power outlet, the tester can offer temporary power for the camera.

3.3.22 Cable Test

a. Don't input any power into the "DC24V/2A OUTPUT"port of the tester to avoid destroy.

Man-made damage is not within our company's warranty

- b. Don't output this DC24V/2A power to DC12V/ IN port to avoid destroy. otherwise the tester will damage, and man-made damage is not within our company's warranty.
- c. The IPC tester power output is close to 2A, if the IP camera's power is over 2A, the tester will auto enter protection mode. Disconnect all the connections of the tester and then connect the tester with power adaptor to resume the tester.
- Make sure the tester is full charged or more than 80% charged, otherwise the tester will shows
 "low power", "not able to supply power"

📴 Cable Tester		🐻 💷 😡 📋 7:40 PM 🔀
	kit#: 255	Cable Type : straight-through cable
Diagram of the cable sequence	Connection diagram	Create Report

Test LAN cable or telephone cable.

Connect LAN cable or telephone cable with the CCTV tester and cable tester. And then the connecting status, cable type and the sequence of wires as well as the serial number of the cable tester kit will be displayed.

The number of the cable tester is 255.

If need several different number other types cable testers, should pay the additional cost.

Visual judgment of network cable availability:

All sequence of cable is correct, generally corresponds to Gigabit straight/cross network cables.

Cable sequence is wrong, but the cable is still available, generally corresponds to 100M

straight-through/cross network cable.

X) All sequence of cable is wrong, not available.

Meter-end/cable tester-end fault location:

Tester-end/cable tester-end display"x", it means theRJ45 cable connector or within 1 meter from the RJ45 cable connector is faulty.

The middle part of sequence display "x", it means the RJ45 cable connector at the end of Tester/Cable tester is normal, and there is a breakpoint 1 meter away from the RJ45 cable connector.

The middle part of sequence is not communicated and not display "x", it means theRJ45 cable

connector at the end of Tester / Cable tester is faulty, and the middle of the cable is normal.

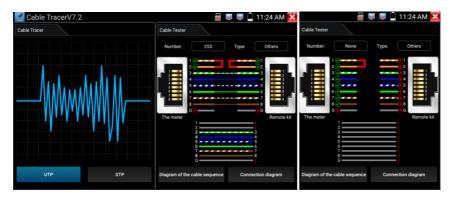

Tester-end can performRJ45 cable connector fault detection even when the remote end is not connected to the cable tester's UTP interface.

Diagram of the cable sequence	Good qu	ality cable		Poor quality cable		Wet cable	(2)

Advanced Test: Test cable pair status, length, attenuation, reflectivity, impedance, skew and other parameters.

Attenuation reflectivity: After link up, if reflectivity value is 0, it is the best quality communication **Impedance:** After link up, if the impedance value is 100Ω , it is the best quality communication, the range is generally in 85-135 Ω .

Skew: After 1000M link up, when skew value is 0ns, it is the best quality communication, if over 50ns, will cause a Bit Error Rate in the transmission.

Cable sequence diagram:

A straight- through and cross-over cable diagram, the cable sequence display for reference.

Click "Help" to check the instruction of all parameters.

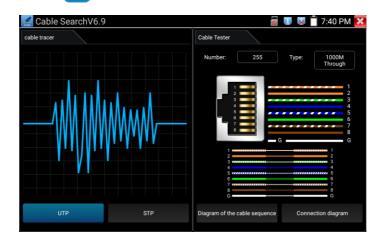

3.3.24 Cable Tracer (*Optional)

Connect tested cable or BNC cable to the UTP port or the CABLE SCAN (VIDEO OUT) port on the

bottom. Click icon

to enter, click the Number on the screen to adjust audio type.

UTP mode is used for searching the normal network cable or other cables. STP mode is used for searching the shielded network cable.

Rotating the switch of cable tracer to turn on. Clockwise rotation increases sensitivity, anticlockwise rotation reduce sensitivity.

Cable tracer and Cable tester can be tested at the same time. It is better to judge whether the search network cable is accurate. Connect the other end of the tested network cable to the "UTP" port of cable tracer, the cable sequence, continuity, test box number and network cable type will be displayed on the right side of the meter interface. The "G" indicates the continuity of the shielded network cable. The 1-8 indicators of cable tracer will flash according to the cable sequence. The DIRECT / CROSS / OTHER three indicator lights display the type of network cable directly.

Press the "MUTE" button of cable tracer for 2 seconds. After the "Di" sound, the silent mode is turned on. In the silent mode, can judge cable type according to the indicator light. Press the "MUTE" button again to exit the silent mode.

Application

It's convenient for people to find out the other end of the cable from the messy cables in security maintenance and network engineering.

While searching BNC cable, connect one port of the alligator clips to the copper core or copper net of the BNC cable, the other one to connect the earth wire (barred windows).

M Note: The battery of the cable tracer must according to corresponding positive pole + and

negative pole -, otherwise will damage the tester.

Note: While the cable tracer tester is receiving the audio signal from the tester, it may be influenced by other signals and make some noise.

3.3.25 TDR cable test (*Optional)

Note: The testing cable can't be connected to any equipment, otherwise it will damage the tester.

Connect Alligator clip cable to the TDR port, and the cable must connect well before testing, **otherwise** it will influence the accuracy. Built-in BNC cable, network cable, RVV control cable, Telephone line and TVVB cable etc can test. 11 groups user-defined cable can be set.

(1) Curved trajectory

1) Curve result analysis

Inflection point: The position of break point or short-circuit of the cable, is where curve suddenly rises

or falls after the smooth curve.

Short circuit: The curve shows an upward trend after the inflection point

Open (break point): The curve shows a downward trend after the inflection point

2) Curve operation

Zoom: Zoom the curve. Click icon "zoom", tap the curves by two fingers or use virtual keyboard (tap

the icon of the screen left edge, to call virtual keyboard)

Move: Move curve, click icon "move", and drag the curve to move.

Distance bar: Display the current length, and use the virtual keyboard to move distance bar.

Curve thumbnail: Double-click the thumbnail, to restore the scaled curve

(2) Calibration

Due to differences in production processes and materials, the cable impedance of different

manufacturers may be different, which will lead to large deviations in the test results. The Calibration function can be used at this time.

Click "Cable" "Type" to select cable and start testing. One tap on "Start", do one testing. If select built in cable type for testing, click "+" and "-" to adjust cable's wave speed.

"Cable", "Type" to select user-defined 1 for calibration, 11 groups user-defined can be set.

1. Select user-defined and click "Calibration" to enter test, click "user-defined 1" can define cable name, such as: AiPu BNC-5

2. Click "Cable", "Type" to select cable, and corresponding type, for example, if testing BNC cable,

select "BNC", if testing communication cable 75-2, select SYV 75-2.

3. Click "+" or "-" to adjust wave speed, while display length is the same with the actual Length, click

"Save" to save calibration data. It can be used for the same cable testing next time.

Application: TDR test is the use of pulse reflection method, to transmit pulse signal for tested cable, when cable is open circuit or short-circuit, reflected pulse is generated, the tester receives and deals with the reflected wave, measurement results displayed on the screen. TDR can test cable open circuit and short circuit, help engineer quickly find the cable's problem location. It is more convenient and efficient to repair the faulty cable.

ANote: The TDR reflect signal could be affected by the cable quality cable's not well connected etc to cause the different TDR measurement. The TDR measurement is for reference only.

3.3.26 BNC attenuation test (*Optional)

Introduction: Through hardware high-speed sampling and processing technology, the coaxial cable transmission attenuation value can be tested in real time, which can be used to detect the attenuation of the coaxial cable through long-distance transmission and the attenuation value of different cables but at the same distance, and can detect the quality of coaxial cable.

Test Methods:

1.Connect the two alligator clip cables to the CVBS IN port and CVBS OUT port separately. Two crocodile clips red to red and black to black clip together, then click "calibration" to calibrate it.

SECURITY CAMERA User Manual

2. After calibration, the red clip clips the copper core of the BNC cable, and the black clip clips the outer envelope of the BNC cable. attenuation value will be displayed after connection, as below:

3. Click "Reset", the application will restore factory defaults.

3.3.27 PoE Voltage test

Click icon 100

to enter PoE voltage measurement

PSE/PoE input	12V input	12V output
PSE / POE IN NETWORK/LAN	0 12V IN	12V OUT
¹ / ₂ + ⁴ / _{48.2} V ⁴ / _{48.2} V ⁴ / _{48.2} V		Ы
48.2 V 48.2 V	0.0V	12.2V
2.0W	0.0W	0.0W
	PSE / POE IN RETWORKLAM	PSL / Pol IN NETWORK/LAN IN 1 48.2 V 48.2 V 0.0V 3 48.2 V 48.2 V 0.0V

Connect a network cable from a PoE switch to the IP tester's PSE IN port. Connect an IP camera or other PoE using node to IP tester's LAN port, the PoE voltage and the cable's pin connection status show on the screen.

Note: This test if for measuring the voltage being drawn by the PoE node and the IP tester must be between the PoE switch and the PoE node for this test to work.

Note: The PoE switch must be connected to the PSE IN port. The powered device such as IP camera or other PoE node must be connected to the LAN port.

Note: Do not connect PoE power supply equipment (such as a PoE switch) to the tester's UTP/SCAN port, otherwise it will damage the tester.

PSE transmission

When PoE / PSE voltage testing, PoE/PSE conntect to the tester's PSE "IN" port, the camera connect to tester's LAN port, tester not only can transmit voltage to supply power for camera, but also transmit data at the same time. as well as the computer connect to the PoE/PSE, it can log in connected tester's PoE camera.

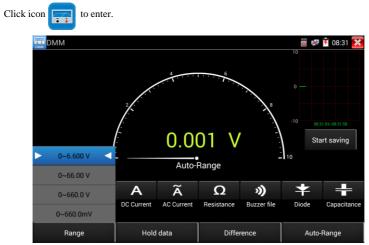

3.3.28 12V power input test

Connect 12V power adaptor to tester's charging port, then click icon "PoE" to enter voltage measurement app, screen show the current adaptor input voltage and power. Note: the current 12V input measured power is the battery charging power and the device working power, the measured power will change depending on the different of battery power and backlight brightness.

Warning: Not allow connect device with input power over 17V to tester "12V IN" port, otherwise it will damage the machine.

3.3.29 Digital Multi-meter (*Optional)

SECURITY CAMERA User Manual

1) SYMBOLS:

U: DC Voltage Measuring	A: DC Current Measuring
Ω : Resistance Measuring	↓ : Diode Testing
U: AC Voltage Measuring	à AC Current Measuring
)): Continuity Testing	+: Capacitance Measuring

AC/DC	Voltage and current measurement state display
Auto- range	The Multimeter auto adjust the range by input signal or tested components
Data hold	Hold data
Relative	Display the relative measurement value
measurement	Press the key to change display state
10A socket	In 10A current measurement state ,indicate use 10A socket
0	The current measurement value over the range, if in the Auto range state, to
Over range	switch Auto.

2) OPERATING INSTRUCTION

A. DC Voltage Measuring

WARNING!

You can't input the voltage which more than 660V DC, it's possible to show higher voltage, but it's may destroy the inner circuit.

Pay attention not to get an electric shock when measuring high voltage.

a. Connect the black test lead to the "COM " jack and the red test lead to the "V/ Ω " jack.

b. Select U, enter the DC voltage measurement.

c. the tester default Auto range status ,by click "DC auto range", press the

key can select manual range and restore auto range .

Manual range: $0.000V \rightarrow 6.600V$ range $00.00V \rightarrow 66.00V$ range

000.0V → 660.0V range

000.0mV → 660.0mV rang

B. AC Voltage Measuring

WARNING!

You can't input the voltage which more than 660V AC, it's possible to show higher voltage, but it's may destroy the inner circuit.

Pay attention not to get an electric shock when measuring high voltage.

a. Connect the black test lead to the "COM" jack and the red test lead to the "V/ Ω " jack.

- b. select U ~~ ~ , enter the AC voltage measurement.
- C. The tester default Auto range status, by click "AC auto range"
- d. Manual range can be select, press the key "NEAR" to restore Auto range
- e. Manual range: 0.000V → 6.600V range

 $\begin{array}{rcl} 00.00V \rightarrow & 66.00V \text{ range} \\ 000.0V \rightarrow & 660.0V \text{ range} \end{array}$

 $000.0 \text{mV} \rightarrow 660.0 \text{mV}$ range

C. DC Current Measuring (only manual range)

WARNING!

Shut down the power of the tested circuit, and then connect the meter with the circuit for

measurement.

a. Connect the black test lead to the "COM " jack and the red test lead to the "mA" jack for a maximum of 660mA current. For a maximum of 10A, move the red lead to the 10A jack.

b. Select A, enter the DC current measurement, the screen display"DC current ", can select manual

range.

- c. Manual range: $0.000 \text{mA} \rightarrow 6.6 \text{mA}$ range $00.00 \text{mA} \rightarrow 66.00 \text{mA}$ range $000.0 \text{mA} \rightarrow 660.0 \text{mA}$ range $00.00 \text{A} \rightarrow 10.00 \text{A}$ range (use 10 A socket) Black lead Red lead Red lead
- d. Select the range to enter current measurement

- When only the figure "OL" is displayed, it indicates over range situation and the higher range has to be selected.
- When the value scale to be measured is unknown beforehand, set the range selector at the highest position.
- The maximum current of mA socket is 660mA, over-current will destroy the fuse, and will damage the meter.
- The maximum current of 10A socket is 10A, over-current will destroy the meter, and will damage the operator.

D. AC Current Measuring (Only Manual range)

WARNING!

Shut down the power of the tested circuit, and then connect the meter with the circuit for measurement.

a. Connect the black test lead to the "COM" jack and the red test lead to the "mA" jack for a maximum of 660mA current. For a maximum of 10A, move the red lead to the 10A jack.

b. Select \widetilde{A} , enter the AC current measurement, manually select the range.

c. Manual range: 0.000mA → 6.600mA range 00.00mA → 66.00mA range 000.0mA → 660.0mA range 000.00A → 10.00A range (use 10A socket)

- When only the figure "OL" is displayed, it indicates over range situation and the higher range has to be selected.
- When the value scale to be measured is unknown beforehand, set the range selector at the highest position.
- The maximum current of mA socket is 660mA; over-current will destroy the fuse, and will damage the meter.
- The maximum current of 10A socket is 10A, over-current will destroy the meter, and will damage the operator.
- ◆ In" AC " mode, only can input "AC ", if not, will damage the meter.
- E. Resistance Measuring

WARNING!

When measuring in-circuit resistance, be sure the circuit under test has all power removed and that all capacitors have discharged fully.

a. Connect the black test lead to the "COM " jack and the red test

lead to the "V/ Ω " jack.

b. Select $\Omega,$ enter the Ω measurement

the tester default Auto range status, Press the key manually select

range, press "NEAR" to restore "Auto range"

SECURITY CAMERA User Manual

Manual range: (Connect the red lead to black leads, will display the measure range)

000.0Ω	\rightarrow	660Ω range
0.000 ΚΩ	\rightarrow	$6.600 \mathrm{K}\Omega$ range
00.00 ΚΩ	\rightarrow	66.00K Ω range
000.0 ΚΩ	\rightarrow	660.0K Ω range
0.000 MΩ	\rightarrow	$6.600 M\Omega$ range
00.00 MΩ	\rightarrow	66.00MΩ range

F. Continuity Testing

WARNING!

When testing the circuit continuity, be sure that the power of the circuit has been shut down and all

capacitors have been discharged fully.

a. Connect the black test lead to the "COM" jack and the red test lead to the "V/ Ω " jack.

b. Select), enter the continuity test, Connect test leads across two point

of the circuit under testing.

c. If continuity exists (i.e., resistance less than about 50Ω), built-in buzzer will sound.

G. Diode Testing

WARNING!

The capacitance of a capacitor should be tested separately, should not test in the installation of circuit.

a. Connect the black test lead to the "COM" jack and the red test lead to

the "V/ Ω " jack. (the red lead anode "+")

- b. Select \checkmark , enter the diode testing.
- c. Connect test red lead across to the anode, the black lead to the

cathode of the diode under testing.

d. Connect test red lead across to the cathode, the black lead to the anode of the diode under testing.

e. Tested diode, forward voltage low 30m, there is sound indication, then can finish the testing quickly without view the screen.

H. Capacitance Measuring

WARNING!

To avoid electric shock, be sure the capacitors have been discharged fully before measuring the capacitance of a capacitor.

a. Connect the black test lead to the "COM " jack and the red test lead to the "V/ $\!\Omega$ " jack.

b. Select "+", enter the capacitance measurement.

Manual range

c. The tester default auto range status, and manual range by press upward and downward key, Auto rang

by press the key "NEAR"

: 0.000nF	\rightarrow	6.600nF range
00.00nF	\rightarrow	66.00nF range
000.0nF	\rightarrow	660.0nF range
0.000uF	\rightarrow	6.600μF range
00.00uF	\rightarrow	66.00μF range
000.0uF	\rightarrow	660.0μF range
0.000mF	\rightarrow	6.600mF range
00.00mF	\rightarrow	66.00mF range

d. Before connect test leads across two sides of the capacitor under measurement, be sure that the capacitor has been discharged fully.

- The capacitance of a capacitor should be tested separately, should not test in the installation of circuit.
- b. To avoid electric shock, be sure the capacitors have been discharged fully before measuring the ca pacitance of a capacitor.

c. While testing the capacitance of a capacitor to 660uF, the Max time will be 6.6 seconds, if the cap acitor is leaked or damaged, the data can't be read.

The tester will be normal after disconnecting the capacitor.

Manual range and Auto range

When testing, click "Range select" to change the value, click "Auto range" to enter Auto

measurement.

Data hold

Click "Hold data" to enter, the data be hold, the value is green. Press it again to quit.

Relative value measurement

Click "Relative "to enter, the tester Auto-save the data, the displayed new measurement and relative value is red color. Press it again to quit.

The hold function and the relative value be combined use, the display value is yellow

The meter protection

Voltage protection

You can't input the voltage which more than 660V AC, it's possible to show higher voltage, but it's may destroy the inner circuit.

> Resistance, Continuity, Diode, PTC component Protection

Wrong input voltage, will Auto enter protection state , It only suitable for short and limit time work.

If input voltage over 600V, will damage the meter.

MA current fuse range: 250V 1A

if the current over the rated range ,fuse will melt to protect the meter .Pls use the same model when

change the fuse, Pls opens the battery cover to change.

Note: 10A socket without fuse protection, if over the current range Wrong using the 10A socket to measure the voltage, will damage the meter.

3.3.30 Optical power meter (*Optional)

to enter ,with five wavelength 1625nm,1550nm, 1490nm, 1310nm,1300nm, 850nm, Click icon linear or nonlinear optical power display, both for optical power testing and Fiber link loss relative measurement. It is necessary tool for installation and maintenance optical fiber communication, cable television and CCTV security system.

Note: Please keep the fiber connector and the dust cap be clean, and clean the detector with the special alcohol.

Data hold

While testing, click "Hold" to data hold, the data will not change. It's convenient to read. Press again to quit.

Click "Setting" to choose the baud rate of RS485, it must be the same as the DVR or the Control keyboard. The DVR or Control keyboard send the code to the tester, if it can be read, the protocol will

shown on the upper right, like Pelco D, if not, like P:---

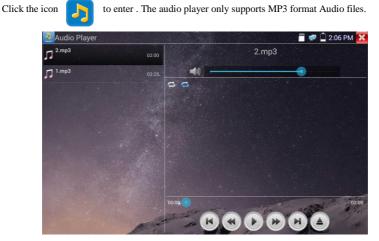

While the tester receives the code, press the **CLOSE** RETURN key to empty.

Though the RS485 port, display the PTZ control code of the multifunctional keyboard or the DVR. Controller can check the status of the RS485 transmission through the code on the display. (The RS485 communication rate must be the same.)

Application: Check the RS485 communication states of the video optical transmitter whether normal. Engineer can analyze the protocol and check the data through the displayed code.

3.3.34 Audio player

3.3.35 Media Player

The Media player can browse video and image files. It supports the video formats of MP4, H.264, MPEG4, and MKV. The IP tester recorded files can play directly via the Media player. The Media player will automatically display the video files from the SD card. Click on the desired file to play. Click RETURN to exit.

To rename or delete an existing file, press the file name for a few seconds until the screen below appears. You can then rename or delete the file by pressing the desired option.

Video player			8 💷 又	9:09 AM 🔀
