

Fault Handling

If All LED are not on, please check:

- ▷ Whether the power supply and distribution are normal;
- ▷ Whether the branch breaker is tripped, and close the breaker after troubleshooting;
- ▷ Whether the connection is correct; if the cable comes off, it should be properly reconnected and tightened.

The charger is automatically protected in the event of a fault. The fault information and handling methods are as follows.

Indicator Twinkle	Fault Code	Handling Method
• 1×slow, 1×fast	Fault code 11: CP voltage anomaly	<ul style="list-style-type: none"> • Check the connection of charging plug and socket. • Disconnect and reconnect the charging plug.
• 1×slow, 3×fast	Fault code 13: Undervoltage input	<ul style="list-style-type: none"> • Check whether input plug is reliably connected. • Check whether the input voltage is abnormal.
• 1×slow, 4×fast	Fault code 14: Overvoltage input	<ul style="list-style-type: none"> • Check whether the input voltage is abnormal.
• 1×slow, 5×fast	Fault code 15: Over-temperature protection	<ul style="list-style-type: none"> • Check whether the charger is covered or installed in a high temperature environment.
• 1×slow, 6×fast	Fault code 16: Metering fault	<ul style="list-style-type: none"> • Power off and restart the device.
• 1×slow, 7×fast	Fault code 17: Leakage protection	<ul style="list-style-type: none"> • Check whether the charging plug, charging cable and EV socket are damaged or wet. • Power off, disconnect and reconnect the charging plug and restart.
• 1×slow, 8×fast	Fault code 18: Output shortage	<ul style="list-style-type: none"> • Check whether the charging plug and its cables are damaged or wet.
• 1×slow, 9×fast	Fault code 19: Output overcurrent	<ul style="list-style-type: none"> • Check whether the charging connector is correctly connected. • Check whether the OBC is normal. • Check the set of output maximum current.
• 2×slow, 1×fast	Fault code 21: EV response timeout	<ul style="list-style-type: none"> • Battery of EV is full or the charging plug is not properly connected. • Disconnect and reconnect the charging plug.
• 2×slow, 2×fast	Fault code 22: EV not supported	<ul style="list-style-type: none"> • This EV does not meet the SAE J1772 and cannot be charged.

<ul style="list-style-type: none">• 2×slow, 3×fast	Fault code 23: Relay sticking	<ul style="list-style-type: none">• The device is damaged and needs to be returned to the factory for repair.
<ul style="list-style-type: none">• 2×slow, 4×fast	Fault code 24: CCID sensor fault	<ul style="list-style-type: none">• The sensor is damaged and needs to be returned to the factory for repair.
<ul style="list-style-type: none">• 2×slow, 5×fast	Fault code 25: Ground fault	<ul style="list-style-type: none">• Charger is not grounded; input power socket and input plug need to be checked.
