

## Preface

Thank you for choosing Yeewise security & surveillance products! By purchasing a Yeewise product, you receive a one (1) year warranty covering manufacturing defects in material and workmanship.

This user manual is to introduce the operations of Yeewise PTZ WiFi camera systems in more details. If there is any other question which is not covered in this user manual, please contact Yeewise support at <u>support@yeewise.com</u>.

## Statement

• Though we apply all efforts to make the manual complete and accurate, there could still be some discrepancies due to products' timely update.

· The products and manual are subject to change without previous notification.

 $\cdot$  The content in this manual is only for users' reference. We don't promise it's exactly the same with the products you purchase. Detailed information is in accordance with the final products.

 $\cdot$  The accessories and parts mentioned in this manual are only for product using guide purpose and not necessarily to be included in your purchased item.

## **Special Statement**

Please comply with local laws and regulations when you use the surveillance devices.

## **About Default Settings**

- $\cdot$  The default username for NVR is admin (admin is the super administrator ID)
- · The default password for account admin is empty, means no password.
- · The default IPv4 address of NVR is: 192.168.1.114
- $\cdot$  The default setting of NVR is to overwrite oldest recorded videos when hard drive is full.
- $\cdot$  The device will start Setup Wizard by default when NVR is powered on.
- $\cdot$  The default NVR resolution is 1280 x 1024.

#### THIS MANUAL WAS ACCURATE AT THE TIME IT WAS COMPLETED. DUE TO OUR ONGOING EFFORT TO CONSTANTLY IMPROVE OUR PRODUCTS, FUNCTIONS MAY HAVE BEEN ADDED OR CHANGED.

## **Chapter 1:** FCC Warnings

## **FCC Radiation Norm**

## FCC

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference and (2) this device must accept any interference received, including interference that may cause undesired operation.

## **FCC Compliance Statement**

These limits are designed to provide reasonable protection against frequency interference in residential installation. This equipment generates, uses and can radiate radio frequency energy and if not installed or used in accordance with the instructions, may cause harmful interference to radio communication. However, there is no guarantee that interference will not occur in television reception, which can be determined by turning the equipment off and on. The user is encouraged to try and correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

## CAUTION

The Federal Communications Commission warns the user that changes or modifications to the unit not expressly approved by the part responsible for compliance could void the user's authority to operate the equipment.

## **Chapter 2:** Safety Instructions

#### • Use the provided power adapter.

Do not use this product with a power source that applies more than the specified voltage.

• Never insert metal into the NVR case or its openings. Inserting metal into the NVR case may cause electric shock.

#### • Do not operate in wet or dusty areas.

Avoid placing the NVR in areas such as a damp basement or dusty attic.

• **Do not expose the NVR to rain or use near water.** If the NVR accidentally gets wet, unplug it and contact technical support immediately.

#### • Keep product surfaces clean and dry.

To clean the outside case of the NVR, use a lightly dampened cloth. Do not use cleaning solutions or solvents.

#### • Do not install near any heat sources.

Do not install the NVR near any heat sources such as stoves, heat registers, radiators, or electronics (including amplifiers) that produce heat.

#### • Unplug the NVR when moving it.

Make sure that the NVR is unplugged before you move it. When moving this device, be sure to handle it with care.

#### • Make sure there is good air circulation around the NVR.

This NVR uses an internal hard drive, which generates heat during operation for video storage. Do not block vents on the NVR, as these vents reduce the generated heat while the system is running. Place this product in well-ventilated area.

#### • Do not attempt to remove the top cover.

If you observe any abnormal operation, unplug the NVR immediately and contact technical support. Do not attempt to open the NVR to diagnose the cause of the problem.

#### • Handle the NVR carefully.

If you drop the NVR on any hard surface, it may damage the device. If the NVR doesn't work properly due to physical damage, contact an authorized dealer for repair.

#### • It is recommended to use your NVR with an uninterruptible power supply (UPS).

Connecting your NVR and cameras to a UPS allows continuous operation even during power outages. The run-time duration will depend on the rating of the UPS used.

## **Chapter 3:** Product Overview

## **3.1 Introduction**

This Yeewise network video recorder is our new generation of NVR. It supports wireless WiFi network video input, real time live view, video playback, and video backup. The NVR system can be widely used for surveillance of home, business, office, villa, etc.

## **3.2 System Requirements**

#### Please be sure that your PC/MAC® complies with the following specifications:

- PC Operating System: Windows® 7, Windows® 8/8.1 and Windows® 10
- PC Browser: IE® 8 and above
- MAC Operating System: MAC OS X® 10.7 and above

#### Please be sure that your mobile device complies with the following specifications:

- Android<sup>TM</sup>: 4.0 and above
- iOS®: 7.1 and above

## **3.3 Package Contents**

- 8CH HD Dual WiFi NVR with pre-installed 1TB Hard Drive
- 2x NVR Antennas
- 4x 3MP Pan Tilt WiFi Cameras
- Camera Antennas (1 per Camera)
- 12V 2A DC Power Adapter for NVR
- 12V 1A DC Power Adapters with 10ft Cable for Cameras (1 per Camera)
- 1 x RJ-45 Ethernet Cable
- 1x USB Mouse
- Mounting Screws
- Quick User Guide

## **3.4 Product Key Features**

• Auto-Pair, Plug and Play: NVR and cameras are paired well in default, once you connect NVR to monitor/TV, plug them to power, you see cameras video on monitor/TV in minutes.

• **Dual Wi-Fi:** The NVR has two Wi-Fi modules inside, one for connecting cameras and the other for connecting system to Internet. Cameras connect to NVR's own WiFi so they won't use your home network bandwidth. NVR supports connecting to Internet wirelessly over Wi-Fi.

• **AUTO Wi-Fi Relay:** The Yeewise auto WiFi relay tech uses cameras in middle as repeaters. When a camera is having weak wifi signal, NVR auto sets a close-by camera as Wi-Fi repeater, connect the camera with weak signal to this wifi repeater camera, then to NVR. This helps boosting the cameras' wifi range.

• Works without Internet: This system is standalone wireless camera system, it works good even without Internet. So, Internet is not needed to run this system up. Without Internet, you can live view, record, playback and backup videos. The only thing you can't do without Internet is remote access the cameras from mobile phones or computers.

• Easy Remote Access: This wireless camera system allows you to view, playback and control the cameras remotely from your iPhone, android phone, tablets, laptop, PC and MAC. Yeewise provides free mobile app for phone viewing and CMS for computer viewing.

• Smart Motion Alerts: Supports email alerts with snapshots and mobile push notifications when motion is detected.

• **Pan Tilt WiFi Cameras:** Rotate 180° horizontally and 65° vertically for wide-range area monitoring, being able to pan left and right, tilt up and down, these security cameras can nearly provide complete coverage. You can control the camera movements from PC, NVR and App.

• Auto Tracking: With auto tracking feature, this wireless pan tilt camera automatically tracks and follows the moving object when motion is detected. In addition, you can create several presets to quickly re-call specific positions.

• Auto Color Night Vision: These WiFi cameras are equipped with infrared LEDs, providing B/W video, and additional floodlights for full color night vision. You can choose the lighting mode(Infrared, Full Color, Intelligent) in the NVR and app. With Intelligent mode, the cameras use IR LEDs and turn on floodlights automatically in the event of an intrusion providing the color shot of the intruder and additional deterrent effect on intruders.

• Auto Floodlights & Siren: The floodlights and siren alarm can be set to automatically turn on when moving objects detected in the darkness, to scare unwanted intruders away. These security cameras will deliver color night vision videos at night when floodlights are on, this helps you to obtain more detailed evidence. Alarm siren can be set to triggered automatically when activity occurs or manually via the app.

• **Two-way Audio:** A built-in speaker & microphone let you enjoy fast and convenient communication with your family or pets when you work or travel outside.

• Multiple Recording Modes: Supports manual, continuous, time-scheduled, and motion detection recording.

• Pre-recording: Start recording 10 seconds before motion is detected. See the whole event from beginning to end.

• Video backup with USB: Backup important videos by plugging a USB flash drive into the USB port of the NVR. Video files are exported in a standard AVI format and can be played with common video players such as VLC.

• VGA and HDMI Video Outputs: Supports connecting to any standalone VGA or HDMI monitor, or TV.

• All Functions One Click Away: This WiFi kit is packed with features yet easy to use and configure with the on-screen menu. All operations can be done with the supplied mouse. You can WATCH the live video of all cameras on the screen and CONTROL them to rotate. You can CHOOSE among several display modes and ZOOM IN by dragging the mouse. The OSD menu allows you to CONFIGURE all NVR options and PLAY BACK the recorded videos, searching by date and time.

## **Chapter 4:** Operation Instructions

## 4.1 NVR Diagram

Rear View

- 1. Audio Output Allows for the connection of an amplified speaker.
- 2. VGA Video Output Connect the VGA cable from the VGA output port on the NVR to the VGA input port on your TV/Monitor. (VGA cable not included)
- **3. HDMI Video Output -** Connect the HDMI cable from the HDMI output port on the NVR to the HDMI input port on your TV/Monitor. (HDMI cable not included)
- RJ-45 (Ethernet) Port Connect NVR to router with network cable for remote access (This NVR also supports connecting to router wirelessly over WiFi.). Pair add-on cameras to this NVR (You can also add new cameras to this NVR wirelessly).
- 5. **USB Ports -** USB ports allow for the connection of a USB mouse and/or a USB flash drive. You will connect the included USB mouse to assist you in navigating the NVR's menu interface. You will connect a USB flash drive to download video files from the NVR for long term storage or sharing.
- 6. **Power Input -** Power input is used to connect the included 12V DC power supply.
- 7. NVR Antenna Mount For installation of two included NVR antennas.

**NOTE:** The maximum number of cameras you can connect to your wireless NVR will be determined by the number of channels.

## 4.2 Camera Diagram

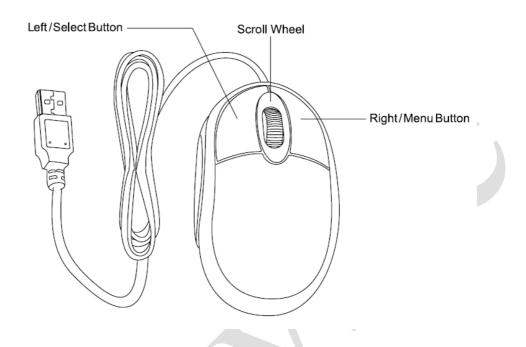

- 1. Infrared LEDs: Camera sees up to 80ft at night.
- 2. Floodlights: Camera delivers color night vision when floodlights are on.
- 3. Lens: Different lens gives you different viewing angle.
- 4. Microphone & Speaker: Hear the voice and speak to the person in front of the camera.
- 5. Lens: 3MP High Definition
- 6. Antenna: Receives WiFi signals from NVR.
- 7. Pan Tilt Joint Structure: Control the camera to move left and right, up and down.
- 8. Ethernet Port: Pair camera to NVR while needed.
- 9. Reset: Long press to reset the camera.
- 10. 12V DC In: Power on the camera using included power adapter.

**NOTE:** Connect all cameras locally before final placement to ensure that all components function properly.

## **4.3** Mouse Operation

#### Live Viewing:

Double-click the left button on any camera view in split-screen mode to bring it to full screen display. Double-click again to return to split-screen mode.

Click the left button on any camera view in split-screen mode to show the channel toolbar menu. Right-click to hide the icons.

Right-click to show the NVR main menu. Right-clicking again will hide the NVR main menu.

#### In Setting:

Left-click to make a selection.

Right-click to cancel setting or return to previous screen.

#### **To Enter Values:**

Move the cursor to a blank field and click the mouse. A virtual keyboard will appear which supports numbers, letters, and symbols. The Shift function will access symbols in addition to upper case letters.

| Apply   | Apply   | Save the setting and stay at the window (Save and Continue). |
| Copy to | Copy to | Allow you to copy similar settings to multiple channels.     |

## **Chapter 5**: Installation & Connection

### **5.1 Installation Precautions**

Please refer to below tips while install and use the device:

1. To extend the life of the device, please keep the device away from water, high temperature, and dust. Use it in a well-ventilated place.

2. Please use SATA hard drive, USB devices and mouse purchased from authentic channels.

3. Before use, please ensure the NVR has correct ground connection. Power source should not exceed the indicated normal working voltage range in the specs sheet.

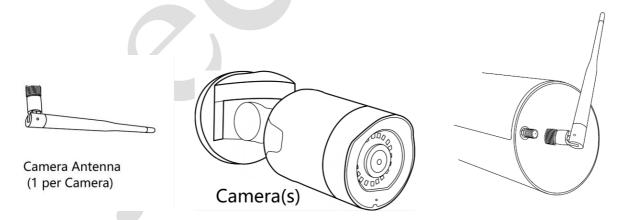

4. Do not place near high voltage wires or other sources of electrical interference. Electrical interference will degrade the quality of the signal.

## **5.2** Camera Installation

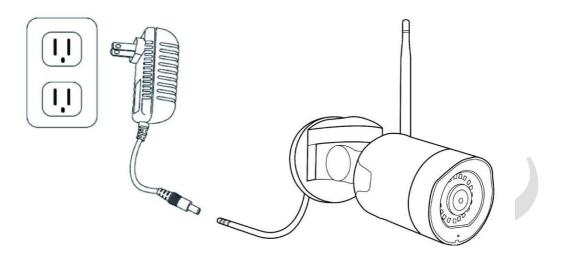

5.2.1 Power on the cameras

**NOTE:** Connect all cameras locally before final placement to ensure that all components function properly.

1. Locate the antenna included with each camera.

- 2. Fasten the antenna to the camera.
- 3. Locate the camera power adapter included and connect it to a surge protector, UPS or wall outlet.
- 4. Connect the camera power adapter to camera's power port.
- 5. Repeat for each camera.

#### 5.2.2 Mounting the cameras

#### • Camera distance from NVR.

Your wireless IP cameras will reach up to 3-400ft. wirelessly. Therefore, proper placement of the wireless NVR in your home will help ensure you achieve maximum coverage.

- Do not place near high voltage wires or other sources of electrical interference. Electrical interference will degrade the quality of the signal.
- Place camera out of reach to avoid vandalism.

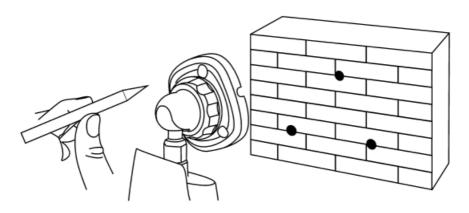

#### • Avoid direct exposure to weather.

Do not place the camera where rain or snow will hit the lens directly nor should the camera be placed so that the sun or bright light shines directly into the lens. Your camera is weatherproof, but it will not work when submerged in water. Ensure that all power and video connections are not directly exposed to water and are protected from the elements.

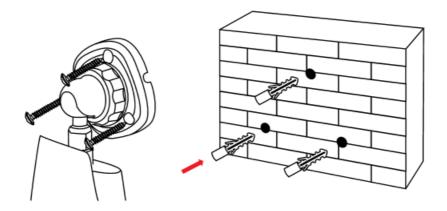

#### • Mounting Surface.

The mounting surface must hold at least four times the camera's total weight.

- 1. Locate a camera and choose a location where you would like to mount the camera.
- 2. Indicate screw positions by marking three holes on the surface where you plan to mount the camera, using the holes in the camera base as a guide.

- 3. Using a drill bit slightly smaller than the included screw anchors, drill into the mounting surface using the guide marks you placed in the previous step.
- 4. Insert the screw anchors.
- 5. Line up the camera base holes with the screw anchors. Holding the base in place, insert screws and tighten until secure.

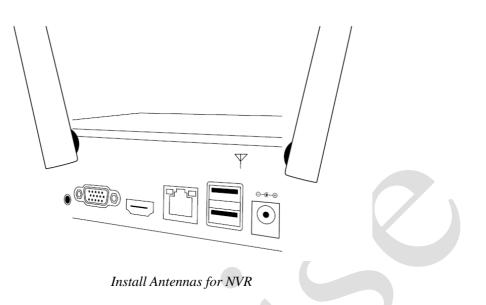

- 6. Once the base is screwed in place, make sure that the camera is securely mounted by placing gentle pressure on the mount.
- 7. Adjust the camera housing to point in the direction of the area you would like to monitor.

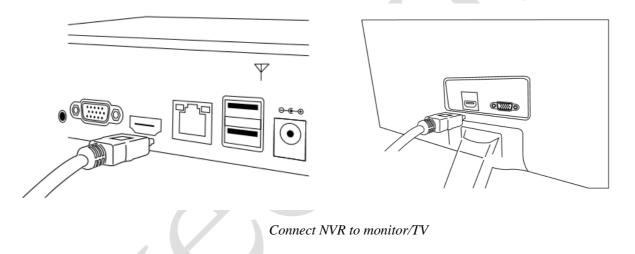

## **5.3 NVR Installation**

### 5.3.1 Connecting Your Wireless NVR

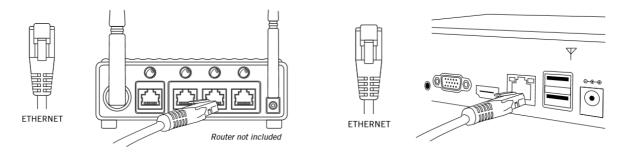

1. Connect the two included antennas to your wireless NVR. This will ensure you achieve the maximum wireless range for transmission from your wireless cameras.

2. Connect NVR to a standalone PC monitor or TV using VGA or HDMI cable (VGA & HDMI cable not included).

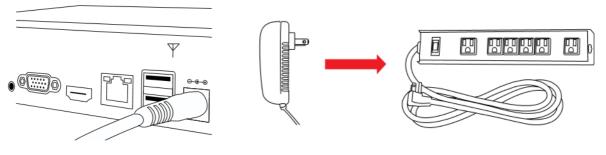

- 3. Plug one end of the included Ethernet cable into the WAN port on the back of the Wireless NVR.
- 4. Plug the other end of the Ethernet cable into a port on the back of your router.

Connect NVR to router for remote access

5. Connect the Wireless NVR to power using included 12V 3A DC power adapter.

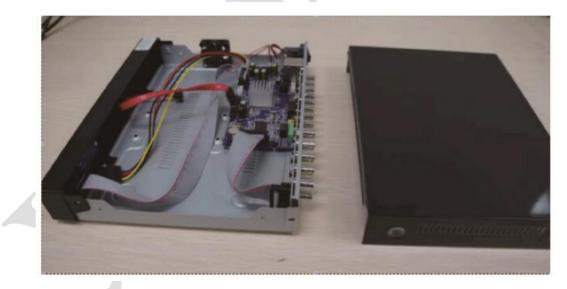

Connect NVR to power

6. You should see each camera appear on your TV/Monitor. You may now proceed to install your Wireless NVR cameras in the desired location.

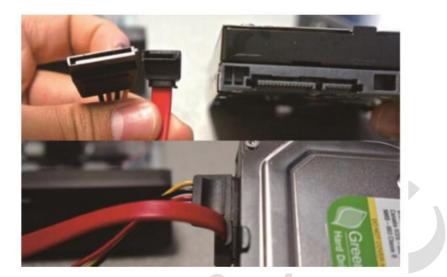

## **5.4 Install Hard Drive**

You'll need to add a SATA HDD to the wireless NVR and format it to start recording. If your system comes with hard drive pre-installed, then you only need to format the hard drive to start recording.

1. Unplug your wireless NVR from power, unscrew and remove the NVR top cover.

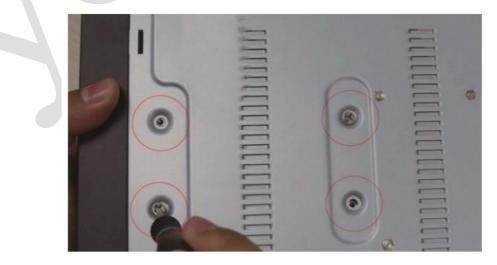

2. Connect the SATA power and data cables from NVR to the corresponding ports on your hard drive.

3. Place the hard drive into the NVR. Any cables should cross up over the HDD.

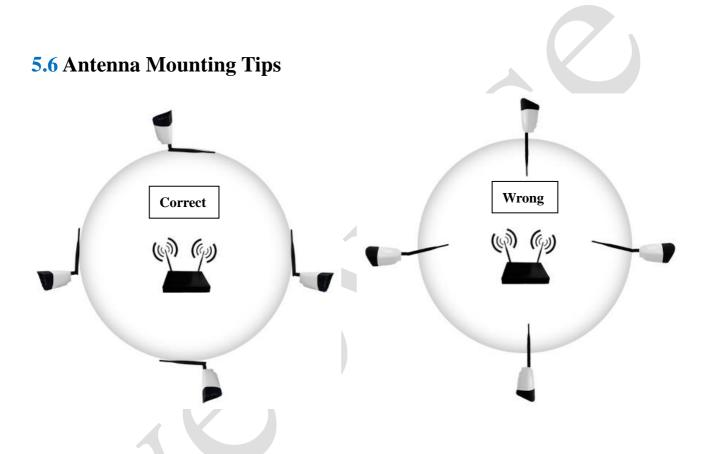

4. Holding the hard drive and NVR, gently turn it over and line up the holes on the hard drive with the holes on the NVR. Using a screwdriver, screw the provided screws into the holes. Assemble the cover.

## **5.5** Camera Mounting Spots

- 1. Mount the cameras anywhere within the Wi-Fi range, plug them to power with included power adapters (smaller ones are for cameras).
- 2. The cameras should start to stream videos to NVR within 1 minute.
- 3. If it does not display video on the NVR's screen, the distance should be too long or there are too many obstacles. Please move the cameras closer to the NVR.

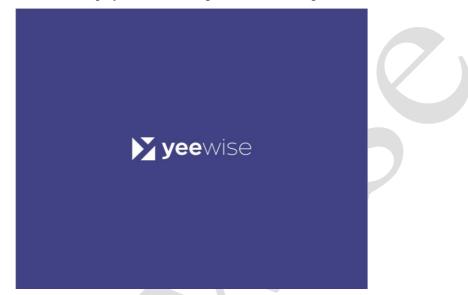

The NVR's antennas radiate signals to all around. The signal pick-up is best while antennas are on same height and parallel. If the cameras cannot be at same height with NVR, please keep their antennas parallel.

## **Chapter 6:** Getting Started

## 6.1 Setup Wizard

When your NVR is powered on it will display the Yeewise logo while initializing.

After initialization, you will be prompted to enter Setup Wizard automatically, and guide you to do basic settings. You can also click "Exit" to skip it.

## 6.1.1 General Setup

| _ |             |                    |                       |       |

|   |             |                    |                       |       |
|   |             |                    |                       |       |
|   |             |                    |                       |       |
|   |             |                    |                       |       |
|   |             |                    |                       |       |
|   |             |                    |                       |       |
|   |             |                    |                       |       |
|   | Exit        |                    |                       | Next  |
|   |             |                    |                       | rickt |

General Setup allows you to set up NVR's language, time zone, and date format. You may choose to use Network Time Protocol (NTP) to auto-configure the current date and time. To use NTP, check the Enable box next to **Sync Time**, then click **Apply**.

**NOTE:** If you don't want to go through Setup Guide once again when system reboots, please uncheck Enable next to Setup Guide.

6.1.2 Wireless Setup

| Set                    | rup Wizard - Wireless Setup |          |      |  |
|------------------------|-----------------------------|----------|------|--|
| WiFi Channel<br>Region | 4<br>FCC                    | •        |      |  |
|                        | Auto Select Channel         |          |      |  |
|                        |                             |          |      |  |
|                        |                             |          |      |  |
|                        |                             |          |      |  |
|                        |                             |          |      |  |
|                        |                             | Previous | Next |  |

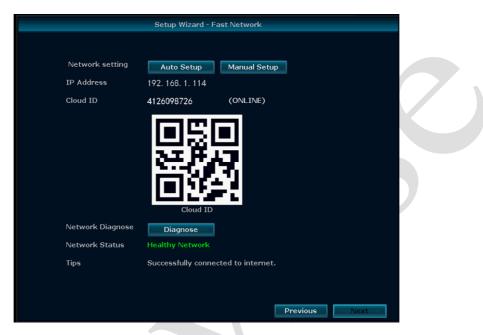

Wireless Setup allows you to select a least-interfered WiFi channel for the NVR, ensures its performance not affected by other WiFi devices. Click "**Auto Select Channel**", the NVR will automatically select a WiFi channel with least WiFi interference.

## 6.1.3 Wireless Internet

|  |                | Apply Previou        | Is Next |

Wireless Internet allows you to connect NVR to Internet wirelessly over WiFi. No need to hardwire NVR to router any more. Select the network WiFi name and enter the WiFi password, NVR will connect to your network wirelessly. **NOTE:** For remote access, you can either hardwire NVR to router using included network cable, or connect NVR to router wirelessly over WiFi.

#### 6.1.4 Fast Network

Fast Network allows user to connect the NVR to Internet for remote access. Users can either check DHCP to allow NVR obtain IP address from router automatically, or manually set an IP address for the NVR.

#### Auto Setup:

Click Auto Setup, NVR will obtain IP address from router automatically and connect to Internet. Once the Device ID shows Online and Network Status shows Healthy Network, your NVR is connected to Internet and is available for remote access.

#### **Manual Setup:**

Click Manual Setup, you'll be directed to below Network setting interface, where allows you to set an IP address for the NVR, as well as other network parameters. To setup NVR network settings manually, you need to uncheck DHCP first. Remember to click Apply or OK to save the settings.

### 6.1.5 Storage Manage

It displays information of current hard drive installed, including the hard drive model, capacity, used and status. It allows you to reformat your hard drive.

#### Hard drive needs to be formatted to start recording.

To format the hard drive, select it and click "Format". It will take some seconds to format the hard drive.

When hard drive is successfully formatted, the status will show 'Formatted'. (You will lose all data on the hard drive if you format it. So please make sure to back up the data before formatting your hard drive.)

#### 6.1.6 Install the Mobile App

The WallPixel mobile app lets you access your NVR remotely with live viewing from your tablet or smartphone. Download our free WallPixel application from Apple Store or Google Play. You can also scan QR code below to download our free mobile app.

Once you have installed the WallPixel app on your smart device and connected your NVR to router, you can add the NVR to your app for remote access. Open your app, create an account and login, tap + and select **Scan**, then scan above **Cloud ID** QR Code to add the NVR to your app.

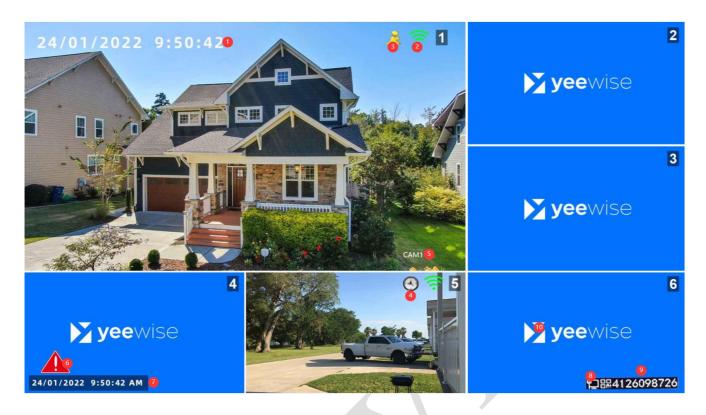

**NOTE:** In order to view your system remotely, your NVR must be connected to the Internet.

## **6.2** Live View (Login and Icons)

This section will discuss the Live View status icons and how to control and manage your NVR using the channel toolbar and mouse menu.

#### 6.2.1 Live View (All Channels)

After you have completed the Setup Wizard for your NVR, you will see the Live View screen. Live View is the default display mode of the NVR. It is the screen you will use to watch live video feed from your NVR cameras and make select adjustments.

- 1. Date and Time: Displays the date and time of your camera.
- 2. Signal Strength: Shows the signal strength of the camera.
- 3. Motion Recording Icon: Indicates motion detection recording on that camera.
- 4. **Time Scheduled Recording Icon:** Indicates time scheduled recording on that camera. It shows the same if NVR is set to 24/7 continuous recording on that camera.
- 5. Camera Name OSD: Shows the camera name.
- 6. **System Exception Icon**: Indicates that an alarm event or exception has occurred. Click the icon to access the Alarm/Exception Information log where you can find specific details about the event.
- 7. Date and Time: Shows the date and time of your NVR.
- 8. Network Status: Shows network status of this NVR.
- 9. Cloud ID: Shows Cloud ID of your NVR. Cloud ID is used for remote access. Add your NVR to any smart devices by using this Cloud ID will allow you to remote access your cameras.
- 10. Yeewise Logo: Shows empty channels without a camera connected.

### 6.2.2 Right Click Menu (NVR Main Menu)

Right click your mouse to pop out the NVR main menu.

- 1. Windows: Select a multi-screen viewing option, where you'll be able to see multiple video feeds at once.
- 2. Camera Manage: Manage the connected cameras.
- 3. System setting: Opens the system setting menu, allows you to do some basic settings of the system.
- 4. **Video Playback**: Opens the Video Playback menu. You can playback recorded videos based on your search conditions here.
- 5. Video Backup: Opens the Video Backup menu. You can backup recorded videos with USB flash drive here.
- 6. Setup Guide: Launches the Setup Wizard.
- 7. Network Status: Check the network connection status.
- 8. WiFi Relay: Open the WiFi relay setup menu.
- 9. Add Cam by wifi: Add new add-on cameras to the system or repair cameras to the system.
- 10. Exit System: Logout/ Reboot/ Shutdown the system.

#### 6.2.3 Channel Toolbar Menu

Click the left button on any camera view in split-screen mode to pop out the channel toolbar menu. Right click to hide the icons.

- 1. Audio: Turn on/off the audio.
- **2.** Zoom: Click to zoom in pictures and right click to exit it. You can scroll the mouse wheels to zoom in/out pictures.
- 3. Color & Light: Opens the Color & Light menu.
- 4. **PTZ Control**: Opens the PTZ Control menu.

### 6.2.3(a) Color & Light

| Hue           | -             | • 32 | Default |  |
|---------------|---------------|------|---------|--|
| Brightness    |               | • 32 | Bright  |  |
| Saturation    |               | • 32 | Soft    |  |
| Contrast      |               | + 32 |         |  |
| Sharpness     |               | + 32 |         |  |
| Light mode    | Infrared mode | -    |         |  |
| Update Succes | 65            | Ok   | Cancel  |  |

- 1. Hue: Changes the color mix of the image.
- 2. Brightness: Changes how light the image appears. This feature does not extend or enhance night vision mode.
- **3. Saturation:** Alters how much color is displayed in the image. The higher the saturation, the more bright and vivid colors will appear.
- 4. Contrast: Increases the difference between the blackest black and the whitest white in the image. Useful if sections of the image are "grayed out". However, setting the contrast too high will degrade the image quality.
- 5. Sharpness: Adjust the sharpness of the image.
- 6. **Default:** Resets the image to its default values.
- 7. Bright: Sets a predefined value to show a brighter image.
- 8. Soft: Sets a predefined value to show a softer image.
- 9. Light mode: Select the night vision mode for the selected camera. Five night vision modes are available.
- 10. Infrared mode: Infrared LEDs turn on at night and camera displays black & white video.
- **11. Daylight:** Infrared LEDs do not turn on at night and camera stays at daylight mode. Do not choose this, otherwise camera won't see anything at night as IR LEDs are off.
- 12. Night: Camera stays at night vision mode, it displays black and white video all the time. Not recommended.
- 13. Full color mode: Floodlights will turn on at night and camera displays full color video at night.
- **14. Smart mode:** Infrared LEDs turn on and camera displays black and white video at night, when motion is detected, floodlights will turn on automatically and camera video switches to full color.

## 6.2.3(b) PTZ Control & Auto Tracking

| PTZ Control Auto | o tracking       |      |
|------------------|------------------|------|
|                  | 🕂 Zoom 📃 Preset  | 0    |
|                  | + Focus -        | Save |
| 🔳 🖪 🕨            | 🕂 Iris 📃         | Goto |
|                  | Tour Start Speed | 6 🔽  |
|                  |                  | Exit |
|                  |                  |      |

- 1. Arrow Keys: Allows you to move the camera up and down, left and right.
- 2. Presets: Enter the number you set for each preset and click Goto, camera will move to the corresponding monitoring position automatically.
- 3. Tour Start: Check to enable camera auto cruise.

| Seconds |            |
|---------|------------|
|         |            |
|         | Apply Exit |

- 1. Motion detection tracking: Check to enable auto tracking of selected camera.
- **2. Home Point:** Check to enable the Home Point of the selected camera. Once checked, camera will automatically return to its home point(guard point) when auto tracking is complete.
- 3. Auto Return Time: Set the auto return time for the camera.

## 6.2.4 Login/ Logout / Reboot/ Shutdown

#### Login

Anytime you want to configure or adjust your system settings you will be required to log in by entering your username and password. It's important you save your login information, or you won't be able to access your NVR.

| Username          | admin 💌 💌 |  |  |
|-------------------|-----------|--|--|
| Password          |           |  |  |
|                   |           |  |  |
| Remember Password |           |  |  |
|                   | Ok Cancel |  |  |

Default Username: admin

Default Password: empty, means no password, leave it blank

If you forgot your password, please contact Yeewise support to restore it.

#### Logout

If you want to log out while using the system, right click your NVR mouse to pop out NVR main menu, then click "Exit System", and choose "Logout".

If you want the system to auto logout, please go to "System setting" – "General setting", enable the "Auto Logout", click "Apply" to save this setting. System will auto logout if there is no operation within 1 minute. Username and password will be required for next login.

#### Reboot

If you want to reboot the system while using it, right click your NVR mouse to pop out NVR main menu, then click "Exit System", and choose "Reboot". System will reboot immediately.

#### Shutdown

If you want to shut down the system, please right click your NVR mouse to pop out NVR main menu, then click "Exit System", and choose "Shutdown". System will release power and pop out message "Now you can power off the device". Unplug your NVR from power, and the system will shut down completely.

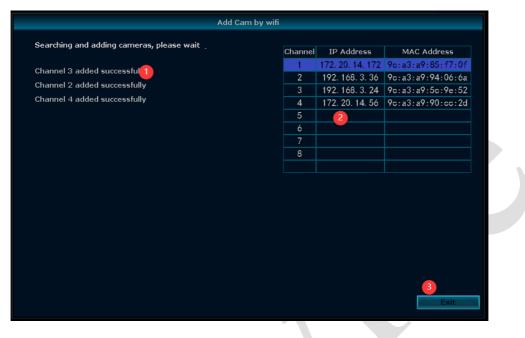

## 6.3 Camera Manage

Manage your cameras' connections with the NVR. In Camera Manage interface, you can add new cameras to NVR, re-pair cameras that lost connection to NVR, delete cameras from their current channels and re-pair, adjust or modify individual camera settings connected to your NVR.

|    | Camera Manage |             |                  |            |           |                |
|----|---------------|-------------|------------------|------------|-----------|----------------|

|    |               |             |                  |            |           |                |

- 1. Protocol: Establishes the protocol used by the NVR when it is looking for cameras to pair with.
- 2. Table 1: Shows the cameras available to pair with the NVR.
- 3. Table 2: Shows the cameras already paired to the NVR.
- 4. Search: Initiates the discovery of cameras over the same network segment where the NVR is connected.
- 5. Match Code: Initiates the discovering and pairing process for available wireless cameras.
- 6. Add One: Pair cameras in Table 1 with the NVR one by one and place those cameras in Table 2.
- 7. Modify IP: Allows the network parameters of the cameras in Table 1 to be modified.
- 8. Advance: Allows advanced options to be Enabled or Disabled.
- 9. Delete: Will delete the selected camera from Table 2 and move it to Table 1.
- Delete All: Will delete all cameras from Table 2 and move them to table 1.
   Manual Edit: Allows the channel connection parameters of the cameras in Table 2 to be modified.
- 12. CH Setting: Direct you to CH Setting interface.
- 13. WiFi Setting: Direct you to WiFi Setting interface.
- 14. WiFi Relay: Opens a window which allows you to set up the Wi-Fi Relay, using the cameras as repeaters of the Wi-Fi signal.
- 15. Arrows: Allows you to move the selected camera to a different channel.

### 6.3.1 Match Code (Wireless Add)

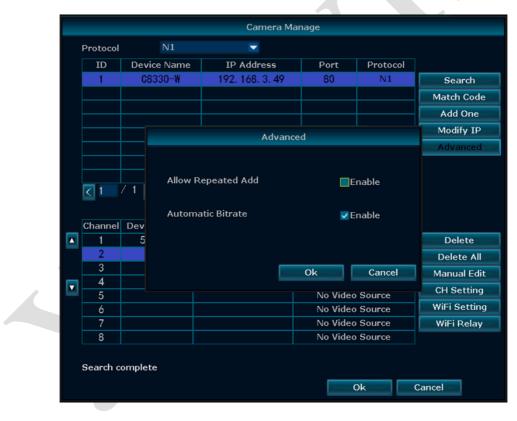

- 1. Number of Cameras Connected: Shows the number of cameras paired to the NVR.
- 2. Camera Table: Shows the IP Address and MAC Address of all the cameras already paired to the NVR.
- 3. Exit: Return you to the Camera Manage interface.

#### 6.3.2 Modify IP

- 1. IPCam Model: Shows the protocol of the camera.
- 2. IP Address: Network address of the connected camera.
- **3. Subnet Mask:** The range of IP addresses that can be found in the network. This should always be set to the default address 255.255.255.0.
- 4. MAC Address: The unique identifier assigned to the network interface of the camera for communications at the data link layer.
- **5. Port:** Allows access to your camera with your computer through your LAN or the Internet. The default value is 80.
- 6. Version: Shows the firmware version of the camera.
- 7. Username: Shows the username of the credentials needed to establish a connection with the camera. By default, admin.
- **8. Password:** Shows the password of the credentials needed to establish a connection with the camera. By default, password field should be empty.

#### 6.3.3 Advanced

- 1. Allow Repeated Add: Allows you to keep the cameras in Table 2 in Table 1 as well.
- 2. Automatic Bitrate: Allows for automatic bitrate of the cameras.

#### 6.3.4 Manual Edit

- 1. Channel: Select the channel/camera you want to edit.
- 2. Protocol: Shows the protocol of the selected channel/camera. N1 (Yeewise), ONVIF (Standard).
- 3. IP Address: Network address of the connected camera.
- **4. Port:** Allows access to your camera with your computer through your LAN or the Internet. The default value is 80.
- 5. Enable: Will Enable (turn on) and Disable (turn off) the camera video stream.
- 6. MAC Address: The unique identifier assigned to the network interface of the camera for communications at the data link layer.
- 7. Username: Shows the username of the credentials needed to establish a connection with the camera. By default, admin.
- 8. Preview Stratage: Used for live view. If the signal of the connected camera to the NVR is not strong enough to sustain a decent quality image, this function can adjust the mainstream transmission to improve video quality.
- **9. Password:** Shows the password of the credentials needed to establish a connection with the camera. By default, password field should be empty.
- 10. Flip Vertical: Will invert the video image vertically from the selected channel/camera.
- 11. Flip Horizontal: Will invert the video image horizontally from the selected channel/camera.
- 12. Reboot: Reestablish the video image from the selected channel/camera.

#### 6.3.5 WiFi Relay (Repeater)

| WiFi Relay     |  |        |
|----------------|--|--------|
| NVR GH2-Auto + | ✓ Auto WiFi Ro<br>Connection info<br>Channel<br>CH1<br>CH2<br>CH3<br>CH3 |        |
| Refresh Apply  | Ok (   | Cancel |

- 1. **Diagram:** Shows the dependency of the Wi-Fi signal for each camera connected. What is shown in the above diagram is CH2 and CH4 connected directly to the NVR, CH1 connected in Daisy Chain to CH4 where CH4 works also as a repeater and CH3 connected in Daisy Chain to CH1 where CH1 works also as a repeater.
- 2. Auto WiFi Relay: When a camera is having weak WiFi signal. It shall come in and out frequently. Such a camera will automatically find a close-by camera as WiFi repeater, connect to that camera, thus to relay back to the NVR. It is checked by default.
- 3. Table: Shows the signal strength of each connected camera.
- 4. Refresh: Will update the diagram with any changes made.
- 5. Apply: Will save any changes made and stay.
- 6. OK: Will save any changes made and exit.
- 7. Cancel: Will not save the changes made and exit.

## **6.4** Video Playback

- 1. Video Image: Shows an image of the cameras that have video for the search parameters entered.
- 2. Date: Allows you to search by date.
- 3. Channel: Allows you to search certain channels.
- 4. Time/Motion: Allows you to search for Time Scheduled or Motion recordings.
- 5. Search: Activates the search based on the criteria established above and shows the recordings found on the table below.
- 6. Table: Shows the video list based on your search conditions.
- 7. File Playback: Allows you to focus in on the video recording selected in the table above and control the recording.
- 8. Backup: Allows you to export a recording onto a USB flash drive.
- **9. AI Playback:** AI playback allows you to playback all human detection videos. The system differentiates human detection videos from other motion detection videos and allows you to playback all human detection videos through AI Playback, thus you can quickly & easily replay the important videos.
- 10. Day/Hour: Allows you to switch the timeline between a day or hour scale.

- 11. Timeline: Shows the presence of a video recording and shows the progress of the video.
- 12. Controls: Allows you to control (rewind, fast-forward, pause, play, etc.) a video.
- 13. Exit: Click to exit video backup.

## 6.5 Video Backup

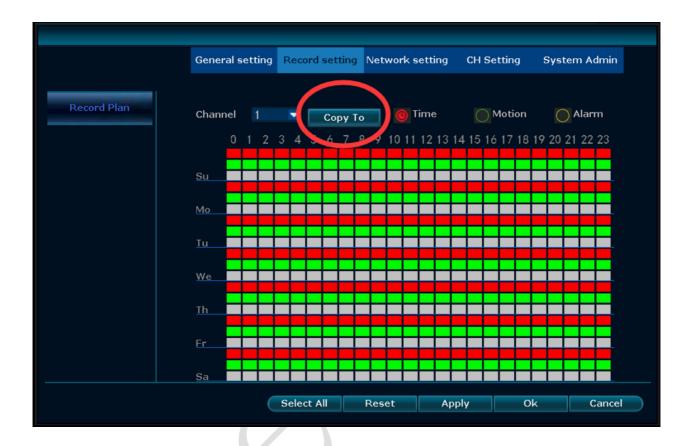

Search and backup all recorded videos from this menu. Choose your desired date and times from the options below, then click *Search* to view recorded videos. Right click to exit back to the live view mode.

|      |          |        | Vide           | o Backup   |          |      |        |

- 1. Channel: Select which channel(s) to search for recordings.
- 2. Record Mode: Select which recording type to search for. Choose Time scheduled, Motion or both.
- 3. Time: Set a date and time range to search for recordings.
- 4. USB: Shows the USB flash drive you inserted to the NVR.
- 5. Search: Click to locate all videos based on your search conditions.
- 6. Format: Allows you to format your USB flash drive. Once you click Format, the USB flash drive inserted to the NVR will be formatted and all files stored in the USB flash drive will be deleted.
- 7. Table: Shows all the recordings found with current search parameters.
- 8. Backup: Click to export and backup a recording located in the table to USB flash drive.

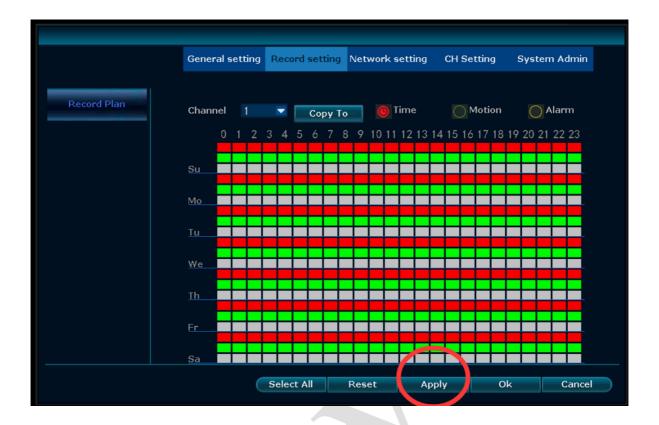

**NOTE:** Remember to insert a USB flash drive to the NVR to backup videos. The backup videos are in .avi format.

# **Chapter 7:** Menus and Settings

Some menu screens will allow you to copy similar settings to multiple channels. Choose the channel you would like to copy information from in the first drop-down box, then click **Copy To**, select the channel you would like to copy the information to, click **OK**.

**NOTE:** Be sure to click **Apply** to save all changes you make in the menus. If you do not save the changes, they will not be applied. You can also select the Reset button on any page to restore default settings for those parameters.

#### Menu

The main menu lets you access many of your NVR's great features. You can customize camera names, keep track of recent events, create recording schedules, configure advanced motion detection settings, check up on the hard drive's condition and change other NVR settings.

- **1. General Setting:** Will allow access to General Setting, Time Setting, HDD Setting, and Error Setting submenus.
- 2. Record Setting: Will provide access to Record Settings.
- **3.** Network Setting: Will provide access to Network Setting, DDNS, E-mail, WiFi Setting, PPPOE, and Wireless Internet submenus.
- **4. CH Setting:** Will provide access to Encode Setting, PTZ Setting, Channel OSD, Video Detection, IPC Maintenance, and Bitrate submenus.
- **5.** System Admin: Will allow access to System Version, System Log, User, System Upgrade, System Maintenance, and Factory Default submenus.

# 7.1 General Setting

The general setting allows you to do some basic settings for your NVR system.

#### 7.1.1 General Setting

|                 |                             |           |              | Арр  | ly        | Ok        | Cancel    |
|                 |                             |           |              |      |           |           |           |

- 1. Language: Select your system language.
- **2. Display Resolution:** Optimize the display resolution to best fit your TV/monitor. By default, the optimal resolution will be auto-selected by the NVR.
- 3. Auto Logout: Enable or Disable auto logout. If Disabled, the NVR will remain logged in.
- 4. Keyboard sound: Enable/ disable the keyboard sound.
- 5. Keypad Type: Select the keypad type.
- 6. Remote Control ID: Remote Control ID of the system.
- 7. Auto Switch: Adjust the duration each channel is displayed during a sequential view. You can choose between 1 and 300 seconds per channel. To begin the auto-sequence feature, check the Enable box next to Auto Switch. There is also option of x1 View & x4 View for your choice.
- 8. OSD Transparency: Adjust the transparency of OSD.
- 9. Volume: Adjust the volume of system.
- **10. Show Cloud ID on Screen:** Enable to allow Cloud ID show at the bottom right corner of your screen, Disable to not allow.
- 11. Show Time on Screen: Enable to allow system time show on the screen, Disable to not allow.

## 7.1.2 Time Setting

The Time Setting will allow you to set the date format, time zone and time format. You may choose to use Network Time Protocol (NTP) to auto-configure the current date and time. To use NTP, check the Enable box next to Sync Time, then click Apply.

HDD Setting List of all the hard drives, including their characteristics, installed on the NVR.

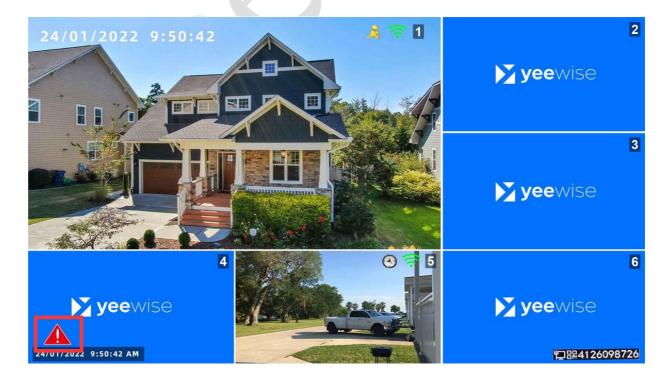

**Format:** Reformats the HDD, erasing all stored recordings. If the HDD is malfunctioning, a reformat is recommended before replacement.

**Overwrite:** Old footage is automatically recorded over when the HDD becomes full. Overwrite is selected by default.

# 7.1.4 Error Setting

Error Setting will allow you to set the alarm type when there is exception happened on the NVR.

The system exception icon is shown at the left bottom of the monitor that is connected to NVR.

- 1. Alarm Icon: Enable it will have the alarm icon displayed on the bottom left corner of live view screen when there is system error happened.
- 2. Error Type: It displays some error types of the system. You can choose the error type from drop down list and check Enable to allow the alarm icon displayed on the live view screen when the selected error type occurs.
- 3. NVR Buzzer: Check to allow the NVR to sound a buzzer when the error occurs.
- 4. Email Notification: Check to allow the system to send you an email when the error occurs.

## 7.2 Record Setting

The Recording Setting allows you to set up the recording type of the system.

- 1. Channel: Choose which channel to edit.
- 2. Copy To: Allows you to copy the configuration for one channel to another.
- **3.** Time: Enable the selection of the time-scheduled recording in the time diagram. If 24 hours and 7 days are selected, then system is set to 24/7 continuous recording. Time-scheduled recording is shown in red.
- **4. Motion:** Enable the selection of the motion recording in the time diagram. Motion recording is shown in green.
- 5. Alarm: Enable the selection of the alarm recording in the time diagram. Since the system does not come

with sensors and alarms in the package, so this recording type does not work for this system.

**6. Time Diagram:** Shows a diagram (hours of the day x day of the week). Use this diagram to apply motion recordings and/or time scheduled recordings during specified periods.

## 7.3 Network Setting

Find network values and optimize connectivity based on your Internet connection. In most cases the values should populate automatically once your NVR is connected to the Internet. The

values in this section should only be adjusted if you are an advanced user and have extensive experience in device networking.

#### 7.3.1 Network setting

|                   |                       |           |           |        |            |              |

- 1. **DHCP:** Network configuration mode that gathers the network values automatically from DHCP server. If unchecked this value can be set manually.
- Cloud ID: The unique Cloud ID number of this NVR. It is used for remote access from your smart devices. Click Show QR Code to display the QR code that represents the Device ID. You can scan this when performing a QR code setup to add this NVR to the WallPixel App.
- 3. IP Address: Network address of the connected NVR.
- **4. Subnet Mask:** The range of IP addresses that can be found in the network. This should always be set to the default address 255.255.255.0.

- **5. Gateway:** The connection between two networks. This should always be the IP address of the connected router.
- 6. MAC Address: The unique identifier assigned to network interfaces for communications at the data link layer.
- 7. Preferred DNS: Domain Name System server address.
- **8.** Web Port: Allows access to your NVR with your computer through your LAN or the Internet. The default value is 80.
- **9. MTU:** MTU is the abbreviation for Maximum Transmission Unit. The MTU size simply determines the maximum packet size that can be transmitted over the network.
- 10. Network Bandwidth: Defines channel capacity, or the maximum throughput of the network interface.
- **11. Network Service:** Allows you to Enable or Disable the network services including RTSP Server, Alexa and Chromecast.
- 12. Network Status: Shows status of the network connectivity.

#### **Network Service**

Our Yeewise systems work with Alexa Echo Show. Enable it in NVR and set it up on your Alexa, you can then command your Alexa to show the cameras.

- 1. WiFi Version: Shows the system's WiFi version.
- **2. BSSID:** BSSID of NVR.
- **3. ESSID:** ESSID of NVR. Do not modify it.
- 4. **Password:** NVR's WiFi password.
- 5. WiFi Channel: WiFi Channel of NVR. You can change it from drop-down list. As the hub for all cameras, the NVR's WiFi performance is crucial. To select a least-interfered WiFi channel for the NVR, ensures its performance not affected by other WiFi devices.
- 6. Region: Select the WiFi region for your NVR from drop-down list. Default value is recommended.
- 7. Broadcast ESSID: Enable or Disable it. Default is recommended.
- 8. Connect Information: Lists all of the MAC addresses for connected cameras and their signal strength.
- **9.** Auto Select Channel: Click Auto Select Channel, the NVR will automatically select a WiFi channel with least WiFi interference.

- 1. **PPPoE Function:** Check to enable and uncheck to disable it.
- 2. Username: Username of PPPoE.
- 3. Password: Password of PPPoE.
- 4. **PPPoE Status:** PPPoE status of the NVR.
- 5. **PPPoE IP:** PPPoE IP address of the NVR.

#### 7.3.6 Wireless Internet

Wireless Internet will allow you to connect the NVR to your home network wirelessly over WiFi. No need to hardwire the NVR to your home router any more. This gives you more flexibility of NVR placement.

|                 |                 |                |       | Ar          | ply  | Ok       |          | ancel |

- 1. Channel: Select which channel to edit.
- 2. Encode Mode: Choose the stream mode: AV Stream or Video Stream Only.
- 3. Bitrate Mode: Bitrate mode of the selected channel.
- **4. Resolution:** Choose a resolution based on your TV or monitor capabilities. Resolution by default is 1080p (1920 x 1080).
- 5. Bitrate: Adjusts the amount of data transferred while streaming. The default setting is sufficient for most networks.
- 6. Main Stream/Sub Stream: Sub stream values are set for an image with less bandwidth consumption (less resolution and limited rate).

## 7.4.2 PTZ setting

|                 | General setti    | ng Record setting | Network setting | CH Setting           | System Admin |

- 1. Channel: Select the channel you want to set PTZ.
- 2. **Protocol:** Shows the PTZ protocol.
- 3. Tour position list: List the presets you've set for selected channe/camera.
- **4. Preset:** Move the camera to a wanted monitoring position and set a number for this Preset, then click Add. This monitoring position(preset) is added successfully. Click ? to go to PTZ Control interface.
- 5. Keep time: Set a time for the preset, like how long you want the camera to stay at this preset before tour to next preset.
- 6. Add: Allows you to add presets.
- 7. Remove: Allows you to remove presets.

## 7.4.2(a) PTZ Control

- 1. Arrow Keys: Allows you to move the camera up and down, left and right.
- **2. Presets:** Enter the number you set for each preset and click Goto, camera will move to the corresponding monitoring position automatically.
- 3. Tour Start: Check to enable camera auto cruise.

#### 7.4.2(b) Auto Tracking

| PTZ Control        | Auto tracking    |   |         |      |
|--------------------|------------------|---|---------|------|
| <b>⊻</b> Motion de | tection tracking |   |         |      |
| Home Poi           | nt               | 1 |         |      |
| Auto Return        | Time             | 5 | Seconds |      |
|                    |                  |   | Apply   | Exit |

- 1. Motion detection tracking: Check to enable auto tracking of selected camera.
- **2. Home Point:** Check to enable the Home Point of the selected camera. Once checked, camera will automatically return to its home point(guard point) when auto tracking is complete.
- 3. Auto Return Time: Set the auto return time for the camera.

|                 |                  |                |                 |               |              |

- 1. Channel: Allows you to select which channel/camera to modify.
- 2. Camera Title: Shows the current name and allows you to edit the name of the selected camera.
- 3. Connection Status: Enable or Disable the camera connection status.
- 4. Color & Light: Will direct you to Color & Light interface, which allows you to modify video image settings for the selected camera.

# 7.4.3(a) Light & Color

- 1. Hue: Changes the color mix of the image.
- **2. Brightness:** Changes how light the image appears. This feature does not extend or enhance night vision mode.
- **3.** Saturation: Alters how much color is displayed in the image. The higher the saturation, the more bright and vivid colors will appear.
- 4. Contrast: Increases the difference between the blackest black and the whitest white in the image. Useful if sections of the image are "grayed out". However, setting the contrast too high will degrade the image quality.
- 5. Sharpness: Adjust the sharpness of the image.
- 6. Default: Resets the image to its default values.
- 7. Bright: Sets a predefined value to show a brighter image.
- 8. Soft: Sets a predefined value to show a softer image.

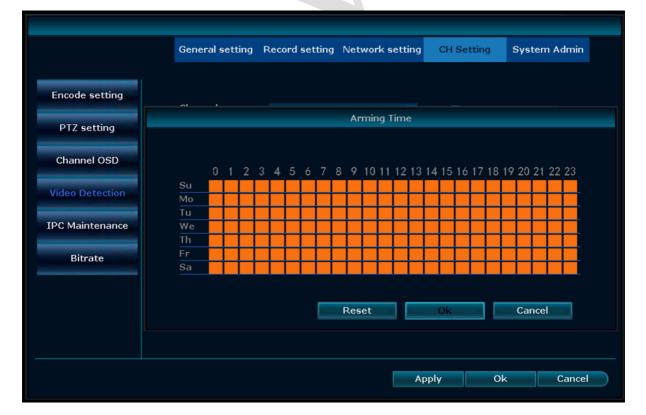

Light mode: Select the night vision mode for the selected camera. Five night vision modes are available.

- 1. Infrared mode: Infrared LEDs turn on at night and camera displays black & white video.
- 2. Daylight: Infrared LEDs do not turn on at night and camera stays at daylight mode. Do not choose this, otherwise camera won't see anything at night as IR LEDs are off.
- 3. Night: Camera stays at night vision mode, it displays black and white video at daytime. Not recommended.
- 4. Full color mode: Floodlights will turn on at night and camera displays full color video at night.
- 5. Smart mode: Infrared LEDs turn on and camera displays black and white video at night, when motion is detected, floodlights will turn on automatically and camera video switches to full color.

#### 7.4.4 Video Detection

- **1.** Channel: Select the channel for which you want to adjust motion alarm settings. Check Enable next to channel to enable motion alarm.
- 2. Detection: Select the detection type from drop-down list.
- **3.** Sensitivity: Adjust the sensitivity of the motion sensor for the channel selected. A lower setting will require more movement in the camera range to trigger motion.
- 4. Alarm Duration: Set the alarm duration time for the selected channel.
- 5. Humanbody: Check to enable human detection.
- **6. Bodyregion:** Check to highlight human in the picture/video. Check Bodyregion, the person in the picture will be framed with a red box.
- 7. NVR Buzzer: Enable or Disable the NVR buzzer on motion detection.
- 8. Email Notification: Enable or Disable the email notifications being sent to your email account.
- 9. APP Notification: Enable or Disable the push notifications being sent to your smart device.
- 10. IPC Siren: Enable or Disable the loud siren sounded by the camera when motion is detected.
- 11. Full Screen: If checked, NVR will switch that channel to full screen automatically when motion is detected.
- 12. Copy To: Allows you to copy settings of current channel to other channels.
- 13. Arming Time: Click to schedule the motion detection time of selected channel.
- **14.** Area Edit: Area Setup will allow you to configure the motion detection area. Blue boxes denote areas that will detect motion whereas uncolored boxes denote areas that will not detect motion. When finished, right click to return to the menu.

#### 7.4.4 (a) Arming Time Schedule

**1. Time Diagram:** Shows a diagram (hours of the day x day of the week). Use this diagram to schedule the arming time.

## 7.4.4 (b) Area Setup

- 1. **Instructions:** A series of instructions on how to set the motion detection area. Blue boxes denote areas that will detect motion whereas uncolored boxes denote areas that will not detect motion. When finished, right click to return to the menu and click Apply to save changes.
- 2. Select All: Selects the entire screen for motion detection.
- 3. Clear All: Deselects the entire screen and prevents motion alerts/recordings from being triggered.
- 4. Return: Returns to the Video Detection submenu.

#### 7.4.5 IPC Maintenance

IPC maintenance will allow you to check your cameras' firmware version and upgrade them.

- 4. Online Upgrade: Upgrade NVR firmware online. Your NVR must be connected to Internet.

#### How to upgrade NVR through USB:

- 1. Copy and save the new firmware to your USB flash drive's root category. Do not put it in any folder.
- 2. Plug the USB flash drive to one of NVR's USB ports.
- 3. Go to System setting > System Admin > System Upgrade. Click Local Upgrade. Wait for the NVR to upgrade. It may take a few minutes.

# 7.5.5 System Maintenance

- 1. **Simple Restore:** Simple restore the NVR to factory default.
- 2. Important Configuration: Import configurations for the NVR.
- 3. Export Configuration: Export configurations of the NVR.

# **Chapter 8:** Mobile View Setup

Basic setup and troubleshooting for the WallPixel Mobile App.

# 8.1 Initial Setup

## 8.1.1 Downloading the WallPixel App

Go to the Google Play Store (Android) or App Store (iOS) to download and install the WallPixel App on your Smart Device.

**NOTE:** Before you continue with the initial setup of the Night Owl Connect App and product pairing, ensure that your Wi-Fi router is transmitting signals at 2.4Ghz band. Currently, some products are not compatible with Wi-Fi signals of 5Ghz or above.

## 8.1.2 Creating an Account & Log In

1. Tap the app to open it. You must agree to the terms and conditions to use the App. Tap "Agree" to continue.

5. Congratulations! Your WallPixel account has been successfully created. You can now login the app to add your device.

#### **NOTE:** If you do not remember your password, tap "Forget Password" to retrieve your password.

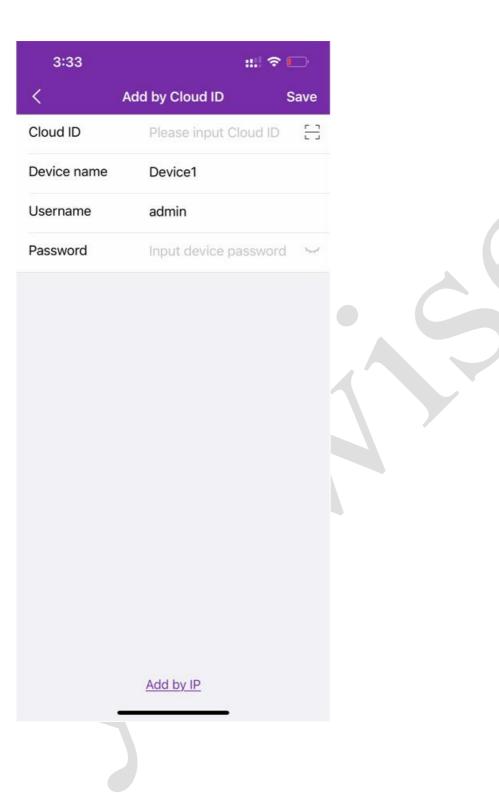

## 8.1.3 Adding a Device

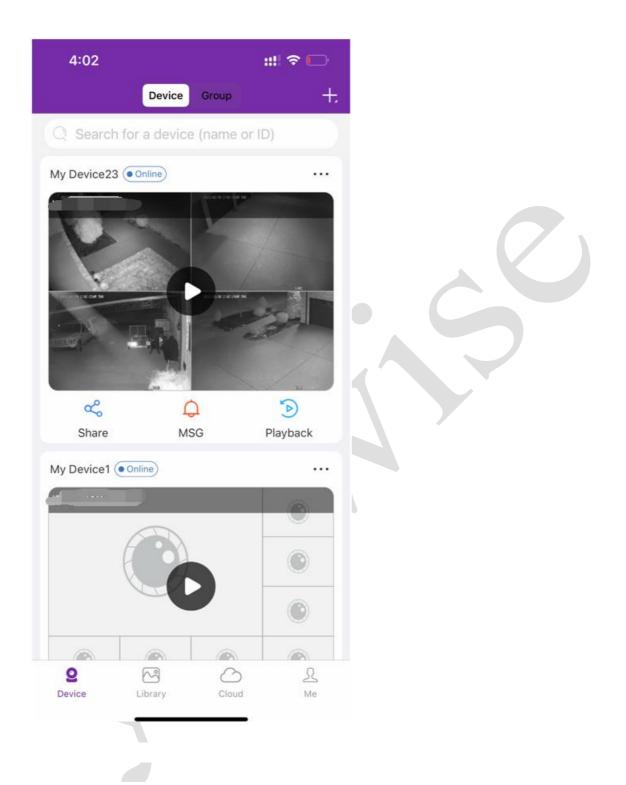

Before proceeding, please ensure that your NVR(Recorder) is connected to the Internet. Once connected, please follow the steps below:

- 1. Please log in to the App and tap "Add smart device".
- 2. Tap "WiFi Camera Kit with NVR" to add your system. Read the tips and make sure that you've finished above, then click "DONE" to proceed.

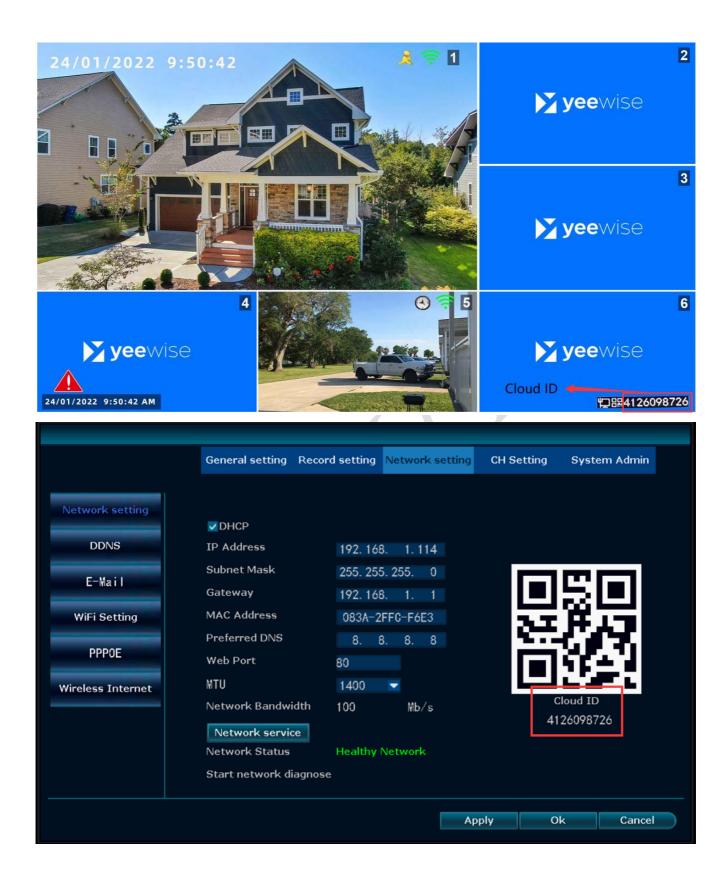

3. Input Cloud ID, name your device and enter the password used to log in to your NVR(Recorder). Tap "Save" to complete this process and begin live viewing your cameras.

**NOTE:** Cloud ID can be found at the right bottom of the monitor that connects to the NVR, or in Network Setting interface. And the password is your NVR's (Recorder's) password, not the App password.

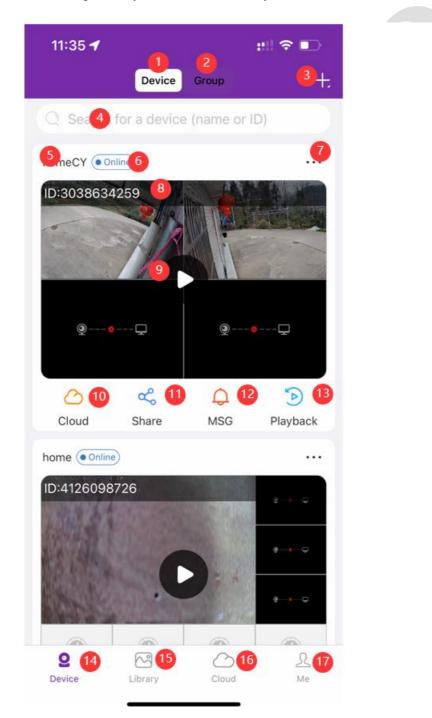

# 8.2 Live View

You can live view your camera's feed with the WallPixel App. Below is a brief overview of the live view screen and features.

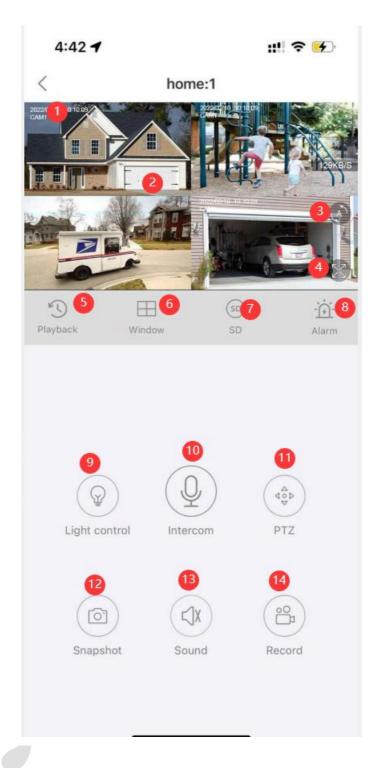

#### **NOTE:** Your device must be connected to the Internet and show **Online** for live view.

1. From the App's main screen, tap the Play button for the device you want to live view.

1. Device: Shows a list of the devices you added to your app account.

- 2. Group: Group your cameras from different systems.
- 3. Add Device: Tap to add new device to your app.
- 4. Search your device: Search your device by name or cloud ID.
- 5. Device Name: Shows the device name.
- 6. Device Status: Shows the device status: Online or Offline. If your device is online, then you can remote access the cameras, while if it shows offline, you can't.
- **7. Settings:** Tap to do some basic settings of the device, including Top the device, Enable/Disable Alarm Push, Snapshot/Record, Edit the device and delete it.
- **8.** Cloud ID: Shows the cloud ID of the device.
- 9. **Preview:** Preview of the device.
- 10. Cloud: Takes you to the cloud storage menu.
- 11. Share: Allows you to share your device with your families or friends.
- 12. MSG: Takes you to the app notifications menu.
- 13. Playback: Takes you to the Playback menu for the channel you are viewing.
- 14. Device: Shows a list of the devices you added to this app account.
- 15. Library: Takes you to the snapshots/record menu. You can share or delete photos/videos there.
- 16. Cloud: Takes you to the cloud storage menu.
- 17. Me: Allows you to do some basic settings of the app.
- 2. You should now see your camera's live view.

- 1. Camera Name/Date&Time: Shows the camera name and current date & time.
- 2. Live View Video: Live videos stream from the cameras
- 3. Auto Cruise: Turn on/off auto cruise of the cameras.
- 4. **Full-Screen:** Switch to full-screen display.
- 5. Playback: Takes you to the Playback menu for the channel you are viewing.
- 6. Window: Select a multi-screen viewing option.
- 7. SD: Allows you to switch between HD-Streaming and SD-Streaming.
- 8. Alarm: Turn on/off the camera siren alarm manually.

- 9. Light & Control: Allows you to change the night vision mode. Three night vision modes are available: IR, Floodlight and Auto. IR means Infrared LEDs will turn on at night and camera delivers black and white video. Floodlight means floodlights will turn on at night and camera delivers full color video. Auto means Infrared LEDs turn on at night by default and camera delivers black and white video, but when motion is detected, floodlights will turn on and camera becomes to deliver full color video, thus you can get more details on motion event.
- 10. Intercom: Tap to initiating intercom. Then you can hold to talk to the camera.
- 11. PTZ: Allows you to move the camera left and right, up and down, and set presets for the camera.
- 12. Snapshot: Take a snapshot of the live video and save it to your phone.
- 13. Sound: Turn on/off the speaker feature for audio enabled cameras.
- 14. Record: Record the live video of the camera and save it to phone.
- 3. You can switch the view to landscape mode by turning your Smart Device sideways.

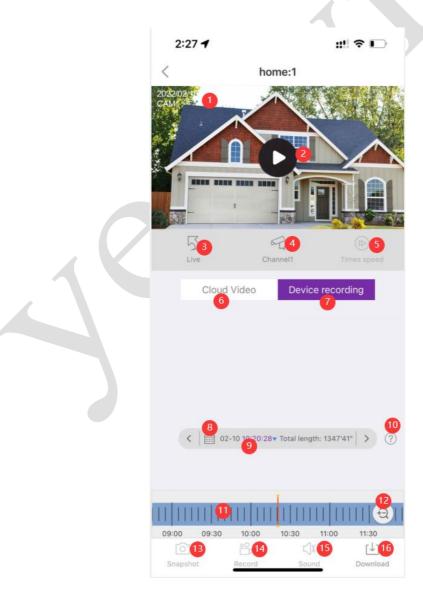

- 1. Camera Name/Date&Time: Shows camera name, current date and time.
- 2. Live Video: Live video of the camera.
- 3. Auto Cruise: Turn on/off auto cruise of the camera.
- 4. Microphone: Tap to initiating intercom. Then you can hold to talk to the camera.
- 5. Light & Control: Takes you to the Light & Control menu.
- 6. Snapshot: Take a snapshot of the camera live view and save it to phone.
- 7. Record: Record the live video of the camera and save it to phone.
- 8. SD: Allows you to switch between HD-Streaming and SD-Streaming.
- 9. Speaker: Turn on/off the speaker feature for audio enabled cameras.

# 8.3 Playback

The Playback menu will allow you to view recordings that have been saved to your system. From within this menu you can also save images and recordings directly to your smart device and share them via text, email or social media.

- 1. Tap the Playback button, you will be directed to the playback interface.
- 2. Tap the Calendar icon to select the date you would like to playback from. Days where a recording was captured by your system will appear with a purple circle.
- 3. Move the red cursor on timeline bar at the bottom to locate the time that you would like the video to replay from. (Use your fingers to drag playback timeline bar to select the accurate time.)
- 4. Tap the play button to start playback videos. The bars in blue represents time-scheduled recordings, bars in red represents motion detection recordings, and bars in grey represents no recordings at the selected time.

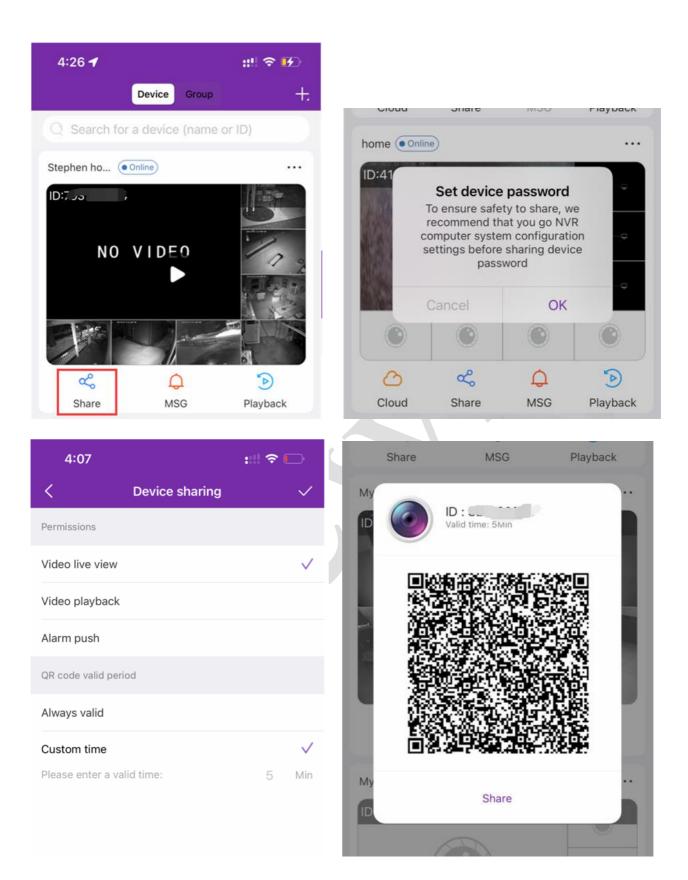

- 1. Camera Name/Date&Time: Shows camera name, current date and time.
- 2. Play: Tap to playback the video.
- 3. Live: Tap to back to live view.
- 4. Channel: Tap to change the channel to playback.
- 5. Times Speed: Multi-time speed playback, only available for cloud recording.
- **6.** Cloud Video: Playback videos stored in the cloud. If you've purchased the cloud storage, then you can playback videos stored in the cloud here.
- 7. Device Recording: Playback videos stored in the hard drive installed in the NVR.
- **8.** Calendar: Tap to choose the date to search videos. Days where a recording was captured by your system will appear with a purple circle. Choose the day that contains the recording you are trying to find.
- 9. Time: Tap to adjust the time to locate the playback videos.
- **10. Help:** Explain what do the colors on the timeline bar represent. The bars in blue represents time scheduled recordings, bars in red represents motion detection recordings and bars in grey represents no recordings at the selected time.
- 11. Timeline Bar: Playback timeline bar. Tap to adjust the time to playback.
- 12. Zoom in/out: Tap to zoom in/out the timeline bar.
- 13. Snapshot: Take snapshots of playback videos.
- 14. Record: Record playback videos.
- 15. Sound: Turn on/off sound of the audio enabled cameras.
- 16. Download: Download recorded videos and save to phone.

# 8.4 Share

## 8.4.1 Share Device

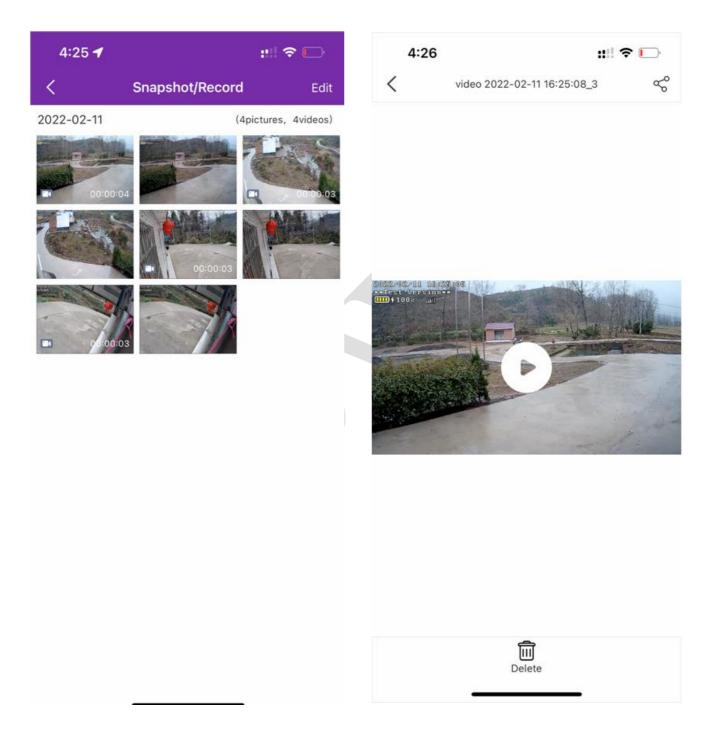

Share your device with your families & friends and authorize them permissions.

- 1. Tap Share under the device. If you did not set a password for your NVR, for security purpose, it will request you to set a password for your NVR before sharing it with others.
- 2. Authorize permissions and set the QR Code valid time period.
- 3. A QR code will pop out, ask your families or friends to scan this QR code to add your device. After that they can view your cameras, playback recorded videos or receive notifications on their phone based on the permissions you authorized.

# 8.4.2 Share Photos & Videos

Share photos, videos and recordings with others. To share a recording, first download it from the Playback menu using the download icon. Then, go to Snapshots/Record menu and use the Share icon to share via text, email or social media.

# 8.5 App Settings

Do some basic settings of your app.

# **Chapter 9:** View Cameras on Computer

This system supports remote viewing your cameras via smartphone and computer from anywhere in the world.

- Supports viewing your cameras on computer via Internet Explorer.
- Supports viewing your cameras on computer via CMS PC Client Software.
- Supports viewing your cameras on smartphone.

# **9.1** View cameras on computer via IE Browser

## 9.1.1 Local Access on IE

When your computer and NVR are connected to the same network, you can view cameras using NVR's IP address.

1. Find out the NVR IP address and port #. IP address and port number can be found at System setting > Network setting.

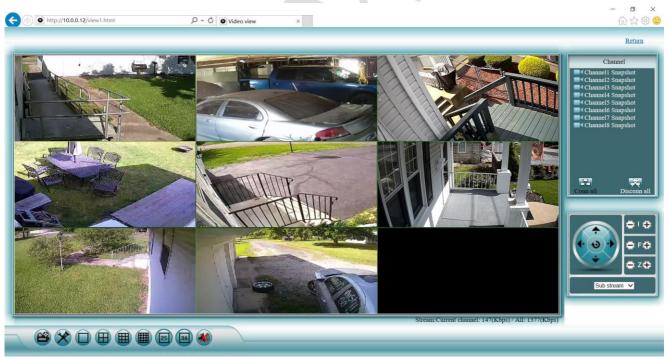

|                   |                       |            |                 | _          |                |

 Enter the NVR's IP address in your IE browser in format http://youripaddress, for example: http://10.0.0.12 (If the default WEB port 80 has been changed e.g. to 100, you'll need to add new port number when input IP address in the browser, for example: <u>http://10.0.0.12:100</u>).

|                      |  | - <b>□</b><br>① ☆ ( |
|----------------------|--|---------------------|
| Network video client |  |                     |
|                      | Username: admin<br>Password:<br>Remember me<br>Login |                     |
| 1                    |  |                     |

X

3. Enter the NVR's login username and password, click Login, you should be able to view the camera videos now.

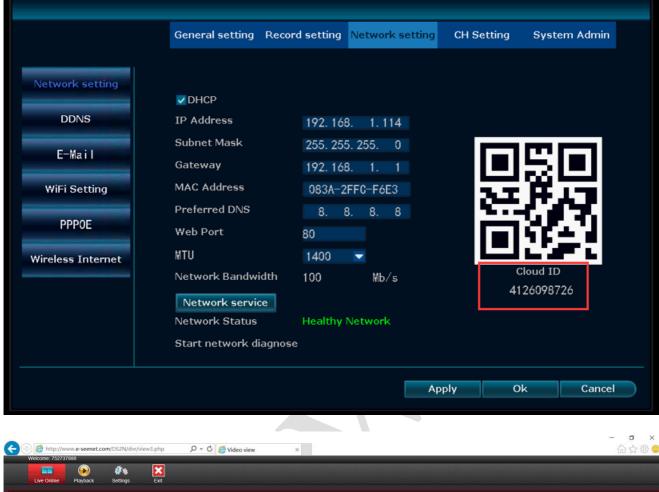

## 9.1.2 Remote Access on IE

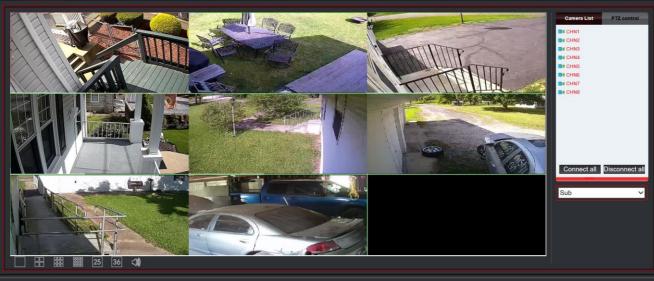

When your PC is out of local area network with the NVR, for example: view your home camera system from your office computer, you need to login below website to view your cameras.

| ttp://www.e-seenet.com/index.php |  | - ■ ×<br>୷☆‡© |
|----------------------------------|--|---------------|
|                                  |  |               |
|                                  | Language 🔻   |               |
|                                  | Cloud ID login Username login Cloud ID: Username Username Password: VSave the log device Login |               |
|                                  | Help   |               |
|                                  |  |               |

- 2. Enter your device Cloud ID, NVR's login username and password, and click Login. You'll then be able to see camera videos on IE browser.
- **Cloud ID**: Cloud ID can be found at the right bottom of your monitor, or in NVR's network setting interface.
- Username: NVR's login username, default is admin.
- Password: NVR's login password, default is empty, leave it blank. If you've set a new password for admin, enter the new password here.

3. If it's 1st time you use it, please download and run the WebClient.exe control follow the pop out message.

**NOTE:** If for the first time use and software cannot load automatically, you'll need to change some ActiveX settings in Internet Explorer. (This will need to be done on every computer you use to access the system.)

Step 1: Click "Tools" - "Internet Options" - "Security" - "Internet" - "Custom Level".

Step 2: Scroll down until you see ACTIVE CONTROLS AND PLUG-INS.

(If you have Internet Explorer 9 or 11, change ALLOW ACTIVE FILTERING TO DISABLE. Other versions of IE will not have this option.)

Step 3: Change below ActiveX controls to prompt, as shown in below image.

Download signed ActiveX controls;

Download unsigned ActiveX controls;

Initialize and script ActiveX controls not marked as safe for scripting.

| Internet Options  | ?      | ×    |                           | Internet Op  | tions  | ?     | X  |

# 9.2 View Cameras on Computer via CMS

CMS is called Camera Monitor System. It is a camera monitoring client for online preview image, video storage, remote playback, device management, video/screen download and other functions. CMS allows you to remotely view your Yeewise products from a PC or Mac.

## 9.2.1 Installation and Operation

 Download the CMS for windows computer. Link: <u>https://www.yeewise.com/downloads/</u>

- 2. Run the Setup.exe installation package.
- 3. Select the language that your system needs to use.

| Please select the language of the installer  English  OK Cancel | Installer La | nguage                                 | $\times$ |  |
|---|--------------|--|----------|--|
|   | 2            | Please select the language of the inst | taller   |  |
| OK Cancel   |              | English                                | $\sim$   |  |
|   |              | OK Cano                                | :el      |  |

4. Read and accept the agreement.

- 5. Select and determine your software installation path.
- 6. After the installation is successful, immediately run and use.

## 9.2.2 User Login

**Login directly with your app account.** Devices added to your app account will be synchronized to the CMS, so you don't need to add device here once again.

The time zone for the first login will be automatically synchronized with the computer. You can modify it in User Parameter > Advanced.

|                              |       | eeCloud Camera Monitoring S  | ystern |
|------------------------------|-------|------------------------------|--------|

| Register   Forget Password?  | 1 636 | Register   Forget Password?  |        |

## 9.2.3 Register an Account

Click "Register" in the login interface, enter the mobile phone number (need to add the mobile phone number area code), click Register Now. Then create a password, confirm password, enter the verification code, and click Register now. Your account is now created.

| Register EseeCloud Account | Register EseeCloud Account   |
|----------------------------|--|
|                            | Please enter password  |
|                            | 6~20 characters  |
| Ω Please enter account     | Please enter password again  |
| Please enter phone number  | 6~20 characters  |
|                            | Please enter captcha         60 Second   |
| Register Now               | Register Now   |
| < User login               | < User login   |
| 11111 1111                 | enter and a second seco |

**NOTICE:** If login with your app account, then both email and phone number are accepted. While if you register a new account, only phone number is accepted.

# 9.2.4 Forgot Password

If you happen to forget your CMS account password, click "Forget Password" in login interface. Then enter the registered phone number to retrieve password.

| Retrieve password         | Retrieve password                  |
|---------------------------|------------------------------------|
|                           | Please enter captcha 59 Second     |
| 15019244007               | ← Please enter 6~20 bit password ~ |
| Please enter phone number | 6~20 characters                    |
|                           | Please enter 6~20 bit password 😽   |
| Confirm                   | 6~20 characters                    |
| < User login              | Finish                             |
| < User login              | < User login                       |
|                           |                                    |

## 9.2.5 Add Device

If you've added the system to your app account, login CMS directly with your app account, your system will be synchronized to CMS. You can then view cameras on CMS without needing to add it.

If you login CMS with another account rather than your app account, you need to manually add your system to CMS. There are three ways:

# 9.2.5(a) Add by IP/DDNS

If add device by IP, you can only view cameras on CMS in local network.

|            |                 |                |                         | Add Device   |
|------------|-----------------|----------------|-------------------------|--------------|
| IP/DDNS    | *IP/DDNS:       |                | Port:                   | 10000        |
| ○ Cloud ID | User Name:      | admin          | Password:               |              |
|            | Area:           | Default Area 🗸 | Device Name:            | My_Device1   |
|            | Туре:           | NVR            | *Number Of<br>Channels: | 1            |
|            | Channel Serial: | 1              | Channel Name:           | My_Device1:1 |
|            | Channel Type:   | Normal         |                         |              |

- 1. IP/DDNS: IP address of your system, can be found in NVR's network setting interface.
- 2. Username: NVR's login username.
- 3. Password: NVR's login password.
- 4. Device Name: Create a name for your system.
- 5. Number Of Channels: The channel number of your system, usually it is 8 channel.
- 6. Channel Name: Create a channel name for your system.

# 9.2.5(b) Add by Cloud ID

|           |                 |              |   |                         | Add Device   |
|-----------|-----------------|--------------|---|-------------------------|--------------|
| ) ip/ddns | *Cloud ID:      |              |   | Port:                   | 10000        |
| Cloud ID  | User Name:      | admin        |   | Password:               |              |
|           | Area:           | Default Area | ~ | Device Name:            | My_Device1   |
|           | Туре:           | NVR          | ~ | *Number Of<br>Channels: | 8            |
|           | Channel Serial: | 1            | ~ | Channel Name:           | My_Device1:1 |
|           | Channel Type:   | Normal       | ~ |                         |              |

- 1. Cloud ID: Cloud ID of your NVR. It can be found in your NVR's network setting interface.
- 2. Username: Your NVR's login username.
- 3. Password: Your NVR's login password.

## 9.2.5(c) Add in LAN

Click "Device Management", then click Refresh. Devices in Lan network will show in the list. Click to select the device you want to add, and click Add. The device will be added to CMS.

| Add [ | Device              |               |         |        |             |        |            |
|-------|---------------------|---------------|---------|--------|-------------|--------|------------|
| LAN A | Add: Enter IP or ID | Q             |         |        |             | Ø      | Cancel Add |
|       | ID                  | IP            | Channel | Device | Device Name | User N | Password   |
|       | 2862658194          | 192.168.1.128 | 9       | NVR    |             | admin  |            |

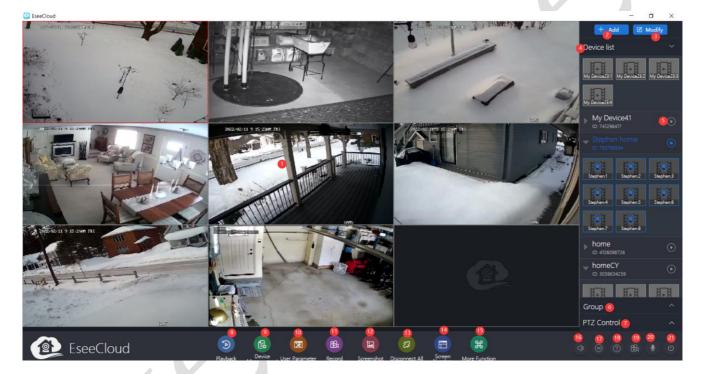

## 9.2.6 Live Preview

### 9.2.6(a) Connection & Disconnection

After the device is added successfully, you can find your device in the device list on the right side of the interface.

**Connect:** Select the device/channel under device list and click the Play to connect the device to view the video. **Disconnect:** Select the device/channel that is playing video, click the Stop button to disconnect.

## 9.2.6(b) Live View Screen & Features

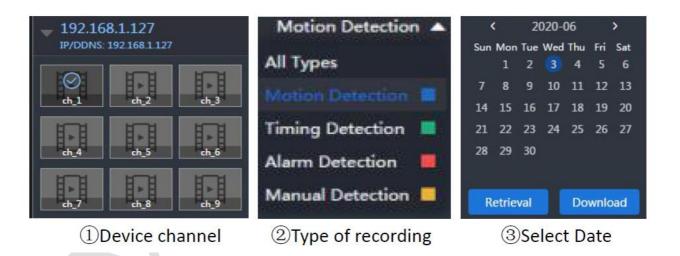

- 1. Live View Video: Live video of the cameras.
- 2. Add: Allows you to add device to the CMS.
- 3. Modify: Allows you to modify device.
- 4. Device list: Show a list of all added devices.
- 5. Play: Tap to connect to cameras and stream videos on screen.
- 6. Group: Group cameras from different systems.
- 7. PTZ Control: Allows you to move cameras left and right, up and down, and set presets for cameras.
- 8. Playback: Takes you to playback interface.
- 9. Device Management: Allows you to manage devices, including add, modify and delete devices.
- 10. User Parameter: Allows you to do some basic and advanced settings of CMS.
- 11. Record: Tap to record live view videos and videos will be saved to computer.
- 12. Screenshot: Tap to take snapshots of live view video and pictures will be saved to computer.
- **13. Disconnect All:** Tap to disconnect all cameras. Once disconnected, cameras will stop streaming videos on screen.
- 14. Screen Number: The CMS provides 1/4/9/16/25/36/49/64 eight kinds of split screen display. It means the

CMS allows you to display up to 64 cameras simultaneously.

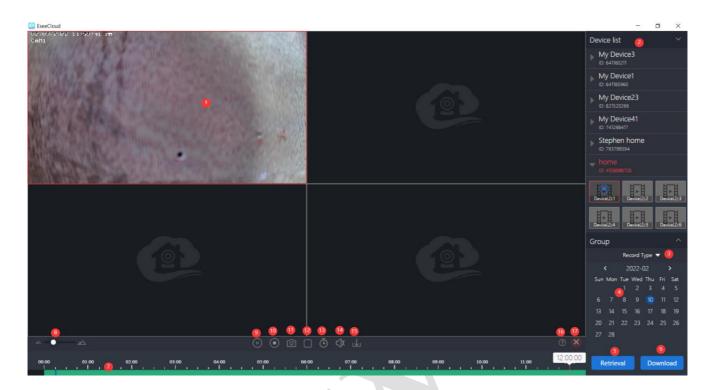

- 15. More Function: Allows you to check snapshots and videos, alarm information and system messages.
- 16. Speaker: Enable or disable sound for audio enabled cameras.
- 17. Video Quality: Allows you to adjust video quality from SD to HD.
- 18. Tips & Help: Gives you some tips about how to use this CMS.
- 19. Record: Tap to record short videos of live view video and save to computer.
- 20. Microphone: Tap to initiating intercom. Then you can talk to the camera.
- **21. Power:** Tap to logout CMS.

## 9.2.7 Video Playback & Features

- 1. Tap Playback to enter the video playback interface.
- 2. Select the device and channel under device list.
- 3. Select the recording type and playback date. (Recording type includes: all types, motion detection, time scheduled, alarm, and manual recording)
- 4. Tap Retrieval to start searching for videos. And soon it will begin to playback videos. You can adjust the playback time on the timeline bar.

#### Playback interface and features.

- 1. Playback Video: Playback video, you can playback 4 channels simultaneously.
- 2. Device list: Show a list of your devices.
- 3. Record Type: Allows you to choose the recording type: Motion, Time Scheduled, Manual and Alarm.
- 4. Calendar: Choose the date to search for videos to playback.
- 5. Retrieval: Tap to start searching for videos to playback based on your search conditions.
- 6. Download: Takes you to the download video list based on your search conditions.
- 7. Timeline bar: Playback timeline bar. You can drag and click on the bar to adjust time to playback.
- **8.** Time Scale Adjustment: Allows you to adjust the timeline scale value during playback, default value is 60 minutes.
- 9. Play/Pause: Tap to play or pause playback video.
- 10. Stop: Tap to stop playback video.
- 11. Snapshot: Allows you to take snapshots while playback videos and save pictures to computer.
- **12. Video synchronization:** When you playback multiple channels at the same time, check "Synchronized" allows you to adjust playback time for all channels at the same time on the single timeline bar.
- **13. Timed Playback:** Tap to enter an exact point in time to start playback.
- 14. Speaker: Turn on/off sound of the audio enabled cameras.
- 15. Download: Takes you to the download video list based on your search conditions

# 9.2.8 Device Management

## 9.2.8(a) Manage Device

You can add device, modify device, clear device, and delete device here.

| Error   | Possible Causes  | Solutions  |  |
|---|--|--|--|
|   | Audio cables are loose or have been disconnected.              | Check the AUDIO connection to the NVR.   |  |
| The image on the NVR appears,<br>but does not have sound. | Audio channels are disable.                                    | Right click in Live View and ensure <b>Volume</b> is enabled.  |  |
|   | Volume on external speakers<br>(not included) is low or off.   | Increase volume on external speakers (not included).   |  |
| A "whirring" noise is coming from the system.             | Fan is active.   | The noise means the exhaust fan is working normal.   |  |
| The system beeps at startup.                              |  | The beep at startup is normal.   |  |
| The system beeps during motion detection.                 | Motion detection is enabled and the alarm buzzer is activated. | Go to the General Menu > Video<br>Alarm, select the channel and<br>turn <b>Audible Warning</b> to off. |  |

#### How to optimize WiFi connection between NVR and cameras?

While using Yeewise WiFi security camera system, customers may experience video freeze, video lag or even "no video" issue. This is typically caused by weak WiFi signal from cameras to the NVR.

Based on 2.4Ghz WiFi, all cameras connect to the NVR's own WiFi, just like your phones/ tablets connect to your home WiFi router.

In line of sight, Yeewise WiFi cameras can be mounted 1000ft (300m) away from the NVR. The camera system handles distance very well. However, like any WiFi devices, the cameras do not handle obstacles very well. Each wall reduces its WiFi strength noticeably.

#### How Obstacles Affect Your Signal Strength

When your wireless signal is transmitted through various materials, such as walls and windows, the signal strength is affected. Though the NVR and wireless camera may be very close in proximity, you could still notice high signal

interference if the signal passes through certain obstacles. For instance, if the signal passes through a concrete wall, it will be severely weakened. Please reference the below chart to see which obstacles highly affect your signal and which do not.

| Concrete Wall<br>Brick Wall<br>Glass with<br>Metal<br>Cinderblock<br>Dry Wall<br>Wood Door | Strong |  |
|--|--------|--|
| Wood Door<br>Glass Window<br>Mirror  | Weak   |  |

Based on the facts, below are some suggestions of how to optimize your cameras' WiFi connection.

### 1. Select a Wi-Fi channel with least interference for your NVR.

As the only hub, the NVR's WiFi performance is crucial. To select a least-interfered WiFi channel for the NVR, ensures its performance not affected by other WiFi devices.

#### This is how to,

In NVR's System setting - Network setting - WiFi setting. Click "Auto Select Channel", the NVR will automatically select a WiFi channel with least WiFi interference.

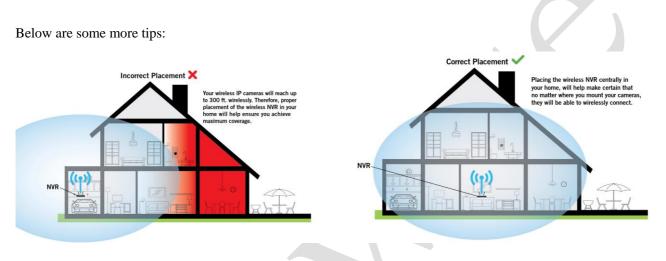

|                   | General setting  | Record setting    | Network se | tting      | CH Setting  | System Ad                  | nin            |

|                   | The channel shou | uld conform to lo |            |            |             |                            |                |
|                   |                  |                   |            | Apply      | , (         | Ok Ca                      | incel          |

#### 2. Place your NVR and cameras reasonably.

The NVR is the only WiFi hub, all cameras are WiFi devices that need to connect to the hub. Centralize the position of the NVR so it reaches all cameras well.

Principle of placing NVR and cameras: avoid any possibly avoidable wall, in the line from NVR to cameras.

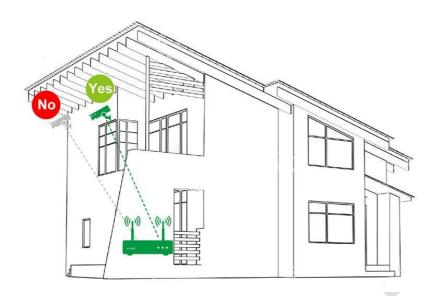

Do not place near high voltage wires or other sources of electrical interference. Electrical interference will degrade the quality of the signal.

If there has to be obstacles between the NVR and camera, adjust the height of camera or NVR to avoid floor. Floors are normally heavier than walls.

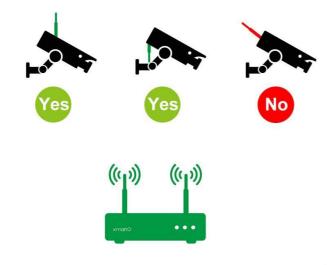

Always find possible open between NVR and camera, mount camera and place NVR's spot accordingly to allow signal to pass.

Metal walls (including metal garage gate) absorb wifi signal. Use extra extendable wifi antenna to bring camera's antenna inside the wall. This also works for heavy concrete wall.

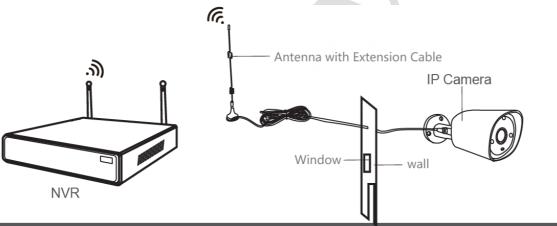

Try to keep camera and NVR's antennas parallel to get better signal pick-up.

#### 3. Bring the camera's antenna through a wall.

If a camera needs to be mounted behind a wall, you may use a WiFi antenna with extension cable to pass the wall. Search "WiFi antenna with extension cable" on retail website like Amazon, you will find a lot of options. Mount the camera behind the wall, drill a hole, wire through the hole to bring the antenna inside the wall.

#### 1. Take advantage of Yeewise Auto WiFi Relay technology.

The Yeewise Auto WiFi Relay technology uses cameras in middle as repeaters. That way, further cameras connect to closer cameras 1st, and then to the NVR as a group.

#### 2. Auto WiFi Relay

| WiFi Relay     |                       |                      |
|----------------|-----------------------|----------------------|
| NVR CH2-Auto + | ✓ Auto WiFi Re        |                      |
|                | Channel<br>CH1<br>CH2 | Signal<br>:51<br>73: |
|                | CH3<br>CH4            | 38:<br>84:           |
|                |                       |                      |
|                |                       |                      |
|                |                       |                      |
| Definet        |                       | Parroal              |
| Refresh Apply  | Ok (                  | Cancel               |

#### 3. Use a WiFi camera repeater.

Add a physical WiFi camera repeater for that camera.

#### 4. Hard Wire Cameras.

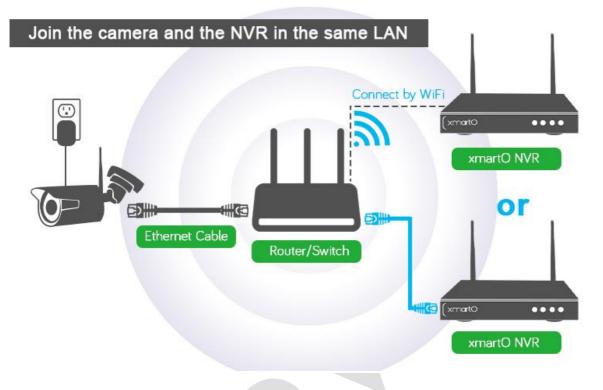

If you cannot get a camera to work via WiFi anyway, you should consider to hard wire that camera, especially when it's PTZ camera.

Here is how to hard wire a camera,

- 1. Plug the camera to power.
- 2. Use a standard CAT5/ CAT6 Ethernet cable to hardwire the camera to your router, or to a switch in your LAN network. (**Camera joins the LAN**)

3. Connect your NVR to your home network. This should have already been done if you've connected your NVR for Internet access. (**NVR joins the LAN**)

Now, the camera and the NVR is in the same LAN network. They can recognize each other.

4. Add the camera to an NVR channel.

a) On the NVR screen, right click your mouse, then click Camera Manage, refresh till you see the camera listed in above box with IP 192.168...(*192 IP means the camera is connected through the cable*). Click the IP to select the camera.

b) Then, in below box select an empty channel. If you are changing a camera from WiFi to Ethernet, you need to delete that channel from below box to get an empty channel.

c) Click "Add One" to add the camera to channel.

|           |             | Camera Ma        | nage                 |          |              |
