

Thank you for choosing EMOJO Electric Bikes, here are some quick steps to help you get started in no time and get the most out of your EMOJO:

## 1

### Fully charge your battery before the first ride.

The typical charging time takes around 5 hours.

a) Locate the charging plug on your battery.

Vertically-mounted battery

Center frame section-mounted battery

b) Connect your charger, the red light on means the battery is charging. The green light on means the battery is fully charged.

## 2

### Turn on your battery.

On some models with a vertically-mounted battery such as Lynx, Crosstown, Hurricane and Breeze you will need to insert the key to turn the switch on.

On models with the battery mounted on the center section of the frame such as Wildcat, Cougar and Prowler, press the button on the battery. No key is required.

## 3

### Turn on your display.

Press and hold the **M** button to turn the system on. Depending on your ebike model, it can have a LED display or LCD display.

LED display

LCD display

## 4

### Select your Pedal Assist level (PAS).

On your display, press the - or + buttons to toggle between levels. The higher the number the more kick you get from the electric motor. *It is highly recommended to start with level 1 if you are a beginner.* Begin pedaling and the motor will automatically engage, you can also use the throttle\* if you do not want to pedal.

\*Battery range will reduce if only throttle is used.

This guide is provided for convenience, however, EMOJO highly recommends to read and understand the user manual thoroughly before operating the ebike.
