

Universal Polypropilene fender installation

Front fender

The front fender is composed by 2 sections. Install the shorter section (a) on the front and the longer section (b) at the back as the picture shows.

Rear fender

On some models including EMOJO LYNX there are 2 ways to install the rear fender:

1-Mounted on the seat pole. Attach the round clamp end to the sea pole and the other end to the fender using the provided screws.

2-Mounded on the frame. Fix the fender to the frame rear end crossbar.

Other models such as EMOJO WILDCAT only allow seat pole mounting for this sort of fenders.
